Regional Connector Transit Corridor
Final Environmental Impact Statement/ Final Environmental Impact Report

VOLUME F-2

RESPONSES TO COMMENTS ON THE DRAFT EIS/EIR

State Clearinghouse Number: 2009031043

RESPONSES TO COMMENTS ON THE DRAFT EIS/EIR

Introduction

The Regional Connector Transit Corridor Project Draft EIS/EIR was made available to identified stakeholders, agencies, and the general public for review and comment for a 45-day review period from September 3, 2010 through October 18, 2010. During the public review period, Metro held two public hearings to receive oral and written testimony on the Draft EIS/EIR from the general public.

Volumes F-2 and F-3 of this Final EIS/EIR contain copies of all written comments and public hearing transcripts, and provide written responses to all comments received on the Draft EIS/EIR. A total of 195 comment letters were received during the public review period, including written materials submitted at the two public hearings. Comments were also submitted in the form of oral testimony at those hearings. A total of 44 public testimonies were recorded at the public hearings. Overall, a total of 1,030 individual comments were received on the Regional Connector Transit Corridor Project Draft EIS/EIR.

The format for the responses to comments presents each comment letter/hearing transcript, bracketed into separate comments, followed by corresponding responses to each individual comment of that comment letter/hearing transcript. The comment letters/hearing transcripts and responses are organized and grouped into the following categories based on the affiliation of the commenter as follows:

Letter/Speaker ID Prefix	Description
AF	Federal Agency
AL	Local Agency
AR	Regional Agency
AS	State Agency
BU	Businesses and Business Groups
CN	Community Groups and Non-Profit Organizations
PC	Public Comment
PHA	The first public hearing held on September 28, 2010
PHB	The second public hearing held on October 4, 2010

To assist the reader's review and use of the responses to comments, two indices that provide the commenter name, affiliation, and comment letter/speaker identification designator (e.g., PC1) for each comment letter are provided below. The first index lists all the comment letters by comment letter/speaker identification designator and the second lists all of the comment letters alphabetically by commenter's last name.

Index by Comment Letter/Speaker Identification Designator

September 29, 2010

Ms. Dolores Roybal Saltarelli
Los Angeles County Metropolitan Transportation Authority
1 Gateway Plaza, MS 99-22-2
Los Angeles, California 90012

Dear Ms. Saltarelli:

This is in response to your request for comments on the Draft Environmental Impact Statement/Environmental Impact Report for the Regional Connector Transit Corridor Project in Los Angeles County, California.

Please review the current effective countywide Flood Insurance Rate Maps (FIRMs) for the County (Community Number 065043) of Los Angeles, Maps revised September 26, 2008. Please note that Los Angeles County, California is a participant in the National Flood Insurance Program (NFIP). The minimum, basic NFIP floodplain management building requirements are described in Vol. 44 Code of Federal Regulations (44 CFR), Sections 59 through 65.

A summary of these NFIP floodplain management building requirements are as follows:

- All buildings constructed within a riverine floodplain, (i.e., Flood Zones A, AO, AH, AE, and A1 through A30 as delineated on the FIRM), must be elevated so that the lowest floor is at or above the Base Flood Elevation level in accordance with the effective Flood Insurance Rate Map.

- If the area of construction is located within a Regulatory Floodway as delineated on the FIRM, any ***development*** must not increase base flood elevation levels. **The term *development* means any man-made change to improved or unimproved real estate, including but not limited to buildings, other structures, mining, dredging, filling, grading, paving, excavation or drilling operations, and storage of equipment or materials.** A hydrologic and hydraulic analysis must be performed *prior* to the start of development, and must demonstrate that the development would not cause any rise in base flood levels. No rise is permitted within regulatory floodways.

1

- All buildings constructed within a coastal high hazard area, (any of the "V" Flood Zones as delineated on the FIRM), must be elevated on pilings and columns, so that the lowest horizontal structural member, (excluding the pilings and columns), is elevated to or above the base flood elevation level. In addition, the posts and pilings foundation and the structure attached thereto, is anchored to resist flotation, collapse and lateral movement due to the effects of wind and water loads acting simultaneously on all building components.

- Upon completion of any development that changes existing Special Flood Hazard Areas, the NFIP directs all participating communities to submit the appropriate hydrologic and hydraulic data to FEMA for a FIRM revision. In accordance with 44 CFR, Section 65.3, as soon as practicable, but not later than six months after such data becomes available, a community shall notify FEMA of the changes by submitting technical data for a flood map revision. To obtain copies of FEMA's Flood Map Revision Application Packages, please refer to the FEMA website at http://www.fema.gov/business/nfip/forms.shtm.

1
cont'd

Please Note:

Many NFIP participating communities have adopted floodplain management building requirements which are more restrictive than the minimum federal standards described in 44 CFR. Please contact the local community's floodplain manager for more information on local floodplain management building requirements. The Los Angeles County floodplain manager can be reached by calling George De La O, Senior Civil Engineer, at (626) 458-7155.

If you have any questions or concerns, please do not hesitate to call Cynthia McKenzie of the Mitigation staff at (510) 627-7190.

Sincerely,

Gregor Blackburn, CFM, Branch ~~Chief~~
Floodplain Management and Insurance Branch

Responses to Comments from the U.S. Department of Homeland Security – FEMA, Blackburn, Gregor

Response to Comment AF1-1

Metro has reviewed the referenced Flood Insurance Rate Maps, and will comply with all applicable federal regulations. Metro will coordinate with the Federal Emergency Management Agency as necessary throughout the project. Metro appreciates the additional floodplain management regulatory information.

UNITED STATES ENVIRONMENTAL PROTECTION AGENCY
REGION IX
75 Hawthorne Street
San Francisco, CA 94105-3901

October 8, 2010

Mr. Ray Tellis
Federal Transit Administration
Los Angeles Metropolitan Office
888 S. Figueroa Street, Suite 1850
Los Angeles, California 90017

Subject: Draft Environmental Impact Statement for the Regional Connector Corridor Project, Los Angeles, California (CEQ # 20100352)

Dear Mr. Tellis:

The Environmental Protection Agency (EPA) has reviewed the above-referenced document. As described in the Draft Environmental Impact Statement (DEIS), this project proposes to construct a light rail connector in downtown Los Angeles that will directly link the tracks of the Metro Gold Line light rail system with the Metro Blue Line and future Metro Expo Line. Our comments are provided pursuant to the National Environmental Policy Act (NEPA), Council on Environmental Quality (CEQ) regulations (40 CFR Parts 1500-1508), and Section 309 of the Clean Air Act. EPA has rated this project as Lack of Objections (LO) (see enclosed *Summary of EPA Rating Definitions*). 1

We commend the Federal Transit Administration (FTA) and the Los Angeles County Metropolitan Transportation Authority (LACMTA) for seeking to improve public transportation service, especially in an area of high transit dependence, high traffic congestion, and impacted air quality. We believe this project, with the level of ridership anticipated, has the potential to increase use of multiple transit lines, reduce air quality and greenhouse gas emissions impacts from vehicles, and improve the overall livability of the Los Angeles region. 2

We are particularly encouraged to see the addition of the Fully Underground LRT Alternative, which was identified through community engagement and has evolved to best address community concerns (as evidenced by the Little Tokyo Community Council letter of support; Appendix EE). We believe, based upon the technical analysis presented in the DEIS, that this alternative is likely to provide for the greatest environmental benefit, while also uniquely addressing concerns that were raised during the public outreach effort. As such, we are supportive of the recommendation by Metro staff that the Fully Underground LRT Alternative be designated the Locally Preferred Alternative. 3

We also appreciate that the DEIS uses plain language and illustrative graphics to make the technical information more easily understood by the public. In particular, the comparison and 4

screening of alternatives provides the public and decision-makers with a clear summary of the benefits and impacts of the various alternatives. Our few concerns, as described below, focus on how the DEIS addresses air quality impacts and smart growth. 4 cont'd

Air Quality

Construction Emissions

EPA commends Metro for commitments in the DEIS to mitigate air quality impacts from construction, including:

- Retrofitting off-road engines with add-on control devices such as catalytic oxidizers and diesel particulate filters to reduce NOx and PM10 emissions.
- Requiring contractors to use up-to-date (2014 or later) equipment during project construction to control emissions of VOC and CO.
- Applying water or a stabilizing agent to exposed surfaces in sufficient quantity to prevent generation of dust plumes.
- Requiring contractors to utilize measures set forth in the South Coast Air Quality Management District Rule 403 section (d)(5) to remove bulk material from tires and vehicle undercarriages before vehicles exit the project site.
- Covering all trucks hauling soil, sand, and other loose materials with tarps or other enclosures that would reduce fugitive dust emissions.
- Limiting traffic speeds on unpaved roads to 15 mph.
- Suspending operations on unpaved surfaces when winds exceed 25 mph.
- Suspending heavy equipment operations during first and second stage smog alerts.
- Covering/watering on-site stockpiles of debris, dirt, or rusty materials.
- Requiring contractors to utilize electricity from power poles rather than temporary diesel or gasoline generators, as feasible.
- Prohibiting heavy-duty trucks from idling in excess of five minutes.
- Configuring construction parking to minimize traffic interference.
- Limiting construction activity that affects traffic flow on the arterial system to off-peak hours, as feasible.

5

As the project is located in the South Coast Air Basin, which is classified as non-attainment for ozone and particulate matter (PM_{10} and $PM_{2.5}$), we recommend that the Final EIS (FEIS) provide commitments for the following additional mitigation measures to ensure air quality impacts from construction are mitigated to the greatest extent possible:

Mobile and Stationary Source Controls:

- Reduce use, trips, and unnecessary idling from heavy equipment. The California Air Resources Board has a number of mobile source anti-idling requirements which could be employed. See their website at: http://www.arb.ca.gov/msprog/truck-idling/truck-idling.htm.
- Employ periodic, unscheduled inspections to limit unnecessary idling and to ensure that construction equipment is properly maintained, tuned, and modified consistent with the above-stated commitments.

6

- Prohibit any tampering with engines and require continuing adherence to manufacturer's recommendations. 7
- Where appropriate, use alternative fuels such as natural gas and electric. 8

Administrative controls:

- Identify where implementation of mitigation measures is rejected based on economic infeasibility. 9
- Prepare an inventory of all equipment prior to construction and identify the suitability of add-on emissions control devices for each piece of equipment before groundbreaking. (Suitability of control devices is based on: whether there is reduced normal availability of the construction equipment due to increased downtime and/or power output, whether there may be significant damage caused to the construction equipment engine, or whether there may be a significant risk to nearby workers or the public.) 10
- Identify sensitive receptors in the project area, such as daycare centers, senior housing, and hospitals, and specify the means by which you will minimize impacts to these populations. For example, locate construction equipment and staging zones away from sensitive receptors and fresh air intakes to buildings and air conditioners. 11

Localized Air Quality Impacts due to Increased Congestion

While the project may decrease air quality impacts and concentrations of mobile source air toxics (MSATs) in the area as a result of increased transit ridership and lower automobile use, localized impacts may result from increased congestion at intersections whose level of service would decline as a result of the project. This is particularly concerning for the At-Grade Emphasis LRT alternative which, after mitigation, would continue to have impacts to at least 15 intersections. EPA encourages FTA and LACMTA to consider whether sensitive receptors such as schools, hospitals, or residential facilities for the elderly, are located near those intersections, and if so, implement mitigation measures to protect the impacted populations. 12

Recommendations:

- Determine whether increased congestion at identified intersections would result in air quality impacts on any sensitive receptors in the vicinity of those intersections.
- If adverse impacts would occur, propose mitigation for those impacts and include this information and mitigation measures in the FEIS.

Smart Growth

While the project has great potential to enhance livability in the Los Angeles region, we believe it could be integrated with additional smart growth and sustainability principles, including many of those recommended as part of the HUD/DOT/EPA Partnership for Sustainable Communities (http://www.epa.gov/smartgrowth/partnership/). For additional information on smart growth as it relates to transportation infrastructure, see *Pedestrian and Transit-Friendly Design: A Primer for Smart Growth* (http://www.epa.gov/smartgrowth/pdf/ptfd_primer.pdf). 13

Recommendations:

- The FEIS should include discussion of actions that can be taken during project development to foster the implementation of smart growth strategies in the project area including coordination of different transit options to ensure multi-modal opportunities are available at all station locations, ensuring the ability to easily transfer between transit options, and improving pedestrian and bicycle facilities in the project area.
- We urge FTA and LACMTA to coordinate with local municipalities in the pursuit of zoning ordinances that encourage smart growth in the project area, thereby increasing the project's potential to enhance livability in the downtown Los Angeles area.

13 cont'd

14

Community Involvement

EPA commends FTA and LACMTA on their involvement with communities in the vicinity of the project area. It appears from the DEIS that coordination between government agencies, the Little Tokyo community, business owners, and other individuals has been ongoing and transformative throughout the project planning process. EPA encourages FTA and LACMTA to continue to consider the long-term needs of, and potential benefits to, the community in determining future project actions.

15

Recommendations:

- The FEIS should evaluate all mitigation measures suggested by the Little Tokyo Working Group to determine their effectiveness and feasibility.
- Identify where implementation of community mitigation measures has been rejected and provide a discussion of the reasons for rejection.

We appreciate the opportunity to review this DEIS and look forward to future coordination on the project. When the FEIS is released for public review, please send one copy and one disc to the address above (mail code: CED-2). If you have any questions, please contact Clifton Meek, the lead reviewer for this project, at 415-972-3370 or meek.clifton@epa.gov.

Sincerely,

Connell Dunning

Enclosures:
Summary of EPA Rating Definitions

cc: Dolores Roybal-Saltarelli, Los Angeles County Metropolitan Transportation Authority
Ray Sukys, Federal Transit Administration

SUMMARY OF EPA RATING DEFINITIONS*

This rating system was developed as a means to summarize the U.S. Environmental Protection Agency's (EPA) level of concern with a proposed action. The ratings are a combination of alphabetical categories for evaluation of the environmental impacts of the proposal and numerical categories for evaluation of the adequacy of the Environmental Impact Statement (EIS).

ENVIRONMENTAL IMPACT OF THE ACTION

"LO" (Lack of Objections)

The EPA review has not identified any potential environmental impacts requiring substantive changes to the proposal. The review may have disclosed opportunities for application of mitigation measures that could be accomplished with no more than minor changes to the proposal.

"EC" (Environmental Concerns)

The EPA review has identified environmental impacts that should be avoided in order to fully protect the environment. Corrective measures may require changes to the preferred alternative or application of mitigation measures that can reduce the environmental impact. EPA would like to work with the lead agency to reduce these impacts.

"EO" (Environmental Objections)

The EPA review has identified significant environmental impacts that should be avoided in order to provide adequate protection for the environment. Corrective measures may require substantial changes to the preferred alternative or consideration of some other project alternative (including the no action alternative or a new alternative). EPA intends to work with the lead agency to reduce these impacts.

"EU" (Environmentally Unsatisfactory)

The EPA review has identified adverse environmental impacts that are of sufficient magnitude that they are unsatisfactory from the standpoint of public health or welfare or environmental quality. EPA intends to work with the lead agency to reduce these impacts. If the potentially unsatisfactory impacts are not corrected at the final EIS stage, this proposal will be recommended for referral to the Council on Environmental Quality (CEQ).

ADEQUACY OF THE IMPACT STATEMENT

Category "1" (Adequate)

EPA believes the draft EIS adequately sets forth the environmental impact(s) of the preferred alternative and those of alternatives reasonably available to the project or action. No further analysis or data collection is necessary, but the review may suggest the addition of clarifying language or information.

Category "2" (Insufficient Information)

The draft EIS does not contain sufficient information for EPA to fully assess environmental impacts that should be avoided order to fully protect the environment, or the EPA reviewer has identified new reasonably available alternatives that are wit the spectrum of alternatives analyzed in the draft EIS, which could reduce the environmental impacts of the action. T identified additional information, data, analyses, or discussion should be included in the final EIS.

Category "3" (Inadequate)

EPA does not believe that the draft EIS adequately assesses potentially significant environmental impacts of the action, the EPA reviewer has identified new, reasonably available alternatives that are outside of the spectrum of alternativ analyzed in the draft EIS, which should be analyzed in order to reduce the potentially significant environmental impacts. E believes that the identified additional information, data, analyses, or discussions are of such a magnitude that they sho have full public review at a draft stage. EPA does not believe that the draft EIS is adequate for the purposes of the NE and/or Section 309 review, and thus should be formally revised and made available for public comment in a supplementa revised draft EIS. On the basis of the potential significant impacts involved, this proposal could be a candidate for referra the CEQ.

*From EPA Manual 1640, Policy and Procedures for the Review of Federal Actions Impacting the Environment.

Responses to Comments from the U.S. Environmental Protection Agency - Region IX, Dunning, Connell

Response to Comment AF2-1

Comment acknowledged. Please refer to Responses to Comments AF2-2 through AF2-15, below, for detailed responses regarding concerns raised by the Environmental Protection Agency.

Response to Comment AF2-2

Comment acknowledged.

Response to Comment AF2-3

Comment acknowledged.

Response to Comment AF2-4

Comment acknowledged.

Response to Comment AF2-5

Comment acknowledged.

Response to Comment AF2-6

The following mitigation measure has been added to Section 4.5.4.2 of this Final EIS/EIR and the Mitigation Monitoring and Reporting Program for the Locally Preferred Alternative (Chapter 8):

Heavy-duty trucks shall be prohibited from idling in excess of five minutes, both on- and off-site. Metro shall employ CARB anti-idling requirements during construction, which would reduce emissions generated from construction vehicles. Metro shall require the contractor to regularly perform unscheduled inspections of construction equipment and activities to ensure minimization of associated air quality impacts.

Response to Comment AF2-7

The following mitigation measure has been added to Section 4.5.4.2 of this Final EIS/EIR and the Mitigation Monitoring and Reporting Program for the Locally Preferred Alternative (Chapter 8):

Metro shall require ongoing maintenance and adherence to manufacturer's specifications for all construction equipment engines and vehicles.

Generally, the construction contractor will be required to address this concern.

Response to Comment AF2-8

The following mitigation measure has been added to Section 4.5.4.2 of this Final EIS/EIR and the Mitigation Monitoring and Reporting Program for the Locally Preferred Alternative (Chapter 8):

Contractors shall utilize electricity supplied by the Los Angeles Department of Water and Power (LADWP) rather than temporary diesel or gasoline generators, as feasible.

Response to Comment AF2-9

Metro will implement all necessary, economically feasible mitigation measures to reduce air quality impacts below significance thresholds. These are shown in the Mitigation Monitoring and Reporting Program for the Locally Preferred Alternative (Chapter 8) of this Final EIS/EIR and will be shown in the Record of Decision as committed mitigation measures.

Response to Comment AF2-10

The use of add-on emissions control devices was identified as a mitigation measure in Section 4.5.4.1 of the Draft EIS/EIR, and has been incorporated into Section 4.5.4.2 and the Mitigation Monitoring and Reporting Program for the Locally Preferred Alternative, Chapter 8, of this Final EIS/EIR.

Response to Comment AF2-11

Metro has identified daycare centers, senior housing, hospitals (none close enough to the proposed alignment to be affected), and other sensitive receptors as part of the noise analysis in Table 4.7-6 of the Draft EIS/EIR and this Final EIS/EIR. Construction activity zones have been proposed in locations that would minimize noise impacts to nearby sensitive receptors, and this would minimize air quality impacts as well.

Response to Comment AF2-12

The traffic analysis for the Locally Preferred Alternative in Figure 3-16 of the Draft EIS/EIR showed that during project operation only one intersection (4th and Flower Streets) would have significantly increased congestion after mitigation(refer to Table 3-2 in this Final EIS/EIR for thresholds of significance), and only during the AM peak period. The At-Grade Emphasis LRT Alternative would have had significant impacts at 18 intersections, despite the implementation of mitigation measures, as shown in Figure 3-14 of the Draft EIS/EIR and this Final EIS/EIR. The Metro Board of Directors did not identify this alternative as the Locally Preferred Alternative, and instead designated the Fully Underground LRT Alternative as the Locally Preferred Alternative on October 28, 2010. The CO hot spot analysis in Section 4.5.3.4.3 of the Draft EIS/EIR and this Final EIS/EIR concluded that concentrations of CO would not exceed the California Ambient Air Quality Standards or National Ambient Air Quality Standards for any of the alternatives.

Response to Comment AF2-13

Metro has reviewed the websites and appreciates the additional information. It is Metro's desire to encourage smart growth and sustainability where possible. Discussion of smart growth and opportunities to encourage multimodal transportation has been added to Section 4.1, Land Use and Development, of this Final EIS/EIR.

Response to Comment AF2-14

Metro has been coordinating with the City of Los Angeles to foster the project's potential to enhance livability in downtown Los Angeles. Several smart growth supportive ordinances are already in place in the project area.

Response to Comment AF2-15

Metro appreciates the commendation from EPA. The Mitigation Monitoring and Reporting Program for the Locally Preferred Alternative (Chapter 8) of this Final EIS/EIR includes feasible mitigation measures proposed by the Little Tokyo Working Group. All mitigation measures listed in Section 4.17.5 of the Draft EIS/EIR have been included in the Mitigation Monitoring and Reporting Program for the Locally Preferred Alternative, except for direct monetary compensation for business losses. This mitigation measure was not included due to the infeasibility of verifying business losses due to Regional Connector construction activities. However, the Mitigation Monitoring and Reporting Program for the Locally Preferred Alternative does include measures to address impacts to businesses. It is Metro's goal to minimize impacts to businesses in Little Tokyo throughout the construction process. Additionally, refinements made to the Locally Preferred Alternative since publication of the Draft EIS/EIR would avoid cut and cover construction on 2nd Street, and reduce impacts to businesses.

The EPA has been added to the distribution list to receive (at the address stated in the letter) a disc of this Final EIS/EIR. In an effort to meet Metro's sustainability goals, hard copies of this Final EIS/EIR were not included in distributions to agencies.

Dear Ms. Saltarelli:

NOTICE OF AVAILABILITY FOR THE REGIONAL CONNECTOR TRANSIT CORRIDOR PROJECT, DRAFT ENVIRONMENTAL IMPACT STATEMENT/ENVIRONMENTAL IMPACT REPORT, LOS ANGELES (FFER #201000177)

The Notice of Availability has been reviewed by the Planning Division, Land Development Unit, Forestry Division, and Health Hazardous Materials Division of the County of Los Angeles Fire Department. The following are their comments:

PLANNING DIVISION:

1. We have no comments at this time. 1

LAND DEVELOPMENT UNIT:

1. The County of Los Angeles Fire Department, Land Development Unit has no comments on this project. This project is located entirely in the City of Los Angeles; therefore, the City of Los Angeles Fire Department has jurisdiction concerning this project and will be setting conditions. 2

2. Should any questions arise, please contact the County of Los Angeles Fire Department, Land Development Unit, Inspector Juan Padilla at (323) 890-4243.

FORESTRY DIVISION – OTHER ENVIRONMENTAL CONCERNS:

1. The statutory responsibilities of the County of Los Angeles Fire Department, Forestry Division includes erosion control, watershed management, rare and endangered species, vegetation, fuel modification for Very High Fire Hazard Severity Zones or Fire Zone 4, archeological and cultural resources, and the County Oak Tree Ordinance. 3

2. Due to the limited amount of information included in your request, we are unable to respond to specific potential impacts.

3 cont'd

HEALTH HAZARDOUS MATERIALS DIVISION:

4

1. The Health Hazardous Materials Division has no objection to the proposed project.

If you have any additional questions, please contact this office at (323) 890-4330.

Very truly yours,

JOHN R. TODD, CHIEF, FORESTRY DIVISION
PREVENTION SERVICES BUREAU

Los Angeles, California 90012

RE: Draft Environmental Impact Study/Report
Downtown Regional Connector

Dear Ms. Roybal-Salterelli:

Of the choices for construction on this project, the only one that I support is the Fully Underground LRT Alternative. 1

The Metro Gold Line Eastside Light Rail Extension opened in November 2009. This opening followed a long and difficult period of time under which the Alameda Street right-of-way was under construction for the ramp coming down from the Santa Ana Freeway (CA 101) bridge and the Little Tokyo/Arts District station at First/Alameda streets.

In addition, as a result of construction, the City still does not have use of the First Street Bridge westbound lanes. This condition will likely persist until late 2011 and possibly 2012. There is no snapshot of what the traffic patterns will be once the bridge's westbound lanes open and the motorists and Gold Line riders interact at the Gold Line station.

I support the Little Tokyo Community Council's letter on this topic, dated September 27, 2010. This is the most impacted region on the route and this is the community that has endured the Gold Line work program issues. 2

This proposed project will have a devastating impact on the Little Tokyo community a critical part of Council District 9. The infrastructure in the Financial Core, on Bunker Hill, in the Civic Center and in Little Tokyo will be torn up for a very long time. This will impact pedestrians, motorists, bicycle riders and truck traffic in a negative way. Residents along the alignment will have to deal with noise, dirt and associated negative impacts. There will be times that streets, sidewalks and other parts of the infrastructure will either have reduced availability or have no access at all. 3

The Little Tokyo business community has reservations about this project as a "cut and cover" project and how construction will impact their businesses. They are concerned about the taking of all or part of Block 6 (First/Second/Alameda streets and Central Avenue) and the loss of those parking spaces. They are concerned about a loss of revenue. They are concerned about the time line and how to deal with the inevitable delays that can't be calculated at this time. 4

The impact may be nothing short of devastating. As one of the few remaining Japan towns left in the United States, Little Tokyo/Los Angeles is a valuable tourist destination and an iconic local hub for the local and regional Japanese and Japanese-American community. I share the community's concern for the impacts they will suffer as a result of the construction process.

I understand the overall benefit to the County by the construction of this proposed project. However, the fact that it is being built as an infill project instead of as a part of a long-term, comprehensive design for fixed rail travel is disturbing. It will be extremely important that we develop a plan that will manage the demands that a project of this scope will produce. 5

I look forward to hearing MTA's reaction to the letters offered on the Draft EIR/EIS process as well as the solutions that MTA has to offer to try to mitigate the issues raised. 6

Thank you for your careful attention to this important matter.

Sincerely,

Jan Perry
Councilwoman, Ninth District

JP/gf

AL2

Responses to Comments from the City of Los Angeles City Council, Perry, Jan

Response to Comment AL2-1

Thank you for your comment. Support for the Fully Underground LRT Alternative is noted. The Metro Board of Directors voted on October 28, 2010 to designate the Fully Underground LRT Alternative as the Locally Preferred Alternative.

Response to Comment AL2-2

Comment acknowledged. Please refer to Response to Comment AL2-3 below for a summary of construction impacts on Little Tokyo. A description and analysis of traffic conditions with the 1st Street bridge fully open is provided in Chapter 3 of the Draft EIS/EIR and this Final EIS/EIR.

Response to Comment AL2-3

Metro acknowledges the seriousness of construction impacts in Little Tokyo and other impacts in the project area, which is why Metro is proposing mitigation measures. In a letter sent in February 2010, the Little Tokyo Community Council commended Metro for adding the Fully Underground LRT Alternative (now the designated Locally Preferred Alternative) to the Draft EIS/EIR to address the community's concerns. Among the improvements cited in the letter was the elimination of the at-grade train crossing at 1st and Alameda Streets. Table 4.18-2 of the Draft EIS/EIR and Table 4.18-1 of this Final EIS/EIR specified that construction activities in the Little Tokyo area consist of cut and cover activities in the vicinity of the new underground station, each lasting from 12 to 24 months. Some of these activities could be performed simultaneously to reduce the overall duration of construction. During this time, Metro will implement mitigation measures to protect the Little Tokyo community and its businesses. Other cut and cover areas include the 2nd/Broadway station site, the 2nd/Hope Street station site, and Flower Street from Wilshire Boulevard to 4th Street. Cut and cover construction would involve temporary concrete decking that could be placed over the cut following the first part of excavation to allow traffic to pass above. Other than the temporary decking, cut and cover activities would not be visible above grade. The 2nd/Hope Street station site could also be constructed using sequential excavation method (SEM). Application of the SEM would have less surface interruption than cut and cover, since the excavation would be performed mostly underground and accessed via a vertical shaft. The other portions of the tunnel would be excavated using tunnel boring machines to minimize disruption, noise, dirt, and other negative impacts. Street and sidewalk access would be maintained continuously throughout construction.

Refinements have been made to the Locally Preferred Alternative since publication of the Draft EIS/EIR. These refinements would reduce the extent of cut and cover activities and associated street lane and sidewalk closures. No cut and cover would occur on 2nd Street in Little Tokyo, and the tunnel under Flower Street between 3rd and 4th Streets would be excavated using a tunnel boring machine instead of cut and cover.

Response to Comment AL2-4

As described in Chapter 2, Alternatives Considered, and Section 4.18, Construction Impacts, of this Final EIS/EIR, since publication of the Draft EIS/EIR, alignment refinements have been made to reduce the amount of cut and cover activities in the Little Tokyo area, and to reduce the extent of acquisitions needed on the block bounded by 1st Street, Central Avenue, 2nd Street, and Alameda Street. Most of the parking spaces on the block would be retained, and Metro would provide temporary replacement parking during construction as needed. The construction durations shown in Table 4.18-2 of the Draft EIS/EIR and Table 4.18-1 of this Final EIS/EIR are worst-case estimates that include the potential for delays, and Metro is working to shorten them. Metro recently completed a similar tunneling project on the Eastside Extension Phase 1 within schedule and budget.

Metro recognizes the significance of Little Tokyo to Japanese Americans nationwide, and expressed the community's importance in Section 4.17.2 of the Draft EIS/EIR and this Final EIS/EIR. Metro will enact the mitigation measures shown in the Mitigation Monitoring and Reporting Program for the Locally Preferred Alternative (Chapter 8) of this Final EIS/EIR to offset adverse business and community impacts during the construction process.

Response to Comment AL2-5

The Regional Connector is part of SCAG's 2008 Regional Transportation Plan as a strategic transit system expansion project. The project is being built as part of a comprehensive long-term public transit design. The purpose of the project is to improve the region's public transit service and mobility by connecting the light rail service of the Metro Gold Line to the Metro Blue Line and the Metro Expo Line. This link would serve communities across the region, allowing greater accessibility while serving population and employment growth in downtown Los Angeles.

Response to Comment AL2-6

Comment acknowledged. Metro has responded to all comments received on the Draft EIS/EIR during the public comment period, which are contained herein as part of this Final EIS/EIR. Please refer to Responses to Comments AL2-1 through AL2-5, above, for detailed responses regarding concerns raised by the commenter. Please refer to the Mitigation Monitoring and Reporting Program for the Locally Preferred Alternative in Chapter 8 of this Final EIS/EIR regarding mitigation measures that will be implemented as part of the Locally Preferred Alternative.

October 18, 2010

Mr. Art Leahy, Chief Executive Officer
Los Angeles County Metropolitan Transportation Authority (MTA)
One Gateway Plaza
Los Angeles, CA 90012

RE: CITY OF LOS ANGELES COMMENTS ON MTA'S REGIONAL CONNECTOR DRAFT ENVIRONMENTAL IMPACT STATEMENT/ ENVIRONMENTAL IMPACT REPORT (DRAFT EIS/EIR)

Dear Mr. Leahy,

The City of Los Angeles is pleased to provide comments on the Draft Environmental Impact Statement/Environmental Impact Report (DEIS/DEIR) for the Regional Connector project. City departments have reviewed the DEIS/DEIR document and have provided detailed comments and feedback for your consideration. For your convenience, the city departments providing comments are referenced in parenthesis in case your staff and/or consulting team needs to follow-up. The following city departments contributed to this review effort:

- Department of City Planning (DCP)
- Department of Public Works, Bureau of Engineering (BOE)
- Department of Public Works, Bureau of Street Lighting (BSL)
- Department of Transportation (DOT)
- Community Redevelopment Agency of the City of Los Angeles (CRA/LA)

Los Angeles recognizes the importance of the Regional Connector as an integral link in the region's growing transit network. The City looks forward to continuing working closely with MTA in the upcoming design and construction phase of the project.

Sincerely,

Gary Lee Moore
City Engineer, BOE

Michael LoGrande
General Manager, DCP

Ed Ibrahimian
General Manager, BSL

Rita Robinson
General Manager, LADOT

Christine Essel
Chief Executive Officer, CRA/LA

Environmental and Mitigation.....15

Construction.....22

Other Comments 27

Appendix.....29

Alternatives Evaluation

Preferred Alternative

Of the three Build Alternatives studied, the City supports and prefers MTA's Locally Preferred Alternative (LPA), the "Fully Underground Alternative," because it promotes many of the City goals that were discussed in the scoping letter. It preserves the City's street network and allows use of City streets by a variety of users, including pedestrians, bicycles and vehicles. Because it is underground, it does not have the same potential to introduce visual blight, disrupt the function of the streets and the economic vitality of the area but rather serves to enhance the transportation network and create opportunities to reinforce community character and identity through thoughtful station design and location and careful planning of future station area developments on potential joint development sites. Additional comments are provided on the At-Grade and Underground Emphasis Alternatives; however, there are a number of concerns related to these alternatives which are further described below (DCP).

LADOT supports selection of the Fully Underground LRT Alternative as the Locally Preferred Alternative because it provides the best fit for the project's transportation purpose and need, community concerns, and the constraints of the existing street system. It balances the goals of optimizing regional connectivity, reducing transit travel times and serving Downtown's major centers and communities while minimizing impacts on cars, buses, trucks, bicycles and pedestrians (DCP, LADOT). 1

Since a primary focus of the City is on the urban form and design and functionality of Downtown, the City is interested in remaining actively engaged in the ongoing design of the proposed stations and providing input on the use and design of the parcels and the spaces that are leftover after construction is over. the City is interested in working with MTA to develop criteria for the use and design of resulting joint development sites in order to ensure a land use intensity and urban form that is appropriate to the context of the various Downtown neighborhoods in which the stations will be located (DCP). 2

In the description of the "Initial Screening of Alternatives" given on page 2-5, a reference is made to "urban design assessments." Please elaborate on the criteria utilized in performing these assessments (DCP). 3

The Fully Underground LRT Alternative is also superior to the Underground Emphasis LRT Alternative because it maintains the existing design of the intersection of First St. and Alameda St. in Little Tokyo, rather than creating an underpass for Alameda St. under First St. Traffic circulation and access to adjacent institutional and commercial land uses at this intersection would be compromised with the Underground Emphasis LRT Alternative (LADOT). The Fully Underground LRT Alternative provides stations in the Financial District, Civic Center, Bunker Hill and Little Tokyo, as recommended previously by LADOT (LADOT). 4

CRA/LA lauds the proposed below-grade station in Little Tokyo that would accommodate the convergence of the Regional Connector's operations from the Exposition and Blue Lines with the Pasadena and East Los Angeles Gold Line operations (CRA/LA).

5

At-grade Alternative

The City continues to have concerns about the At-Grade alternative for many of the reasons described above. In particular, the frequency of trains using the system will invariably have a significant impact on the built form of Downtown Los Angeles and pedestrian, bicycle and vehicular circulation at street crossings, which are closely spaced along 2nd Street between Hill and Los Angeles Streets. Similarly, the City has concerns about the Underground Emphasis Alternative which requires a grade separation of the 1st and Alameda intersection and will disrupt the built form and circulation patterns in Little Tokyo. As a result the City urges MTA to move forward with the Fully Underground LRT Alternative (DCP). 6

In the description of vehicle and pedestrian circulation under the At-Grade Emphasis LRT Alternative on page 2-21, the report makes reference to "other urban design treatments" that could be employed for wider portions of the roadway. 7

The At-Grade Emphasis LRT Alternative is problematic because the Downtown street system cannot easily accommodate the large number of trains that will travel on the Regional Connector once MTA's LRT system is built out. With tie-ins to the MTA Blue Line, MTA Gold Line Extension and the Expo Line, light rail train volumes on the Regional Connector could reach approximately 36 trains per hour, assuming 10 minute headways in each direction for every line. With an at-grade alignment, this would mean an LRT train passing every 2 minutes through intersections, bringing cross street traffic operations, including transit buses and emergency vehicles, to a virtual standstill along the route. Grade separation will also allow trains to run faster, without constant slowing at signalized intersections, and eliminates the safety and security problems of at-grade train operations in Downtown, where marches, rallies and parades are common. Grade separation also allows for the preservation or widening of sidewalks along the LRT route (LADOT). 8

Transportation

Traffic Analysis and Significant Impacts

Under the Underground Emphasis LRT Alternative, seven intersections would have a significant, adverse change in level of service, while four intersections would have a beneficial change in level of service. Many of the proposed mitigations are not acceptable to LADOT for the reasons described below. LADOT recommends that the traffic impact mitigation program be revised to first evaluate multi-modal solutions that reduce vehicle trips and support transit use, before introducing traditional intersection-level mitigation measures. For example, the mitigation program should propose pedestrian enhancements that facilitate access to Downtown MTA Rail stations. It should also evaluate "first mile/last mile" solutions such as bicycle improvements (e.g., secure bike parking, bike sharing kiosks at strategic locations, bike lanes) and parking spaces for shared cars at MTA transit stations (LADOT). 9

The mitigation measures proposed at the intersections of Flower St./Fourth St. and Flower Street/Fifth St. may be feasible; however, LADOT cannot accept them without reviewing conceptual drawings first. These drawings should indicate the proposed new lane dimensions and whether any on-street parking spaces would be eliminated. Street and sidewalk widths should be consistent with the new Downtown Street Standards adopted by the City Council last year (Section 3.3.4.2.2 – Traffic Circulation) (LADOT, DCP). 10

The traffic impact analysis for this project identified 85 intersections for detailed analysis. For the TSM Alternative, nine of these intersections would be significantly impacted. The At-Grade Emphasis LRT alternative is expected to result in 26 significant impacted intersections. The Underground Emphasis LRT alternative is expected to result in seven significantly impacted intersections. The Fully-Underground LRT Alternative would significantly impact only three intersections (LADOT).

Many of the proposed mitigation measures for the significantly impacted intersections are not acceptable to LADOT for the reasons described below. Mitigations proposed at the intersections of Hill St./Second St., Los Angeles St./ Temple Street, Judge John Aiso Street/Temple Street and Spring Street/Fourth Street may be feasible; however, LADOT cannot accept them without reviewing conceptual drawings first. These drawings should indicate the proposed new lane dimensions and whether any on-street parking spaces would be eliminated. Street and sidewalk widths should be consistent with the new Downtown Street Standards adopted by the City Council last year (See Section 3.3.3.2.2 – Traffic Circulation). 11

LADOT has reviewed the traffic mitigation measures proposed to offset the impacts of the various project Alternatives. However, conceptual mitigation drawings were not 12

included in the traffic analysis, so it is unclear whether the proposals are feasible. Nonetheless, based on our review of the impacted intersections, it appears that many of the proposed mitigations are infeasible and unacceptable (LADOT). 12 cont'd

For example, at several intersections, the study proposes to convert existing left-turn lanes into shared left-through lanes. Exclusive turn lanes have been installed by the City to enhance traffic safety and meet existing traffic demands, so removing them should not be considered for mitigation purposes. LADOT also would like to reduce the use of dual right-turn lanes, especially in Downtown, to minimize potential vehicular/pedestrian conflicts. The proposed installation of dual right-turn lanes as a mitigation measure is therefore not recommended unless pedestrian volumes are low enough to support the removal of crosswalks that would be affected by the dual turn lanes (LADOT). 13

Per LADOT traffic study guidelines, lane re-striping alone is not considered an acceptable mitigation measure. Lane re-striping needs to be coupled with a traffic signal upgrade or other physical improvement. Similarly, changes to traffic signal timing are not acceptable as stand-alone mitigation measures. At several intersections, the DEIS/DEIR indicates that the project will "optimize the signal splits" to reduce traffic impacts. However, the traffic signal system in Downtown has already been adjusted to allow for maximum real-time optimization of the traffic signal timing (LADOT). 14

Under the TSM Alternative, fifteen (15) intersections would have a significant, adverse change in level of service. Many of the proposed mitigation measures for the significantly impacted intersections are not acceptable for the reasons described herein. The mitigations proposed at the intersections of Spring St./Third St., Flower St./Wilshire Bl., Broadway/Temple St. and Alameda St./Los Angeles St. may be feasible; however, LADOT cannot determine their feasibility or accept these mitigation measures without reviewing conceptual plans first. These drawings should indicate the proposed new lane dimensions and whether any on-street parking spaces would be impacted. Street and sidewalk widths should be consistent with the new Downtown Street Standards adopted by the City Council in 2009 (Section 3.3.2.2 –Traffic Circulation Impacts). 15

Under the At-Grade Emphasis Alternative, the entrances for the Flower St./Sixth St./Fifth St. station would require a lane to be removed on Flower St. between Fourth and Sixth Streets. As such, level of service at intersections along this segment of Flower St. would worsen (LADOT). 16

Installation of the at-grade LRT tracks on Second St. between Hill St. and Los Angeles St. would turn Second St. into a limited-access street for emergency vehicles and local access only, resulting in traffic diversion to First St., Third St. and Fourth St. and contributing to the number of project-impacted intersections in Downtown. It would 17

permanently disrupt the local street system which serves this increasingly vibrant urban neighborhood and is not acceptable (LADOT). 17 cont'd

Traffic signals along the LRT alignment would require modifications for at-grade rail operations to provide adequate time for trains to safely clear intersections before traffic could progress. As a result, 26 intersections would experience significant adverse impacts during the PM peak under the At-Grade LRT Alternative (LADOT) 18

Bicycles and Pedestrians (General)

The City is concerned about impact of the At-Grade Alternative on plans for a bike route on Flower Street. (This concern also applies to the Underground Emphasis and the fully Underground Alternative which would eliminate a lane on Flower Street from 4th to 6th Streets to accommodate the underground station. See more discussion below). In particular, proposed re-striping mitigations on Flower (4th, 5th, and 6th) and 2nd Street at Alameda (underground emphasis only) may not be consistent with the City's plans to stripe for bike lanes along these streets. Please refer to the Downtown Street Standards recommendations and Draft 2010 Bike Plan for more details (DCP). 19

In the summary of operational impacts of the Underground Emphasis and Fully Underground Alternatives on "other modes" (see pages 3-44 and 3-51), the document refers to "urban design concepts" that could improve pedestrian and bicycle safety and flow. Please give examples or reference documents explaining specific urban design concepts or examples of concepts. Additionally, the following statement should be revised to be more specific about alignment of station entrances to face toward major streets where possible. "At station areas, pedestrian station entrances would be located and face toward major signalized intersections, where pedestrian crosswalks are currently in place." (DCP). 20

As stated previously, LADOT recommends that the traffic impact mitigation program be revised to first evaluate multi-modal solutions that reduce vehicle trips and support transit use, before introducing traditional intersection-level mitigation measures. For example, the mitigation program should propose pedestrian enhancements that facilitate access to Downtown MTA Rail stations. It should also evaluate "first mile/last mile" solutions such as bicycle improvements (e.g., secure bike parking, bike sharing kiosks at strategic locations, bike lanes) and parking spaces for shared cars at MTA transit stations (LADOT). 21

In summary, consistent with new LADOT traffic study guidelines, the mitigation program should give first priority to trip reduction and transit-supportive measures such as improved pedestrian and bicycle connections to stations, car/bicycle sharing facilities, secure bicycle parking, kiss-n-ride facilities and first mile/last mile transportation connections. Intersection capacity and traffic safety improvements should also be evaluated at key intersections to alleviate known bottlenecks and to enhance at-grade transit service and operations. Stand-alone changes to traffic signal timing are not acceptable as mitigation measures; instead, the project should propose traffic signal upgrades such as left-turn phasing, new signal controllers, additional system loops, closed-circuit television cameras, etc. Please coordinate with LADOT to determine where such traffic signal upgrades are needed (LADOT). 22

We also recommend that the DEIS/DEIR include an analysis and discussion of the project's relationship to the draft 2010 "LA City Bicycle Plan", which can be found at www.labikeplan.org. Though still a draft, the Plan is near adoption and contains recommendations for new proposed/ potential bike lanes, as well as additional proposed Bicycle Friendly Streets. A number of these additional facilities can help improve access to transit stations and should be considered in the project analysis. The Regional Connector project should incorporate these bicycle facilities as appropriate and feasible. Note that the plan is still in draft form and has yet to be adopted by the Council and Mayor (DCP and LADOT). 23

During the final design phase, site- and street-specific Worksite Traffic Control Plans should be developed in conjunction with LADOT's Temporary Traffic Control office to accommodate vehicular, pedestrian and bicycle movements (Section 3.3.3.1 – Construction Impacts). 24

Construction of the At-Grade Emphasis Alternative LRT tracks, stations and proposed Alameda St. underpass at Temple St. would require temporary closure of lanes on Flower St., Hope St. in the vicinity of General Thaddeus Kosciuszko Way, Main St., Los Angeles St., Temple St., Second St. and Alameda Street over and above the number of lanes that would be permanently removed to accommodate the LRT tracks. Track construction along Second St. would close affected segments to through traffic in both directions. This would reduce roadway capacity and modify existing traffic patterns as drivers bypass congested areas. Similar to the construction traffic control measures used in the MTA Gold Line Extension to East LA project, traffic flow patterns should be re-routed appropriately with clearly signed and marked detours (LADOT). 25

Conflicts between trains and pedestrians may also occur at the tunnel portal on Flower St. south of Third St. where pedestrians could attempt to enter the tunnel. Signing, surveillance and protective barriers should be utilized at tunnel portals to reduce the possibility of unauthorized tunnel entry. Safety issues associated with unauthorized pedestrian crossings of the tracks should be addressed during design to minimize possible conflicts. A pedestrian bridge could also be constructed between the Second St./Hope St. station and upper Grand Ave. to improve the pedestrian linkage to Bunker Hill (LADOT). 26

The sidewalk width along Flower St. between Sixth St. and Third St. should be maintained or widened as needed to accommodate passengers accessing the station at this location. In general, station entrances should be easily accessible from nearby signalized intersections where pedestrian crosswalks are available (LADOT). 27

Where the tracks cross Alameda St. at-grade at Temple St., the proposed pedestrian bridge would reduce potential conflicts between pedestrians, trains and motor vehicles. However, safety issues associated with unauthorized pedestrian crossings of the tracks at this location should be addressed during design to minimize possible conflicts (See 3.3.3.2.4 – Other Modes). 28

In addition to addressing safety concerns, the project should support the City's goals to maintain existing pedestrian connections and to maintain and improve existing patterns of pedestrian circulation as much as possible on the streets (DCP). 29

The reduction in roadway capacity for automobiles along the LRT at-grade alignment will divert local traffic to adjacent streets, impacting bicycle traffic in surrounding communities. Potential bicycle impacts would be significant under this Alternative, but no mitigation measures are proposed in the DEIS/DEIR (LADOT). 30

Parking

Portions of the At-Grade Emphasis LRT Alternative alignment would utilize existing roadway for tracks, surface street stations, underground station entrances and a roadway underpass on Alameda St. Traffic lanes and/or parking spaces along these segments would be reduced, resulting in the loss of 80 metered parking spaces and loading spaces and 3 bus zones. These parking and loading space losses would result in a significant, adverse impact on the Little Tokyo community. The impact is considered to be less than significant with implementation of mitigation measures, but no long-term parking mitigation measures are presented in the DEIS/DEIR. The impact should be mitigated with nearby replacement metered parking, loading zones and bus zones (See Section 3.3.3.2.3 – Parking) (LADOT). 31

Traffic Control

During the final design phase for construction, site- and street-specific Worksite Traffic Control Plans should be developed in conjunction with LADOT's Temporary Traffic Control office to accommodate vehicular, pedestrian and bicycle movements (Section 3.3.4.1 – Construction Impacts) (LADOT). 32

Construction of the Underground Emphasis Alternative would require temporary closure of lanes on Flower St., Second St., Alameda St., First St. and Hope St. in the vicinity of General Thaddeus Kosciuszko Way. This would temporarily reduce roadway capacity and potentially modify existing traffic patterns as drivers bypass congested areas. Similar to the construction traffic control measures used in the MTA Gold Line Extension to East LA project, traffic flow patterns should be re-routed appropriately with clearly signed and marked detours (Section 3.3.4.1.2 – Traffic Circulation) (LADOT). 33

Construction of the proposed Alameda Street underpass at First Street, in the Underground Emphasis Alternative, would reduce roadway capacity for extended periods during construction. To maintain two through travel lanes in each direction, the two-way left turn median would be eliminated in the mid-block area as would the exclusive right and left turn lanes at the intersection approaches. The north and south intersection lane configurations would consist of a shared through/right lane and a shared through/left lane for the segment of Alameda St. between Temple Street and Second Street (Section 3.3.4.1.2 – Traffic Circulation) (LADOT).

This proposed lane configuration creates the potential for vehicular conflicts between left turners and opposing through movements on Alameda St. Travel times for buses along this segment of Alameda St. would also likely increase due to increased traffic congestion. The project should mitigate this impact by proposing to split the signal phasing to minimize the potential for operational conflicts and prevent the formation of queues by vehicles waiting for a gap in opposing traffic to make a left turn. Also, bus stops within the construction area may need to be temporarily relocated to prevent vehicular delays while passengers are boarding. 34

To accommodate pedestrian station entrances to the underground station at Fifth St., one traffic lane would be removed on the east side of Flower St. between Sixth and Fourth Streets. Intersection impacts should be mitigated per LADOT standards, described above, along this segment of Flower Street (Section 3.3.4.2.2 – Traffic Circulation) (LADOT). 35

The proposed Alameda St. underpass at First St. is expected to result in traffic diversion to adjacent streets because some at-grade turns from Alameda St. to First St. would be 36

eliminated. The DEIS/DEIR should analyze this potential impact (Section 3.3.4.2.2 – Traffic Circulation) (LADOT). 36 cont'd

Portions of the Underground Emphasis LRT Alternative would use existing roadway to create station entrance areas and an underpass on Alameda St. At these locations, there would be a reduction in traffic lanes and/or parking spaces, resulting in the loss of 29 metered parking spaces and loading zones and three bus zones. The impact is considered to be less than significant with implementation of mitigation measures, but no long-term parking mitigation measures are presented in the DEIS/DEIR. The impact should be mitigated with nearby replacement metered parking, loading zones and relocated bus zones (Section 3.3.4.2.3 – Parking) (LADOT). 37

Where the tracks cross Alameda St. at First St. at-grade, the optional pedestrian bridge would reduce potential conflicts between pedestrians, trains and motor vehicles. However, safety issues associated with unauthorized pedestrian crossings of the tracks at this location should be addressed during design to minimize possible conflicts (Section 3.3.4.2.4 – Other Modes) (LADOT). 38

The sidewalk width along Flower St. between Sixth St. and Third St. and along Second St. at the station entrances should be maintained or widened as needed to accommodate passengers accessing the station. In general, station entrances should be easily accessible from nearby signalized intersections where pedestrian crosswalks are available (Section 3.3.4.2.4 – Other Modes) (LADOT). 39

Adequate pedestrian lighting should be provided at station entrances for safety and security (Section 3.3.4.2.4 – Other Modes) (LADOT). 40

The proposed underpass at Alameda and First Streets is expected to divert some local traffic to adjacent streets, such as Central Ave., impacting bicycle traffic in Little Tokyo. Potential bicycle impacts would be significant under this Alternative, but no mitigation measures are proposed in the DEIS/DEIR. 41

The DEIS/DEIR should include an analysis and discussion of the project's relationship to the draft 2010 LA City Bicycle Plan, which can be found at www.labikeplan.org. Station areas should be equipped with bicycle lockers and racks in order to create opportunities for first mile/last mile bicycle connections for travelers (Section 3.3.4.2.4 – Other Modes) (LADOT). 42

Construction would require temporary closure of lanes on Flower St., Second St., Alameda St., First St. and Hope St. in the vicinity of General Thaddeus Kosciuszko Way. This would temporarily reduce roadway capacity and potentially modify existing traffic patterns as drivers bypass congested areas. Although this potential 43

impact would be temporary, it would be significant and unavoidable. Similar to the construction methods used for the MTA Gold Line Extension to East Los Angeles project, traffic flow patterns should be re-routed appropriately with clearly signed and marked detours since travel times and intersection operating conditions along these roadways would be impacted (Section 3.3.5.1.2 – Traffic Circulation) (LADOT). 43 cont'd

Construction of the proposed Alameda St. portal north of Temple St. is a major concern since only one through travel lane in each direction would be maintained on Alameda St between Aliso St. and Second St. . during construction. This would be a potentially significant impact. Outside of this segment, all three through travel lanes in both directions on Alameda St. would remain open but would still be subject to intermittent closures (Section 3.3.5.1.2 – Traffic Circulation) (LADOT).

The southbound lane configuration at Alameda St. and Temple St. would consist of a shared through/right lane and a shared through/left lane. Consequently, travel times for vehicles traveling along this segment of Alameda St. would be expected to increase, and operating conditions for the intersection at Alameda St. and Temple St. are expected to deteriorate with increased delays. Existing signal phasing should be coordinated accordingly to split phasing to minimize conflicts between southbound left turns and the opposing northbound through movements and to prevent the formation of queues resulting from vehicles waiting for a gap in the opposing traffic to make a left turn (Section 3.3.5.1.2 – Traffic Circulation) (LADOT). 44

Under the Fully Underground LRT Alternative, three intersections would have a significant, adverse change in level of service, while three intersections would have a beneficial change in level of service. Many of the proposed mitigations are not acceptable to LADOT for the reasons described under General Comments, above. The mitigation measures proposed at the intersections of Flower St./Fourth St. and Flower Street/Fifth St. may be feasible; however, LADOT cannot accept them without reviewing conceptual drawings first. These drawings should indicate the proposed new lane dimensions and whether any on-street parking spaces would be eliminated. Street and sidewalk widths should be consistent with the new Downtown Street Standards adopted by the City Council last year (Section 3.3.5.2.2 – Traffic Circulation) (LADOT). 45

To accommodate pedestrian station entrances to the underground station at Fifth St., one traffic lane would be removed on the east side of Flower St. between Sixth St. and Fourth St. Intersection impacts should be mitigated per LADOT standards along this segment of Flower St. The proposed striping change at the intersection of Flower St. and Sixth St. is not recommended because it would create a trap lane for the #4 lane, which is currently striped as a shared through/right turn lane (Section 3.3.5.2.2 – Traffic Circulation) (LADOT).. 46

After construction of the station portals northeast of Alameda St. and First St., existing traffic lanes would be restored. However, the signalized intersection at First St. and Hewitt St. would be removed, eliminating the ability to cross First St. at that location. This is not identified as a significant impact but will affect local circulation patterns (Section 3.3.5.2.2 – Traffic Circulation) (LADOT). 47

No at-grade train operations would pass through the intersections of First St./Alameda St. and Alameda St./Temple St., and traffic signals would operate under that assumption (Section 3.3.5.2.2 – Traffic Circulation) (LADOT).. 48

Street and sidewalk widths should be consistent with the new Downtown Street Standards adopted by the City Council last year (Section 3.3.5.2.2 – Traffic Circulation) (LADOT). 49

Although this Alternative would be fully grade-separated, portions of the alignment would utilize existing roadway for underground station pedestrian entrances. Thirteen (13) metered parking spaces would be displaced along Flower St. between Fifth St. and Third St. The impact is considered to be less than significant because there are privately-owned parking garages in the vicinity and the project will improve transit access. These are not sufficient reasons to dismiss the significance of the impact, which should be mitigated with nearby replacement metered parking spaces (Section 3.3.5.2.3 – Parking) (LADOT). 50

The sidewalk width along Flower St. between Sixth St. and Third St. and along Second St. at the station entrances should be maintained or widened as needed to accommodate passengers accessing the station. In general, station entrances should be easily accessible from nearby signalized intersections where pedestrian crosswalks are available (Section 3.3.5.2.4 – Other Modes) (LADOT). 51

Signing, surveillance and physical barriers should be utilized at the tunnel portal on the site bounded by First St., Alameda St., Second St., and Central Ave. to reduce the potential for unauthorized pedestrian entry into the tunnel (LADOT). 52

In addition to addressing safety concerns, the project should support the City's goals to maintain existing pedestrian connections and to maintain and improve existing patterns of pedestrian circulation as much as possible on the streets. The project should avoid creating new impediments to pedestrian circulation (DCP). 53

Adequate pedestrian lighting should be provided at station entrances for safety and security (Section 3.3.5.2.4 – Other Modes) (LADOT). 54

Environmental and Mitigation

Pre and post video required, with rehabilitation or replacement required for damaged sewers, MH's, lateral connections and laterals (BOE). 55

Settlement

The settlement shall be limited to 0.25 inch and the following is required (BOE):

- Mitigate by relocating sewers, grouting and soil stabilization.
- Settlement detection required for all major and primary outfalls that are crossed, or paralleled.
- Surveyed settlement detection required for all small sewers and MHs crossed or paralleled. 56
- Cracked pipes, broken joints, induced sags in sewers are not acceptable.
- Replacement of clay sewer pipe damaged by tunnel or surface construction does not constitute a betterment.

Rehabilitation or replacement of damaged T-Lock protected sewers does not constitute a betterment.

Street Lighting

Street along and adjacent to a proposed LRT tracks and subway will require lighting improvements to meet current City of Los Angeles Standards. BSL will require installation of new lighting system in public areas that have no existing lighting before construction of the LRT. BSL will require increase of existing lighting levels for safety reasons. All new street lighting improvements will be installed with LEDs (light emitting diodes) light source (BSL) 57

Any major street work that takes place should give consideration to the impact of existing public lighting and requirements to future lighting improvements. Any modifications of the present street layout (stripping, parking lane removal, right of way acquisition, bike lane, etc.) and circulation of traffic/pedestrians most likely will involve redesign and reconstruction of the lighting system for the new configuration (BSL). 58

Any street/pedestrian lighting improvements that create new assessments or increase existing assessments to property owners will require the Proposition 218 process to take effect. This process not only requires community participation but also their approval throughout a ballot process. This process typically takes about 6 months to complete. The lighting assessment is paid by property owners through the County Property Tax Bill. Assessments must be confirmed by City Council before commencing construction of the street lighting system (BSL). 59

If the project impacts area that contain expensive Historical/Ornamental poles in the City of Los Angeles, these Historical/Ornamental street lights shall be retained and improved (refurbished and upgraded) in the proposed project area. If there are new street lights to be installed along with the existing Historical/Ornamental street lights, BSL will require new street lights for these area to match the existing Historical/Ornamental street lights (BSL). 60

Temporary street lighting is required as part of this project. Number of temporary units installed and the spacing between adjacent locations will match the existing street lighting system in service on a one for one basis. 61

Park and Ride facilities and parking lots design shall include public street pedestrian lighting improvements in and around facilities that meet current BSL standards. 62

Safety

During construction mitigation language should protect pedestrian and bicyclists routes. The routes should be provided for on all sides of streets. Sidewalk and street closures should be limited to late night hours. If sidewalk or street closures are required for longer periods of time, directional signage and lighting is to be maintained (DCP). 63

On pages 4-291 and 4-297, under Safety and Security, reference is made to other urban design methods as follows: "MTA would use other urban design methods to enhance pedestrian safety. This would include creating pedestrian queuing and refuge areas around proposed stations. Adding wide crosswalks would also enhance pedestrian mobility and safety. No disproportionate safety and security impacts are expected." Please describe, give examples or reference language that describes what is meant by "urban design methods" in this statement. Similar language is used on page 4-303, with respect to visual and aesthetic resources, stating that "urban design measures would incorporate the ventilation structure into the existing street environment in a compatible way." Please describe, give example or reference language that describes what is meant here (Section 4.17 – Environmental Justice) (DCP). 64

Land Use

For all the 2nd/Hope Station alternatives, MTA should eliminate the pedestrian bridge over Hope Street. While enhanced pedestrian facilities are desirable, a pedestrian bridge will take people off of the sidewalk and limit the vitality of the street environment. The 2nd and Hope station presents the opportunity to re-activate this area of Bunker Hill by introducing active uses that will enliven an area that is currently a dead zone and one that is pedestrian unfriendly because of an existing street network that is designed for cars rather than people. In addition to the reconfiguration of the street network in that area (proposed as part of the project), another design feature could be to design a crosswalk at Hope/GTK Way intersection and provide a stairway instead up to the planned plaza above GTK Way. This solution would ensure an active pedestrian presence on the street and still help to bridge the topography between Hope Street and Grand Avenue to create a direct pedestrian connection from the future station (DCP). 65

Pedestrian entrances for the 2nd/Hope Station should be located both at 2nd and Hope Streets and 3rd and Flower Streets to extend the reach of the station and allow users access from the north and the south and to help compensate for the substantial topographic changes on the station site (DCP). 66

A mid-block street crossing on Flower Street from Bunker Hill Towers (between 2nd and 3rd) and, potentially, a direct pedestrian undercrossing into the station are appropriate to improve pedestrian circulation from Figueroa Street and the concentration of residential and office uses to the west. Such a connection would align with and taking advantage of an existing pedestrian easement through the Bunker Hill Towers site, between Flower and Figueroa, helping to break down the scale of this large city block. The DEIS/EIR indicates that there are some property impacts to Bunker Hill Towers on the west side of Flower Street (to tennis courts and other facilities); however, the nature of these impacts is unclear. A clarification is requested (DCP). 67

Another important pedestrian facility and design consideration is the need for a connection from 3rd and Flower Streets (near the 3rd Street tunnel) to 3rd and Hope Streets atop Bunker Hill. This is a critical gap in the pedestrian network that constrains circulation in the area, since there are presently no east-west public walkways that link Flower to Hope between 2nd Street and 5th Street. A new pedestrian connection alongside the 3rd Street tunnel would not only facilitate improved pedestrian circulation Downtown, but also improve access to the proposed 2nd/Hope Station by giving users new access to the station from the south and west and helping to reduce distances for pedestrians to access the station. Pedestrian entrances at 2nd/ Hope and 3rd/Flower are necessary to provide access to users coming from both the north and the south. This pedestrian connection would provide another important linkage to the 3rd and Flower station entrance (DCP). 68

In addition to its primary role in assuring that Gold, Blue and Exposition Line trains are swiftly conveyed, we believe that the Regional Connector has an important local objective to serve as well, and that is to effectively connect the cluster of vital cultural 69

and civic institutions at the top of Bunker Hill—the Music Center, Disney Hall, the Colburn School of Music, the Museum of Contemporary Art, the future Broad art museum and the top of the Civic Center's "Great Park"--with the regional transit system. Great care should therefore be taken to insure that the Regional Connector's 2nd/Hope station portal connects patrons to these destinations in a manner appropriate to their prominence (CRA/LA). 69 cont'd

Multiple entrances at the 2nd/Broadway (Underground alternatives) station location are desirable to best serve transit users. Station entrances should be located at both at 2nd and Spring Streets and 2nd Street and Broadway (DCP). 70

In order to expand the reach of 2nd/Central Station (Fully Underground alternative) to users coming from various directions and to span this large block, pedestrian entrances to the station should be located at both 1st and Alameda Streets, and at 2nd Street and Central Avenue. Also, consider that 2nd and Alameda is the closest access point to the Arts District and the growing residential base there. In light of this, the 2nd Street entrance may be best located midblock between Central Avenue and Alameda Street, in order to improve access for Arts District residents and employees (DCP). 71

Given the ultimate potentials of the site that MTA will have acquired, we believe that the Little Tokyo Station should provide additional knockout panels that future development could take advantage of to connect transit patrons to 2nd Street as well (CRA/LA). 72

One potential way to minimize impact to historic resources in the vicinity of this station is to consider retaining and/or relocating the Senor Fish building in a manner that it can serve as a station entrance at 1st and Alameda (DCP). 73

Another important potential pedestrian improvement that will enhance the pedestrian orientation near the station is to consider how to minimize pedestrian crossing distance with the widening of 1st Street to accommodate tracks in center of street (DCP). 74

The intersection configuration proposed for the 1st and Alameda Street intersection for the 1st/Alameda (Underground Emphasis) alternative will limit pedestrian flow across the intersection. The proposed underpass on Alameda Street would make Alameda Street function like an automobile and truck expressway through the area and create an inhospitable pedestrian environment. The proposed pedestrian overcrossing would inhibit pedestrian activity at the street and present challenges to creating the active street environment that currently exists along 1st Street west of Alameda. This desirable environment has the potential to extend to the east side of 1st Street with development of the Mangrove Estates site at the northeast corner of 1st and Alameda Streets and with other proposed projects farther east on the south side of 1st Street (in particular redevelopment of the Megatoys site). The City's land use plans for the area aim to improve the connections and built form east and west of Alameda Street that allow for pedestrian friendly and active ground floor uses to create a vibrant, transit oriented, mixed use environment in proximity to the proposed transit station (DCP). 75

Concerns about the impacts to the Temple/Alameda (At-Grade Emphasis alternative) are similar to those discussed above in reference to the 1st/Alameda (Underground Emphasis alternative) (DCP). 76

Additionally, the City encourages MTA to retain the 5th and Flower Station. This proposed station is located between Bunker Hill and the Financial Core, both districts which contain a variety of intense land uses including office buildings, residential towers, hotels and the Central Library. The 5th and Flower Station can attract a wider array of transit users and relieve overcrowding at the 7th/MTA Center Station, which is currently the only station option for employees and residents of and visitors to these key Downtown districts. Land use plans under development for Bunker Hill will involve further infill and intensification of Bunker Hill with the goal of breaking down existing superblocks and creating a stronger streetwall, where appropriate, to foster a more pedestrian-friendly street environment. A station at 5th and Flower will be consistent with and help promote these long-term goals for the area. The City believes the station at 5th/Flower (All Alternatives) is an integral one because of all of the important land uses in close proximity and asks that MTA keep it in the final design (DCP). 77

The City asks that MTA consider additional measures to mitigate the impacts that At-Grade Emphasis Alternative would have to the historic 2nd Street tunnel when the line surfaces, requiring a new portal through the southern wall of the tunnel. Additional mitigations could include improvements to restore historic fabric, where missing. 78

In reference to potential operations-related mitigation measures on page 4-68, please modify the language as shown below (Section 4.4 – Visual and Aesthetic Impacts) (DCP). 79

- "Urban design measures would be developed" with DCP staff during preliminary engineering drawings for design of stations to integrate the LRT facilities such as station entrances, venting and emergency backup power stations into each community as appropriate.

- Urban Design elements will address enhancements in the public realm, station entrance location, entrance design, connection to bicycle and pedestrian circulation routes, integration into the surrounding area, way finding, catenary poles, materials, or station colors. MTA will coordinate with the DCP staff.

On pages 3-60 and 3-61, proposed mitigations for impacted intersections are summarized; however, there is not a clear discussion of how these mitigation measures would affect pedestrian and bicycle circulation after implementation. Please include a full discussion of possible impacts and mitigations (Section 3.4 – Mitigation Measures) (DCP). 80

Business and Significant Landmarks

While the Fully Underground (as well as the Underground Emphasis) Alternative substantially eliminates some of the serious impacts of the At-Grade Alternative, it will necessitate the dislocation of the present occupants of the block immediately south of Japanese American National Museum. While not as densely built up as some parts of Little Tokyo, there are nonetheless a good number of businesses that would be affected. A few are large, most are small; some are iconic, long-time parts of the community's fabric, some are more recent but nonetheless valued, and a few with considerable promise are just about to open after years of planning and investment. It is the opinion [of the City/of CRA/LA] that none of these businesses can afford to be permanently lost to the Little Tokyo community.

81

The City believes that the first priority for the Little Tokyo station portal is to make an effective connection with the civic and business assets along First Street. To effectively marshal the broad resources and expertise needed to retain, relocate and re-situate displaced businesses, to preserve those businesses affected by construction, and to effectively support and respond to resident concerns, the City requests that MTA commit to forming a joint MTA/City business retention and construction impact management team. Given that entities such as CRA have a long history in the Downtown community and will be continuing to exercise broad stewardship long after MTA has completed construction of the Regional Connector, we believe that such a team will be an essential strategy to realizing the Regional Connector with the minimum amount of physical damage and economic disruption (CRA/LA).

Construction

Circulation

While the potential construction impacts of the At-Grade Emphasis LRT Alternative would be temporary, they would be significant and unavoidable (Section 3.3.3.1.2 – Traffic Circulation). 82

Under the At-Grade Emphasis Alternative along Alameda Street, maintaining two through travel lanes in each direction during construction would require that the two-way left turn median be in the mid-block area, as would the exclusive right-turn and left-turn lanes at the intersection approaches. Northbound and southbound lanes along Alameda St. approaching Aliso St./Commercial St., Temple St. and First St. would consist of a shared through/right-turn lane and a shared through/left-turn lane. This proposed lane configuration creates the potential for vehicular conflicts between left turners and opposing through movements on Alameda St. The project should mitigate this impact by proposing to split the signal phasing to minimize the potential for operational conflicts and minimize the formation of queues by vehicles waiting for a gap in opposing traffic to make a left turn (LADOT). 83

During the final design phase of the project, site and street specific Worksite Traffic Control plans need to be completed (LADOT).

Plans should be developed in cooperation with LADOT to accommodate vehicular, pedestrian and bicycle movements (LADOT). 84

While this will achieve more efficient and much less disruptive transit operations, there will understandably be a concern as to how to best contain the short-term disruptions from station and tunnel construction (CRA/LA).

Design Standards

Because of the new, higher-density residential development recently built around the site of the Little Tokyo and Bunker Hill stations, as well as potentially adjacent the Historic Core station, there will need to be very special attention given to the mitigation of noise and dust impacts from construction that might impact Downtown residents. In particular, as desirable as night-time construction activity might be, any night-time activity adjacent residential development must be very strictly controlled so that residents are not disrupted by noise, light and dust from construction activities. 85

The City would urge MTA to avoid in-street, cut-and-cover construction wherever bored tunnel construction might be feasibly accomplished. Where station construction invariably requires cut-and-cover construction, taking advantage of off-street construction opportunities should be pursued where possible. Where in-street cut-and-cover construction cannot be avoided, MTA is urged to apply the very best practices in 86

promptly covering over these construction operations with well-designed decking systems to minimize community and traffic disruption (CRA/LA). 86 cont'd

While the City strongly encourages MTA to fully exploit the potentials of bored tunneling to limit surface disruption to streets and adjacent properties, we would also urge that very special attention be given to preventing any subsidence of adjacent structures, utilities and improvements that might result from tunneling and MTA construction. This may be a particular concern at the intersection of 2nd and Central, where the Regional Connector tunnels have to make a very difficult turn; there may be any number of other locations of risk along the alignment as well and all should be evaluated for application of "best practice" counter measures (CRA/LA). 87

Spoil haul routes and procedures generally and from Little Tokyo station excavation particularly should be configured to minimize to the impacts on Downtown residents and businesses. To the extent possible, MTA should look to sites besides Little Tokyo without residential concentrations to remove tunnel spoil. CRA/LA staff would look forward to working closely with MTA contractors' site management teams on plans, programs and initiatives that will help minimize the adverse short-term effects of MTA construction (CRA/LA). 88

Construction impacts - within the City R/W, all cut and cover, street improvements, facility restorations, underground utility relocations, etc. will require to be restored to City Municipal Codes, Design Standards, Standard Plans, and special construction provisions such as Street S-470-0, Standard Street Dimensions, Special Order No. 003-0201, Requirements For Deep Excavation Construction And Installation of Tiebacks on Sites In or Adjacent To Public Ways, and Special Order No. 04-0408, Underground Utility Location Guidelines (BOE). 89

Haul Routes, currently the Transportation Construction Traffic Management Committee (TCTMC) Impact Area and the Street of Significances for this project has not been established at this time; however, we suggest the project staff to meet with the review committee members to discuss the potential haul routes and their requirements. 90

Road Closures and worksite traffic control plans are need to be reviewed by the TCTMC. Road closures may require the Board of Public Works approval and/or City Council approvals (BOE). 91

Numerous wet and dry utilities were not identified on the conceptual drawings (Appendix II Conceptual Engineering Drawings). This project will impact/disrupt the existing service to the users and utilities will need to be relocated. We would like to know the mitigation to the impact/disruption and how the utilities will be restored (BOE). 92

Attached are Bureau of Engineering current and future projects that are within the vicinity of the proposed alignments. Please review them for potential impacts to your project (BOE). 93

Concerns and Requirements:

This tunnel crosses major outfalls, primary sewers, and small sewers.

- This tunnel parallels primary sewers, small sewers.
- MTA needs to provide a detailed listing of all sewer crossing points. Each sewer segment should be identified by its upstream and downstream SIMMS number.
- MTA needs to provide a detailed listing of all sewer parallels. Each sewer segment should be identified by its upstream and downstream SIMMS number.
- MTA will need to include relocation, bypass, or support in place plans for all sewers impacted by station or other open pit construction.
- Use only City of Los Angeles approved materials for sewer construction or rehabilitation.
- Meet all requirements of the Master Cooperative Agreement between CLA and MTA including sewer encasement and relocation requirements.
- All existing sewer wye connections are to be replaced in sewers that are re-located.

94

All existing sewer wye connections are to be reinstated in sewers that are re-habilitated. Access to the sewer is a property right that runs with the land and may not be arbitrarily taken away without compensation (BOE).

Sewers are NOT foundations for anyone's construction. Bridge piers and all foundations shall be designed so that the influence line for soil loading shall pass below and outside of all sewer easements. The City will not accept any construction that requires the City to shore any future easement excavation to support exterior imposed loading, or to prevent damage to an outside structure which would have been obviated by extending the piers, foundations, piles or other support (BOE).

Sewer plans and detailed information may be obtained from the Navigate LA Website (BOE).

Sewer connection laterals are private sewers owned by the landowner. Access and maintainability may not be removed without approval and provision of an alternate means of maintenance access. Maintain access and maintainability for all HCs and HC laterals (BOE).

Structures or appurtenant features built over the sewer easement or right of way are considered to be temporary structures that may be moved or demolished for necessary sewer repair or maintenance. Any floor shall be built to span and bridge the sewer easement or right of way and to be self supporting with foundations extending below the sewer easement or right of way (BOE).

Plans prepared for sewer rehabilitation or replacement must be prepared with sewer system stationing, not with street stationing (BOE).

94 cont'd

Street Lighting

Temporary street lighting is required as a part of this project. Number of temporary units installed and the spacing between adjacent locations will match the existing street lighting system in service on a one for one basis (BSL). 95

Park and Ride facilities and parking lots design shall include public street and pedestrian lighting improvements in and around the facilities that meet current BSL standards (BSL). 96

Business Impacts

Provisions must be made in insure that these businesses not only survive the construction of the Regional Connector, but have the opportunity to prosper as before (CRA/LA). 97

In addition to those businesses due to be directly displaced by the Regional Connector's construction, there will likely be a fair number of businesses and property owners bordering significant Regional Connector construction that, absent significant counter-measures and mitigation initiatives, could be very seriously affected. These impacts are likely to be particularly pronounced around the Little Tokyo station block excavation as well as other cut-and-cover construction sites. It should be re-iterated that there is no basis for these businesses suffering disproportionately from the Regional Connector's construction and it is essential that broad and well-managed mitigation and counter measures be undertaken to preserve the health and viability of potentially affected businesses and properties during construction (CRA/LA). 98

Given the recent commitments for the new Broad art museum southwest of 2nd Street and Upper Grand Avenue, CRA/LA believes that a special working group needs to be convened to coordinate and integrate the design of the Bunker Hill station, the Upper Grand Avenue portal connection and the construction of this museum. While the joint County-City Grand Avenue Project's schedule is currently in abeyance, it is important that all of the Bunker Hill station's aspects fully anticipate and prepare for the 3.6 million square feet of mixed-used development to be centered on Upper Grand Avenue as identified in the Bunker Hill Design for Development (2008) and the Central City Community Plan (CRA/LA). 99

Other Comments

On pages 1-2, 1-23, and 1-32, please modify the language referencing local land use documents to specify: The adopted General Plan Framework Element, Central City Community Plan, Downtown Design Guidelines and Modified Street Standards (DCP). 100

The Office of Historic Resources concurs with the boundaries of the Area of Potential Effects (APE) determined through the Section 106 review process. Staff has also reviewed the exhaustive survey of conducted of buildings, structures, and sites within the APE and the findings made for historic resource evaluation. Of the various types of historic resources identified, Historic-Cultural Monuments (HCMs) are locally designated resources directly reviewed by the Office of Historic Resources and subject to CEQA review. Buildings and sites on the California Register of Historical Resources and/or National Register of Historic Places are also reviewed by the Office of Historic Resources and also subject to CEQA evaluation (DCP).

As the preferred alternative, the Fully Underground LRT Alternative appears to have the least significant impacts/adverse effects to identified historic resources. Notwithstanding the possibility of potential construction or operational impacts, the nature of this alternative being almost entirely below ground minimizes impact historic resources within the project area (DCP).. 101

However, under the Fully Underground LRT Alternative, the buildings and site most physically impacted occurs at 1st and Alameda in Little Tokyo, adjacent to the Little Tokyo National Historic Landmark District. The DEIS/EIR has determined that a c.1913 commercial building at 422 E. 1st Street is eligible for the California Register of Historical Resources (3CS). Under this alternative, the subject building would be acquired and demolished (DCP).

Section 4.12.1.3.4.1 (CEQA Impact Analysis for Historical Resources), states that "the property acquisition and subsequent demolition of the S. Kamada Restaurant, Atomic Café, Senor Fish, and Coast Imports Building would constitute a substantial adverse change that would impair the significance of the historical resource." Mitigation measures 4.12.1.4.1 (HABS/HAER photo-documentation) and 4.12.1.4.5 (Memorandum of Agreement) are cited to reduce the impacts to a less than significant level under CEQA (DCP).

However, Section 15126.4 of the California Environmental Quality Act (CEQA) states:

> In some circumstances, documentation of an historical resource, by way of historic narrative, photographs or architectural drawings, as mitigation for the effects of demolition of the resource will not mitigate the effects to a point where clearly no significant effect on the environment would occur. [14 CCR § 15126.4(b)]

Technical Assistance Series #1 of the California State Office of Historic Preservation (2001) further states that "in most cases the use of drawings, photographs, and/or displays does not mitigate the physical impact on the environment caused by demolition or destruction of an historical resource" (DCP).

A memorandum of agreement developed between the FTA and MTA in consultation with the California State Office of Historic Preservation can only address National Register-eligible historic resources anticipated to experience adverse effects. This memorandum of agreement would be unenforceable to address significant impacts to eligible historic resources under CEQA, such as this property. As such, it appears inappropriate to cite Mitigation Measure 4.12.1.4.5 as sufficient mitigation to offset the demolition of this building (DCP).

101 cont'd

Although not the preferred alternative, the At-Grade Emphasis Light Rail Transit (LRT) Alternative would adversely affect the 2nd Street tunnel (constructed 1924), found to be eligible for the National Register of Historic Places. Beyond the potential mitigation measures cited in Sections 4.12.1.4.2-5, the Office of Historic Resources suggests exploring a mitigation measure that would restore missing architectural elements to this historic resource, particularly its balustrade and light fixtures. Similar mitigation measures and reconstruction efforts have been implemented with projects involving historic bridges in the City of Los Angeles (DCP).

102

Appendix

Please describe, give examples or reference language that describes what is meant by "urban design enhancements" to be used 1,000 feet around station and portals, as indicated on pages 7, 33, 52, and 55 (Appendix K: Description of Construction) (DCP). 103

Mirroring the CEQA analysis discussion involving mitigation measures for impacts on historic resources, in Appendix X (Cultural Resources-Built Environment Technical Memorandum Section), mitigation measures MM-BE-1 (HABS/HAER documentation) and MM-BE-5 (Memorandum of Agreement) are cited to reduce the impacts to a less than significant level under CEQA. [Page 161] (DCP).

The Office of Historic Resources is compelled to point out the need for clarification with the tables included in the Cultural Resources-Built Environment Technical Memorandum section (DCP). 104

The heading "No Historic Properties Affected" appears to be referring only to National Register of Historic Places-eligible resources. As such, the historic resource located at 1st and Alameda and its proposed demolition are cited as not being a historic property even though it is cited as eligible for the California Register of Historical Resources. This table should be clarified to avoid any possible misconception of how the project is defining "historic properties" (DCP).

The Bureau of Engineering has reviewed all the plans and drawings in the EIR/EIS document and the following comments need to be addressed in the Final Environmental document (BOE): 105

- Drawings C-101 to C106, C-301 to C-306, C-401 to C-405, C-501 to C-505
    - Please call out all active & abandoned utility crossings in profiles. See City as-builts and substructure maps.
    - Call out all active & abandoned SD & Sewer ownership and as-built number. 106

- Use the following substructure maps for reference:

Sub-96-14	Sub-77-15
Sub-96-10	Sub-78-8
Sub-96-6	Sub-78-9
Sub-96-2	Sub-78-10
Sub-75-15A	Sub-79-4
Sub-75-15	Sub-79-5
Sub-75-12	Sub-79-7
Sub-75-8	Sub-80-1
Sub-75-9	Sub-80-2
Sub-77-4	Sub-80-3
Sub-77-5	Sub-63-11
Sub-77-6	Sub-63-10
Sub-129-213-8	Sub-63-5

107

- Use the MTA Gold Line Eastside Extension Composite Utilities Rearrangement Plan As-Builts (U-105, U-106, U-107, U-201) for the utilities located along 1st, Alameda and Temple Street.

108

- Drawings C-101, C-301, C-401, C-501
    - Several conflicting SD are missing in the plan and profile. Please show and call out the existing 33" RCP in Flower St. Show and call out the existing 30" RCP in Wilshire Blvd, 24" & 53" RCP along 6th St, 12" & 24" RCP along 5th St and 72" RCP in 4th St.

109

    - Several conflicting Sewers are missing in the plan and profile. Please show and call out the existing 21, 20 & 15-inch sewer along Flower Street. Show and call out the existing 12" sewer along Wilshire, 8 & 10" sewers along 6th St, 12 & 15" sewer along 5th St and 30" sewer in 4th St.

110

    - Please note that the proposed alignment conflicts w/ existing 20", 21" and 30" primary sewers.

111

    - SD shown in profile is 84" RCP between 6th St & 5th St, and 72" RCP from 5th to 4th St. Please call out accordingly.

112

- Drawings C-102
    - Several conflicting SD are missing in the plan and profile. Please show and call out the existing 18" RCP in Olive St, 33" RCP in Flower St, 45" & 24" RCP in 3rd Street, 24" in Hope St, two-12" RCP in 2nd St and the two-24" RCP in Grand Ave.

113

- Show and call out the conflicting 15" sewer in Flower St and the 8" Sewer in 3rd Street. 114

- Drawings C-302, C-402, C-502 115
  - Call out 2nd Street on plan
  - Several conflicting SD are missing in the plan and profile. Please show and call out the existing 33" RCP in Flower St, 45" & 24" RCP in 3rd Street, 24" in Hope St, two-12" RCP in 2nd St and the two-24" RCP in Grand Ave. 116
  - Show and call out the conflicting 15" sewer in Flower St and the 8" Sewer in 3rd Street. 117

- Drawings C-103, C-303, C-403, C-503 118
  - Please change New Otani Hotel to it's current name, Kyoto Grand Hotel.
  - Call out Los Angeles St on plan. 119
  - The existing SD shown in the profile is a 10'-3" RCArch btwn Hill St and Broadway St, 9.5'x11.5' RCB btwn Broadway St and Los Angeles St, and 11.5'x13' RCB east of Los Angeles St. Please call out accordingly. 120
  - Call out the existing 14" & 31" RCP along 2nd Street and the 18" & 20" RCP crossings on Olive and Hill St. 121
  - Please note that the proposed alignment conflicts w/ an 18" sewer in Spring St, 21" sewer in Main St and a 36" sewer in Los Angeles St. Show and call out these primary sewers. 122
  - Several conflicting minor sewers are missing from the plan and profile. Show and call out the 8, 12 & 14" sewer along 2nd St, 8 & 12" sewer in Hill St, two-12" sewers in Broadway and the 16" sewer in Los Angeles St. 123

- Drawing C-104 124
  - Please show and call out the existing 15" RCP in Main St, 24" RCP in Temple St, and 36 & 42" RCP in Los Angeles St.
  - Please show and call out the existing 18" sewer in Main St and the 12 & 30" sewers in Los Angeles St. Please note the possible conflict with primary sewers in this proposed alignment. 125

- Drawings C-304, C-404, C-504
  - Please show and call out the existing SD and two-8" sewers running parallel to the 11.5'x13' RCB in 2nd Street — 126
  - Does the proposed alignment conflict with the 24" RCP and 8 & 10" sewers running along 1st Street? If so, please show and call out. — 127
  - Identify the location of Banning Street. There are several utilities located in Banning Street that would conflict with the proposed alignment. There is a 15" RCP and 8 & 15" sewer in Banning Street, which connect into the storm drain and sewer lines along Alameda Street. Please show and call out Banning Street and all utilities that would conflict with the proposed alignment on the plan and profile. — 128
- Drawing C-105
  - Please call out the 14 & 16" sewer in Alameda St and 8" sewer in Temple St. — 129
  - Please call out the 18 & 24" RCP in Temple St and 75 & 77" RCP in Alameda Street — 130
- Drawing C-305
  - Please show and call out the two 8" sewers & 44" RCP in 2nd St in the plan and profile. — 131
  - Correct the text for "Mucking Pit" on plan so that it is clearly readable. — 132
- Drawings C-405, C-505
  - Correct that stationing in the titleblock to accurately reflect the stationing shown on the drawing. — 133
  - Correct the matchline call out on the profile to reference Sta 87+00 on DWG C-404. — 134
  - Does the proposed alignment conflict with the 14" sewer in Alameda St? If so, please show and call out. — 135
  - Identify the location of Turner Street. There are several utilities located in Turner Street that would conflict with the proposed alignment. There is an 8" sewer in Turner Street, which connects into the sewer lines along Alameda Street. Please show and call out Turner Street and all utilities that would conflict with the proposed alignment on the plan and profile. — 136

- Drawing C-106
    - Please call out the 16" sewer & 77" RCP in Alameda St in the plan and profile

137

- Drawing C-306
    - Identify the location of Turner Street. There are several utilities located in Turner Street that would conflict with the proposed alignment. There is an 8" sewer in Turner Street, which connects into the sewer lines along Alameda Street. Please show and call out Turner Street and all utilities that would conflict with the proposed alignment on the plan and profile.

138

    - Identify the location of Banning Street. There are several utilities located in Banning Street that would conflict with the proposed alignment. There is a 15" RCP and 8 & 15" sewer in Banning Street, which connect into the storm drain and sewer lines along Alameda Street. Please show and call out Banning Street and all utilities that would conflict with the proposed alignment on the plan and profile.

139

AL3

Responses to Comments from the City of Los Angeles, Moore et. al., Gary Lee

Response to Comment AL3-1

Thank you for your comment. Support for the Fully Underground LRT Alternative is noted. The Metro Board of Directors voted on October 28, 2010 to designate the Fully Underground LRT Alternative as the Locally Preferred Alternative. Please refer to Responses to Comments AL3-2 through AL3-139, below, for detailed responses regarding concerns raised by the commenter about the At-Grade Emphasis LRT and Underground Emphasis LRT alternatives.

Response to Comment AL3-2

Thank you for your comment. Metro also looks forward to coordinating with the City of Los Angeles during the design phase of the project.

Response to Comment AL3-3

The urban design assessment of the two alternatives carried forward from the Initial Screening of Alternatives was not based on set criteria. Instead it was an assessment of land use regulations, transit connections, vehicular and pedestrian circulation patterns, and proposed local development along each alignment to aid in the development of urban design concepts of the alignments.

Response to Comment AL3-4

Thank you for your comment. Support for the Fully Underground LRT Alternative is noted. The Metro Board of Directors voted on October 28, 2010 to designate the Fully Underground LRT Alternative as the Locally Preferred Alternative.

Response to Comment AL3-5

Thank you for your comment. Support for the underground station in Little Tokyo is noted. The Metro Board of Directors voted on October 28, 2010 to designate the Fully Underground LRT Alternative as the Locally Preferred Alternative.

Response to Comment AL3-6

Thank you for your comment. These concerns regarding the At-Grade Emphasis LRT and Underground Emphasis LRT Alternatives were addressed in the Draft EIS/EIR. However, the features of the At-Grade Emphasis LRT and the Underground Emphasis LRT Alternatives mentioned in the comment are not proposed as part of the Fully Underground LRT Alternative. Support for the Fully Underground LRT Alternative is noted. The Metro Board of Directors voted on October 28, 2010 to designate the Fully Underground LRT Alternative as the Locally Preferred Alternative.

Response to Comment AL3-7

This statement is correct. Comment acknowledged.

Response to Comment AL3-8

Comment acknowledged. Please refer to Chapter 3, Transportation Impacts and Mitigation, and Section 4.15, Safety and Security, of the Draft EIS/EIR and this Final EIS/EIR for traffic, safety,

and security impacts associated with the At-Grade Emphasis LRT Alternative. The Metro Board of Directors voted on October 28, 2010 to designate the Fully Underground LRT Alternative as the Locally Preferred Alternative. The Locally Preferred Alternative is grade-separated. Therefore, the concerns stated in this comment regarding the At-Grade Emphasis LRT Alternative are not an issue under the Locally Preferred Alternative.

Response to Comment AL3-9

Regional Connector stations would integrate pedestrian and bicycle access through urban design to provide multi-modal alternatives to driving. The introduction of new light rail service in the vicinity of the affected intersections would offset some of the impacts of reduced level of service by providing enhanced transit access. No park and ride facilities would be constructed as part of the Regional Connector project.

Response to Comment AL3-10

Design drawings of the mitigation measures prepared during the preliminary engineering phase of the project will be confirmed during the final design phase for the Locally Preferred Alternative. These drawings will highlight the feasibility of the mitigation measures. Once these drawings are prepared, they will be distributed to the Los Angeles Department of Transportation (LADOT) for review and comment. The drawings will take into consideration the new Downtown Street Standards. Continuous coordination with LADOT will take place throughout the design process.

Response to Comment AL3-11

At the October 28, 2010 meeting, the Metro Board of Directors designated the staff recommended Fully Underground LRT Alternative as the Locally Preferred Alternative for further study in this Final EIS/EIR. Mitigation measures for the significantly impacted intersections of the alternatives that were not designated are no longer applicable and will not be considered further. Design drawings for the mitigation measures of the Locally Preferred Alternative prepared during the preliminary engineering phase of the project will be confirmed during final design. These drawings will be distributed to LADOT for review and comment. As previously noted, the drawings will take into consideration the new Downtown Street Standards.

Response to Comment AL3-12

The Fully Underground LRT Alternative without the Flower/5th/4th Street station, which is the Locally Preferred Alternative, would not significantly impact any intersections after mitigation. Design drawings prepared for these locations during the preliminary engineering phase of the project will be confirmed during final design. Once these drawings are prepared, they will be distributed to LADOT for review and comment. Continuous coordination with LADOT will take place throughout the design process.

Response to Comment AL3-13

The mitigation measures for the Locally Preferred Alternative would result in an improved level of service. The comment has been noted and the Locally Preferred Alternative mitigation measures will be confirmed during final design, and the extent of physical improvements that can be achieved within the existing right-of-way will also be confirmed.

Response to Comment AL3-14

As previously noted, the mitigation measures for the Locally Preferred Alternative would result in an improved level of service. The comment has been noted and the Locally Preferred Alternative mitigation measures will be confirmed in the final design phase of the project, and the extent of improvements that can be achieved within the existing right-of-way to meet the LADOT Traffic Study Guidelines will also be confirmed.

Response to Comment AL3-15

At the October 28, 2010 meeting, the Metro Board of Directors designated the staff recommended Fully Underground LRT Alternative as the Locally Preferred Alternative for further study in this Final EIS/EIR. Mitigation measures for the significantly impacted intersections of the alternatives that were not designated, such as the TSM Alternative, are no longer applicable and will not be carried forward for further consideration.

Response to Comment AL3-16

At the October 28, 2010 meeting, the Metro Board of Directors designated the staff recommended Fully Underground LRT Alternative as the Locally Preferred Alternative for further study in this Final EIS/EIR. Mitigation measures for the significantly impacted intersections of the alternatives that were not designated, such as the At-Grade Emphasis LRT Alternative, are no longer applicable and will not be carried forward for further consideration.

Response to Comment AL3-17

The impacts of the At-Grade Emphasis LRT Alternative operation on 2nd Street were documented in Section 3.3.3.2.2 of the Draft EIS/EIR and this Final EIS/EIR. The Metro Board of Directors voted on October 28, 2010 to designate the Fully Underground LRT Alternative as the Locally Preferred Alternative, which does not involve at-grade tracks on 2nd Street.

Response to Comment AL3-18

The impacts of the At-Grade Emphasis LRT Alternative operation were documented in Section 3.3.3.2.2 of the Draft EIS/EIR and this Final EIS/EIR. The Metro Board of Directors voted on October 28, 2010 to designate the Fully Underground LRT Alternative as the Locally Preferred Alternative, which would not involve any new grade crossings.

Response to Comment AL3-19

Metro notes the City's concern regarding restriping on Flower and 2nd Streets for the At-Grade Emphasis LRT Alternative and the Underground Emphasis LRT Alternative. These alternatives are not being pursued for further study. The Metro Board of Directors voted on October 28, 2010 to designate the Fully Underground LRT Alternative as the Locally Preferred Alternative. Metro will work with LADOT on developing street restoration plans that are consistent with the goals of the City's approved plans at that time. It is recommended that the proposed bike plan be maintained to provide connectivity and improve access to the transit station.

Response to Comment AL3-20

Urban design work is being performed as part of the preliminary engineering process. Examples include landscaped plazas around station entrances that enhance the pedestrian environment,

lighting configurations to enhance safety, and bicycle parking. Entrances would be oriented toward major intersections where possible.

Response to Comment AL3-21

Regional Connector stations would integrate pedestrian and bicycle access through urban design to provide multi-modal alternatives to driving. The introduction of new light rail service in the vicinity of the affected intersections would offset some of the impacts of reduced level of service by providing enhanced transit access. No park and ride facilities would be constructed as part of the Regional Connector project.

Response to Comment AL3-22

The mitigation measures proposed in Section 3.5.2.2 of the Draft EIS/EIR and Section 3.4 of this Final EIS/EIR would be implemented in conjunction with Metro's overarching goals for station design, which include pedestrian and bicycle connections, bicycle parking where feasible, and connections to nearby bus lines. Metro will continue its ongoing coordination with LADOT on traffic signal related mitigation measures included in the Mitigation Monitoring and Reporting Program for the Locally Preferred Alternative (Chapter 8) of this Final EIS/EIR.

Response to Comment AL3-23

The Draft EIS/EIR and this Final EIS/EIR contained analysis of the project's relationship with all applicable adopted plans. Metro has reviewed the draft LA City Bicycle Plan and finds no inconsistencies with the Regional Connector. Bicycle access would be incorporated into the new Regional Connector stations, with bicycle lockers and racks provided where feasible, as noted in Section 3.3.5.2.4 of the Draft EIS/EIR and this Final EIS/EIR.

Metro considers the bicycle system a key component of the transportation system. Although the draft LA City Bicycle Plan can be mentioned in this Final EIS/EIR, an impact analysis cannot be based on a plan that has not been approved. As the project continues, Metro will continue to develop street restoration plans and station plans which LADOT will review. These plans will take into consideration riders accessing the system by bike by including bike racks and lockers at the stations, means to provide easy access for bicyclists from the platform, mezzanine and plaza areas, and restoration of streets based upon approved plans.

Response to Comment AL3-24

During the final design phase of the project, Metro will develop Worksite Traffic Control Plans in conjunction with LADOT as requested.

Response to Comment AL3-25

Metro would develop detours around construction areas in conjunction with LADOT, and would use visible signage to direct traffic. These temporary roadway closures are associated with the At-Grade Emphasis LRT Alternative. The Metro Board of Directors voted on October 28, 2010 to designate the Fully Underground LRT Alternative as the Locally Preferred Alternative.

Response to Comment AL3-26

Protective measures would be implemented as needed at tunnel portals to prevent pedestrian intrusion. The fully underground Locally Preferred Alternative would have minimal opportunities

for unauthorized pedestrian crossings of the tracks because the tracks would be running in tunnels as opposed to on the street. A tunnel portal at 3rd and Flower Streets is part of the At-Grade Emphasis LRT Alternative. The Metro Board of Directors voted on October 28, 2010 to designate the Fully Underground LRT Alternative as the Locally Preferred Alternative. The Broad Art Foundation Museum, currently under construction, is projected to include a plaza above General Thaddeus Kosciuszko Way connecting to Upper Grand Avenue. In order to provide access from the 2nd/Hope Street station to Upper Grand Avenue, an elevator would be built as part of the Locally Preferred Alternative from the station entrance to the plaza if one is not already provided. If the plaza is not built as part of the Broad Art Foundation Museum, a pedestrian connection (such as a pedestrian bridge) would be built as part of the Locally Preferred Alternative from the elevator to Upper Grand Avenue.

Response to Comment AL3-27

The Locally Preferred Alternative does not include a station on Flower Street in this location.

Response to Comment AL3-28

The fully underground Locally Preferred Alternative would have minimal opportunities for unauthorized pedestrian crossings of the tracks because the tracks would be running in tunnels as opposed to on the street. The at-grade crossing at Temple and Alameda Streets is part of the At-Grade Emphasis LRT Alternative. The Metro Board of Directors voted on October 28, 2010 to designate the Fully Underground LRT Alternative as the Locally Preferred Alternative.

Response to Comment AL3-29

Metro agrees with this comment. Metro supports the City of Los Angeles' goals to maintain existing pedestrian connections and to maintain and improve existing patterns of pedestrian circulation.

Response to Comment AL3-30

The reduction in roadway capacity and potential adverse effect on bicycles access associated with the At-Grade Emphasis LRT Alternative was documented in Section 3.3.3.2.4 of the Draft EIS/EIR and this Final EIS/EIR. This alternative is not being pursued for further study. The Metro Board of Directors voted on October 28, 2010 to designate the Fully Underground LRT Alternative as the Locally Preferred Alternative.

Response to Comment AL3-31

The loss of parking spaces would be offset by the introduction of the new light rail service and stations into the area. These impacts pertain to the At-Grade Emphasis LRT Alternative. The Metro Board of Directors voted on October 28, 2010 to designate the Fully Underground LRT Alternative as the Locally Preferred Alternative.

Response to Comment AL3-32

Metro will develop Worksite Traffic Control Plans in conjunction with LADOT as requested.

Response to Comment AL3-33

Although the Underground Emphasis LRT Alternative will not be constructed, any detours associated with construction of the Locally Preferred Alternative would utilize visible signage and would be marked appropriately.

Response to Comment AL3-34

Comment noted. These impacts were discussed in Section 3.3.4.1.2 of the Draft EIS/EIR and this Final EIS/EIR as indicated in the comment. Metro will continue its ongoing coordination with LADOT on any signal phasing modifications required for the Regional Connector. The impacts discussed pertain only to the Underground Emphasis LRT Alternative. The Metro Board of Directors voted on October 28, 2010 to designate the Fully Underground LRT Alternative as the Locally Preferred Alternative.

Response to Comment AL3-35

The Fully Underground LRT Alternative without the Flower/5th/4th Street station was designated as the Locally Preferred Alternative. Metro would construct an enhanced pedestrian walkway with landscaping, wayfinding signage, art features, and amenities aimed at improving pedestrian experience and safety. These improvements would facilitate and enhance access from the 4th and Flower Streets area to the existing 7th Street/Metro Center Station entrance at 7th and Flower Streets. Metro will continue coordination with LADOT regarding any traffic lane removal necessary for these improvements, which would be within the impact envelope described in the Draft EIS/EIR.

Response to Comment AL3-36

The analysis in Section 3.3.4.2.2 of the Draft EIS/EIR and this Final EIS/EIR included these traffic diversions, as indicated in the last sentence of the section's first paragraph. These impacts pertain to the Underground Emphasis LRT Alternative. The Metro Board of Directors voted on October 28, 2010 to designate the Fully Underground LRT Alternative as the Locally Preferred Alternative.

Response to Comment AL3-37

The loss of parking spaces would be offset by the introduction of the new light rail service and stations into the area. These impacts pertain to the Underground Emphasis LRT Alternative. The Metro Board of Directors voted on October 28, 2010 to designate the Fully Underground LRT Alternative as the Locally Preferred Alternative.

Response to Comment AL3-38

The fully underground Locally Preferred Alternative would have minimal opportunities for unauthorized pedestrian crossings of the tracks because the tracks would be running in tunnels as opposed to on the street. The at-grade crossing at 1st and Alameda Streets is part of the Underground Emphasis LRT Alternative. The Metro Board of Directors voted on October 28, 2010 to designate the Fully Underground LRT Alternative as the Locally Preferred Alternative.

Response to Comment AL3-39

The Locally Preferred Alternative does not include a station on Flower Street in this location. Sufficient space along 2nd Street has been identified for station entrances and pedestrian access. Station entrances will be designed for easy access.

Response to Comment AL3-40

As part of project design, adequate pedestrian lighting would be provided at station entrances.

Response to Comment AL3-41

The reduction in roadway capacity at 1st and Alameda Streets, and the potential adverse effect on bicycles access associated with the Underground Emphasis LRT Alternative was documented in Section 3.3.4.2.4 of the Draft EIS/EIR and this Final EIS/EIR. This alternative is not being pursued for further study. The Metro Board of Directors voted on October 28, 2010 to designate the Fully Underground LRT Alternative as the Locally Preferred Alternative.

Response to Comment AL3-42

Please refer to Response to Comment AL3-23, above.

Response to Comment AL3-43

Temporary lane closures would be provided during construction, and would temporarily reduce roadway capacity. Drivers would likely divert to parallel streets to avoid the construction areas. Detours would be clearly marked and developed in conjunction with LADOT. Metro agrees that these construction impacts would be significant and unavoidable, which was discussed in Section 3.3.5.1.2 of the Draft EIS/EIR and this Final EIS/EIR as noted.

Response to Comment AL3-44

Comment noted. Mitigation measures for these impacts are provided in Section 3.4.1.2 of the Draft EIS/EIR and the Mitigation Monitoring and Reporting Program for the Locally Preferred Alternative (Chapter 8) of this Final EIS/EIR.

Response to Comment AL3-45

The comment is noted and design drawings prepared for these three intersection locations during the preliminary engineering phase of the project will be confirmed during final design. The drawings will reflect the issues indicated and raised by LADOT including consistency with the goals of the new Downtown Street Standards. Drawings will continue to be distributed to LADOT staff for review and comment. Continuous coordination with LADOT will take place throughout the design process.

Response to Comment AL3-46

At the October 28, 2010 meeting, the Metro Board of Directors designated the Fully Underground LRT Alternative without the Flower/5th/4th Street station as the Locally Preferred Alternative. However, Metro would construct an enhanced pedestrian walkway with landscaping, wayfinding signage, art features, and amenities aimed at improving pedestrian experience and safety. These improvements would facilitate and enhance access from the 4th and Flower Streets area to the existing 7th Street/Metro Center Station entrance at 7th and Flower

Streets. Metro will work with LADOT on developing street restoration plans that are consistent with the goals of the City's approved plans at that time.

Response to Comment AL3-47

The original Metro Gold Line Eastside Extension environmental document did not propose the signalization of the 1st and Hewitt Streets intersection. The signal was added during the construction phase of the project to accommodate left turns in and out of the Mangrove property. In addition, the proposed LRT alignment for the Locally Preferred Alternative would daylight on 1st Street between Alameda and Garey Streets, thus preventing the ability to cross 1st Street at Hewitt Street. Since there is currently no access to the Mangrove property at Hewitt Street, elimination of the signal and the prohibition of left turns is not considered a significant impact and would not affect local circulation patterns. Left turns from 1st Street to Hewitt Street can be accommodated by using Vignes or Alameda Streets followed by 2nd Street. Right-in, right-out operations would also be maintained to provide access to the Mangrove property.

Response to Comment AL3-48

Comment acknowledged.

Response to Comment AL3-49

Comment acknowledged. Metro will coordinate with the City of Los Angeles to ensure that streets and sidewalks associated with construction of the Locally Preferred Alternative are consistent with the goals of the new Downtown Street Standards.

Response to Comment AL3-50

Metro believes that the privately-owned parking garages have sufficient capacity to absorb the 13 displaced metered parking spaces. It is almost certain that far more than 13 people would switch from driving to transit once the new light rail service is introduced, thereby offsetting the demand for these 13 metered parking spaces.

Response to Comment AL3-51

The Locally Preferred Alternative does not include a station on Flower Street in this location. Sufficient space along 2nd Street has been identified for station entrances and pedestrian access. Station entrances will be designed for easy access.

Response to Comment AL3-52

Mitigation measures confirmed in the Mitigation Monitoring and Reporting Program for the Locally Preferred Alternative (Chapter 8) of this Final EIS/EIR include measures to reduce the potential for unauthorized pedestrian entry into the tunnel, such as signage, surveillance, and physical barriers. In addition, design of the Locally Preferred Alternative includes features to increase safety and security.

Response to Comment AL3-53

Comment acknowledged. Metro supports the City of Los Angeles' goal to maintain existing pedestrian connections and to maintain and improve existing patterns of pedestrian circulation as much as possible on City streets. To the extent feasible, design of the Locally Preferred Alternative avoids creating new impediments to pedestrian circulation.

Response to Comment AL3-54

Comment acknowledged. Security lighting would be provided at station entrances as part of the Locally Preferred Alternative.

Response to Comment AL3-55

Comment noted. This will be placed within the Special Provisions (a section in the construction contract documents) as the design is developed.

Response to Comment AL3-56

Comment noted. This will be placed within the Special Provisions (a section in the construction contract documents) as the design is developed.

Response to Comment AL3-57

Metro will work with City Departments including LADOT, Los Angeles Bureau of Engineering (LABOE), and Los Angeles Bureau of Street Lighting (BSL) among others, to develop appropriate street plans both for construction activities and for final restorations. Plans will be submitted to the City for review during the development of the design. Metro will utilize LED lights and provide enhanced lighting around stations per concurrence with the City.

Response to Comment AL3-58

As part of construction of the Locally Preferred Alternative, redesign and reconstruction of the lighting system will occur as necessary.

Response to Comment AL3-59

No new or increased assessments are anticipated. Metro will comply with all applicable state requirements regarding community participation and approvals for street lighting.

Response to Comment AL3-60

At this time, Metro does not anticipate that construction of the Locally Preferred Alternative would affect any existing Historic/Ornamental poles nor would new street lights be installed along with existing Historic/Ornamental street lights in the project area. However, Metro will be consistent with the goals of the City of Los Angeles Department of Public Works, Bureau of Street Lighting criteria as appropriate.

Response to Comment AL3-61

During construction, temporary street lighting would be required in areas where existing street lighting fixtures need to be removed to accommodate activities. Metro will work with the City to meet the City's standards for lighting levels at particular locations where permanent street lights are removed. Physical constraints may not allow for temporary units to be installed to match the existing location; however, number of units and locations would be installed to provide required lighting per the City's standards.

Response to Comment AL3-62

No park and ride facilities are proposed under the Locally Preferred Alternative. Therefore, no further response is required.

Response to Comment AL3-63

Metro would maintain pedestrian and bicycle routes to the fullest extent feasible throughout the construction process. Some sidewalk and street closures would be necessary during daytime hours as well as at night. Detours would be clearly marked, and adequate street lighting would be provided to ensure safety.

Response to Comment AL3-64

As indicated in Section 4.15, Safety and Security, of the Draft EIS/EIR and this Final EIS/EIR, urban design methods would include station and pedestrian pathway lighting leading to/from sidewalks to avoid shadows, adequate pedestrian queuing and refuge areas and wide crosswalks in areas immediately around proposed stations, and monitoring equipment at all proposed LRT stations. These methods will be confirmed for the Locally Preferred Alternative during the final design phase.

Response to Comment AL3-65

The Broad Art Foundation Museum, currently under construction, is projected to include a plaza above General Thaddeus Kosciuszko Way connecting to Upper Grand Avenue. In order to provide access from the 2nd/Hope Street station to Upper Grand Avenue, an elevator would be built as part of the Locally Preferred Alternative from the station entrance to the plaza if one is not already provided. If the plaza is not built as part of the Broad Art Foundation Museum, a pedestrian connection (such as a pedestrian bridge) from the elevator to Upper Grand Avenue would be constructed as part of the Locally Preferred Alternative in order to facilitate pedestrian circulation to and from Bunker Hill. If the pedestrian connection is built as part of the Locally Preferred Alternative, Metro will work with community stakeholders throughout the design process to ensure that the bridge contributes to the vitality of the street environment rather than detract from it.

Response to Comment AL3-66

Station entrances are proposed at both 2nd and Hope and 3rd and Flower Streets. The Broad Art Foundation Museum, currently under construction, is projected to include a plaza above General Thaddeus Kosciuszko Way connecting to Upper Grand Avenue. In order to provide access from the 2nd/Hope Street station to Upper Grand Avenue, an elevator would be built as part of the Locally Preferred Alternative from the station entrance to the plaza if one is not already provided. If the plaza is not built as part of the Broad Art Foundation Museum, a new pedestrian connection (such as a pedestrian bridge) from the 2nd/Hope Street station elevator entrance to Upper Grand Avenue would be constructed as part of the Locally Preferred Alternative, and would provide a pedestrian connection from the 2nd/Hope and 3rd/Flower areas to the top of Bunker Hill.

Response to Comment AL3-67

Metro included multiple options in the Draft EIS/EIR for connecting the 2nd/Hope Street station to the Bunker Hill Towers complex. Placing a station entrance on the Bunker Hill Towers side would require removal of one or two tennis courts. As such, a surface crosswalk was proposed as a way to avoid this impact and still provide access to the complex.

Response to Comment AL3-68

Station entrances are proposed at both 2nd and Hope and 3rd and Flower Streets. The Broad Art Foundation Museum, currently under construction, is projected to include a plaza above General Thaddeus Kosciuszko Way connecting to Upper Grand Avenue. In order to provide access from the 2nd/Hope Street station to Upper Grand Avenue, an elevator would be built as part of the Locally Preferred Alternative from the station entrance to the plaza if one is not already provided. If the plaza is not built as part of the Broad Art Foundation Museum, a new pedestrian connection (such as a pedestrian bridge) from the 2nd/Hope Street station elevator entrance to Upper Grand Avenue would be constructed as part of the Locally Preferred Alternative, and would provide a pedestrian connection from the 2nd/Hope and 3rd/Flower areas to the top of Bunker Hill.

Response to Comment AL3-69

Comment acknowledged. During preparation of this Final EIS/EIR, Metro held meetings with community groups and identified municipal leaders to guide them in the decision-making process as it relates to the proposed station locations, alignment options, and anticipated mitigation measures. Community input during these meetings has been taken into account in the refinement of the Locally Preferred Alternative which is presented in this Final EIS/EIR.

Response to Comment AL3-70

Comment acknowledged. Station entrances at these locations are under consideration by Metro.

Response to Comment AL3-71

Thank you for your comment. These suggestions will be considered during the design phase of the project.

Response to Comment AL3-72

Thank you for your comment. This suggestion will be considered during the design phase of the project.

Response to Comment AL3-73

The S. Kamada Restaurant, Atomic Café, Señor Fish, and Coast Imports building would be offered by Metro for one dollar for one year from certification of this Final EIS/EIR to any party wishing to assume responsibility for its relocation. It is situated above the proposed station box, and must be removed in order for the station to be constructed. Should no parties come forward, Metro would incorporate materials from the building into the project facilities where feasible. Metro would also offer to provide an exhibit commemorating the building at the Japanese American National Museum or other suitable location. Mitigation measures are included in the Mitigation Monitoring and Reporting Program for the Locally Preferred Alternative (Chapter 8) of this Final EIS/EIR to help reduce the impacts of removing this building.

Response to Comment AL3-74

Comment acknowledged. Pedestrian crossing distance, across the portion of 1st Street that would be widened as part of the Locally Preferred Alternative, would be minimized to the extent feasible.

Response to Comment AL3-75

Comment acknowledged. Traffic, pedestrian, and community impacts associated with the Underground Emphasis LRT Alternative were analyzed in Chapter 3, Transportation Impacts and Mitigation, and Section 4.3, Community and Neighborhood Impacts, of the Draft EIS/EIR and this Final EIS/EIR. The concerns regarding the Underground Emphasis LRT Alternative are not an issue under the Locally Preferred Alternative. The Locally Preferred Alternative would be underground at the intersection of 1st and Alameda Streets and would not include an underpass.

Response to Comment AL3-76

Please refer to Response to Comment AL3-75, above. The concerns regarding the At-Grade Emphasis LRT Alternative are not an issue under the Locally Preferred Alternative. The Locally Preferred Alternative would not cross the intersection of Temple and Alameda Streets.

Response to Comment AL3-77

Support for the Flower/5th/4th Street station is noted. The Metro Board of Directors voted on October 28, 2010 to designate the Fully Underground LRT Alternative without the Flower/5th/4th Street station as the Locally Preferred Alternative. The deletion of the station was done in an effort to reduce the cost of the project while still meeting the project's purpose and need. An enhanced pedestrian walkway connecting the 4th/Flower Streets area to the existing 7th Street/Metro Center Station would be constructed on Flower Street to improve access to the Financial District. Metro understands the importance of serving the Financial District and believes that the Locally Preferred Alternative still meets the purpose and need of the project despite the station deletion. Deletion of the Flower/5th/4th Street station would result in minimal ridership losses because most riders would use the 2nd/Hope Street station or 7th Street/Metro Center Station, which would service the Financial District. After the October 28, 2010 meeting, the Metro Board of Directors directed staff to meet with the Financial District stakeholders to discuss options for privately funding the Flower/5th/4th Street station, but no funding sources were identified. However, the design of the Locally Preferred Alternative would not preclude a station at 5th and Flower Streets from being built as a possible future, separate project.

Response to Comment AL3-78

Mitigation measures for the potential impacts to the 2nd Street Tunnel that would occur as a result of the At-Grade Emphasis LRT Alternative were included in Section 4.12.1.4 of the Draft EIS/EIR. Metro believes that these mitigation measures would be sufficient to reduce impacts to the 2nd Street Tunnel below the level of significance. The Metro Board of Directors did not identify this alternative as the Locally Preferred Alternative, and instead designated the Fully Underground LRT Alternative as the Locally Preferred Alternative on October 28, 2010.

Response to Comment AL3-79

Metro will coordinate with City departments as the design progresses. Drawings will be provided to the City for review. Metro will include an element of urban design that will address

enhancements in the public realm, station entrance location, entrance design, connection to bicycle and pedestrian circulation routes, integration into the surrounding area, way finding, catenary poles, materials, or station colors. Approval regarding urban design elements will be made by the agency that would control and maintain the element. For instance, crosswalks, sidewalks, and traffic lanes would be maintained by the City after construction and, therefore, would require City approval. Station entrances, plaza, mezzanine, platform, and ancillary facility design would be maintained by Metro and do not require City approval. Section 4.4.4.2.2, Final Operation-Related Mitigation Measures for the Locally Preferred Alternative, and the Mitigation Monitoring and Reporting Program for the Locally Preferred Alternative, Chapter 8, of this Final EIS/EIR include the following:

> Urban design measures shall be developed to integrate the light rail transit (LRT) facilities (stations, portals, entrances, etc.) into each community as appropriate. Designs might address elements such as materials and colors. This process has already begun with community urban design workshops, and Metro shall continue to involve communities in this process. Metro shall coordinate with the City of Los Angeles Department of Planning staff during the design process and regarding urban design elements.

The Draft EIS/EIR and this Final EIS/EIR determined that no significant visual impacts to the Historic Core, Civic Center, or Little Tokyo communities would result from operation of any of the build alternatives. The original mitigation measures in Section 4.4.4.2 of the Draft EIS/EIR were identified to further reduce less than significant impacts. The modified mitigation measures above would still further reduce less than significant visual impacts.

Response to Comment AL3-80

Bicycle and pedestrian facilities would be unaffected by operation of the Locally Preferred Alternative or implementation of its mitigation measures, consistent with the analysis in Section 3.3.5.2.4 of the Draft EIS/EIR and this Final EIS/EIR.

Response to Comment AL3-81

The Regional Connector project has been in the public domain since 2007, starting with the Alternatives Analysis process. Information about the potential alignments for the Regional Connector has been readily available since this time through public meetings, direct mailings, the Metro website, flyers, newspaper advertisements, and other media as described in Chapter 7, Public and Agency Outreach, of the Draft EIS/EIR and this Final EIS/EIR. Sections 4.2, 4.3, 4.14, and 4.17 of the Draft EIS/EIR and this Final EIS/EIR analyzed the primary impacts to businesses. The mitigation measures shown in the Mitigation Monitoring and Reporting Program for the Locally Preferred Alternative (Chapter 8) of this Final EIS/EIR will serve to minimize and manage potential impacts. Metro is committed to implementation of these mitigation measures. Metro welcomes the involvement of CRA/LA in implementing the mitigation measures. Metro has made refinements to the Locally Preferred Alternative in response to community input. The refinements would greatly reduce impacts to businesses. As indicated in Section 4.2.1 of the Draft EIS/EIR and this Final EIS/EIR, compensation and relocation assistance will be provided to displaced businesses consistent with the Uniform Relocation Assistance and Real Property Acquisition Policies Act of 1970. Metro will work closely with the City of Los Angeles to manage impacts to businesses.

Response to Comment AL3-82

This comment is correct. Please refer to Chapter 3, Transportation Impacts and Mitigation, of the Draft EIS/EIR and this Final EIS/EIR for a detailed analysis of traffic circulation impacts associated with construction of the At-Grade Emphasis LRT Alternative.

Response to Comment AL3-83

Comment noted. These impacts pertain to the At-Grade Emphasis LRT Alternative. The Metro Board of Directors voted on October 28, 2010 to designate the Fully Underground LRT Alternative as the Locally Preferred Alternative.

Response to Comment AL3-84

Comment acknowledged. As indicated in Chapter 3, Transportation Impacts and Mitigation, of the Draft EIS/EIR, and the Mitigation Monitoring and Reporting Program for the Locally Preferred Alternative (Chapter 8) of this Final EIS/EIR, during the final design phase of the project, site- and street-specific Worksite Traffic Control Plans will be developed in cooperation with LADOT to accommodate the required traffic, pedestrian, and bicycle movements.

Metro will coordinate with LADOT and CRA/LA during final design phase and construction of the project.

Response to Comment AL3-85

Nighttime lighting, air quality, and noise impacts associated with construction were analyzed in Section 4.4, Visual and Aesthetic Impacts, Section 4.5, Air Quality, and Section 4.7, Noise and Vibration, of the Draft EIS/EIR and this Final EIS/EIR, respectively. Additional noise and vibration analysis was provided in Section 4.7 of the Supplemental EA/Recirculated Draft EIR Sections and this Final EIS/EIR. Nighttime lighting impacts during construction of the Locally Preferred Alternative would not be significant under CEQA or adverse under NEPA. Mitigation measures to reduce air quality and noise (ground-borne noise) impacts associated with construction of the Locally Preferred Alternative have been refined and confirmed in this Final EIS/EIR and the Mitigation Monitoring and Reporting Program for the Locally Preferred Alternative (Chapter 8).

Special attention has been given to specification of all mitigation measures. During preparation of this Final EIS/EIR, Metro held meetings with community groups and identified municipal leaders to guide them in the decision-making process as it relates to the proposed station locations, alignment options, and anticipated mitigation measures. Community input gathered during these meetings has been taken into account in the refinement of the Locally Preferred Alternative and the Mitigation Monitoring and Reporting Program for the Locally Preferred Alternative.

Response to Comment AL3-86

In the Draft EIS/EIR, cut and cover construction was identified as being limited to the portal areas to the north and east of the 1st and Alameda Streets intersection, the station areas, and Flower Street between Wilshire Boulevard and 3rd Street. Refinements to the Locally Preferred Alternative have reduced the cut and cover areas by extending tunnel boring machine operations to 4th and Flower Streets. Off-street construction staging areas were identified in

Appendix II, Conceptual Drawings for Build Alternatives Analyzed in the Draft EIS/EIR and Appendix 1, Locally Preferred Alternative Drawings, of this Final EIS/EIR, and would be used in a way that minimizes traffic disruption. Decking would be used at in-street cut and cover locations.

Response to Comment AL3-87

Comment acknowledged. A geotechnical investigation was performed for all the alternatives and included in the Draft EIS/EIR. A geotechnical investigation will be performed during final design for the proposed at-grade and below-grade structures and improvements associated with the Locally Preferred Alternative. The investigation will provide additional site-specific data to facilitate final design for maintaining the integrity of existing structures under static and seismic loading and operational demands. In addition, mitigation was identified in Section 4.9, Geotechnical/Subsurface/Seismic/Hazardous Materials, of the Draft EIS/EIR to reduce impacts associated with subsidence to less than significant levels. Limiting movement to less than acceptable threshold values for vertical, horizontal, and angular deformation as a performance standard, require ground improvement such as grouting or other methods to fill voids where appropriate and offset potential settlement, grout tunnel alignment in advance to provide adequate soil support and minimize settlement, and monitor settlement along the project alignment. Since publication of the Draft EIS/EIR and Supplemental EA/Recirculated Draft EIR Sections, mitigation measures to limit ground movement have been refined and confirmed for the Locally Preferred Alternative, as indicated in Section 4.9.4.2, of this Final EIS/EIR. With implementation of mitigation, impacts associated with ground movement would be reduced to less than significant.

Response to Comment AL3-88

Metro looks forward to working closely with CRA/LA staff regarding plans, programs, and initiatives to minimize construction effects.

Response to Comment AL3-89

The comment is noted and will be addressed during the design phase of the project.

Response to Comment AL3-90

Ongoing coordination with LADOT and City of Los Angeles Department of Public Works, LABOE will take place throughout the design process. Preliminary haul routes were identified in the Draft EIS/EIR for all the alternatives and in this Final EIS/EIR for the Locally Preferred Alternative. Once construction lay down areas are identified, haul routes will be finalized and submitted to LADOT, LABOE, and Transportation Construction Management Committee (TCMC) staff, for review and comment. Metro looks forward to working closely with TCMC staff regarding haul routes.

Response to Comment AL3-91

The comment is noted and continuous coordination with LADOT and LABOE will take place throughout the design process. Haul routes will be confirmed and submitted to LADOT and LABOE staff for review and comment.

Response to Comment AL3-92

Potential impacts to utilities during project construction were identified in Section 4.18.2.2, Appendix K - Description of Construction, and Appendix FF - Construction Impacts Technical Memorandum, of the Draft EIS/EIR. They were also included in Section 4.18.2.2 of the Supplemental EA/Recirculated Draft EIR Sections. It is anticipated that utility conflicts and therefore relocation would be necessary as described in the Draft EIS/EIR. As part of the design process, Metro will work closely with City departments and provide the City opportunities to review and provide input on identification of utility conflicts, design solutions to avoid conflicts, proposed relocations, and restoration of service. Metro will minimize utility disruptions. Mitigation measures are shown in the Mitigation Monitoring and Reporting Program for the Locally Preferred Alternative (Chapter 8) of this Final EIS/EIR.

Response to Comment AL3-93

The list of the LABOE's current and future projects referenced in the comment was not attached to the comment letter. However, the extensive project list of public works projects maintained by the City of Los Angeles was reviewed for related projects that could contribute to cumulative impacts. Most of the planned projects within the City are related to ongoing maintenance or replacement in-kind of existing infrastructure.

Response to Comment AL3-94

Comment acknowledged. As the drawings progress, these elements will be addressed in the drawings and or placed within the Special Provisions (a section in the construction contract documents) as the design is refined.

Response to Comment AL3-95

During construction, temporary street lighting would be required in areas where existing street lighting fixtures need to be removed to accommodate construction activities. Metro will work with the City to meet the City's standards for lighting levels at particular locations where permanent street lights are removed. Physical constraints may not allow for temporary units to be installed to match the existing location; however, the number of units and locations would be installed to provide required lighting per the City's standards.

Response to Comment AL3-96

No park and ride facilities are proposed under the Locally Preferred Alternative. Therefore, no further response is required.

Response to Comment AL3-97

Metro intends to minimize impacts to businesses in Little Tokyo during construction. Sections 4.14.3.4 and 4.14.3.5 of the Draft EIS/EIR and this Final EIS/EIR projected that the Regional Connector would ultimately have long-term beneficial impacts to businesses throughout the project, including in Little Tokyo.

Response to Comment AL3-98

The potential impacts to Little Tokyo were described in Section 4.17.3.5 of the Draft EIS/EIR and this Final EIS/EIR. Metro will implement the mitigation measures in the Mitigation Monitoring and Reporting Program for the Locally Preferred Alternative (Chapter 8) of this Final EIS/EIR in

order to minimize the construction impacts of the project. Metro believes that these measures are comprehensive and will preserve the health and vitality of the Little Tokyo business community. As described in Chapter 2, Alternatives Considered, of this Final EIS/EIR, the Locally Preferred Alternative has been refined since publication of the Draft EIS/EIR. The refined alignment would not involve cut and cover construction on 2nd Street in Little Tokyo, thus eliminating the need for lengthy closures of the street and sidewalk. Temporary intermittent closures may still be needed, but these would be less frequent than with the non-refined alternative described in the Draft EIS/EIR.

Response to Comment AL3-99

Metro has held urban design workshops for the 2nd/Hope Street station and will continue to involve the community in the design process. Metro has been meeting with the Broad Foundation staff to coordinate the design of the station and alignment.

Response to Comment AL3-100

The commenter suggests that text referencing local land use documents in Chapter 1, Purpose and Need, of the Draft EIS/EIR be modified. The following text of this Final EIS/EIR has been modified to include the following:

Section 1.1: Local land use plans and policies, including the adopted City of Los Angeles General Plan Framework Element, Central City Community Plan, and Downtown Design Guidelines and Modified Street Standards, support increased transit alternatives, linking the regional system through downtown, and transit and pedestrian-friendly design in downtown communities.

Section 1.6, 6th bullet: Local land use plans and policies, including the adopted City of Los Angeles General Plan Framework Element, Central City Community Plan, and Downtown Design Guidelines and Modified Street Standards, support increased transit alternatives, linking the regional system through downtown, and transit and pedestrian-friendly design in downtown communities.

Section 1.6.4: Local and regional land use plans and policies, including the adopted City of Los Angeles General Plan Framework Element, Central City Community Plan, and Downtown Design Guidelines and Modified Street Standards, support increased transit alternatives, linking the regional system through downtown, and transit and pedestrian-friendly design in downtown communities. These are discussed earlier in this section and detailed in Appendix E (Purpose and Need Report) of the Draft EIS/EIR.

Response to Comment AL3-101

Please refer to Response to Comment CN14-3, below, for issues relating to the assessment of impacts and mitigation for the S. Kamada Restaurant, Atomic Café, Señor Fish, and Coast Imports building. Appropriate mitigation for impacts to historic resources has been addressed in the Mitigation Monitoring and Reporting Program for the Locally Preferred Alternative (Chapter 8) of this Final EIS/EIR which was developed in consultation with the California State Historic Preservation Officer and other consulting parties. Additional mitigation measures are included in Section 4.12, Historic Resources, of this Final EIS/EIR and included in the Mitigation Monitoring and Reporting Program for the Locally Preferred Alternative that would reduce the

impacts to the S. Kamada Restaurant, Atomic Café, Señor Fish, and Coast Imports building to a less than significant level.

Response to Comment AL3-102

Comment acknowledged. On October 28, 2010, the Metro Board of Directors voted to designate the Fully Underground LRT Alternative as the Locally Preferred Alternative. The Fully Underground LRT Alternative would not involve a "punch" through the wall of the existing 2nd Street Tunnel as with the At-Grade Emphasis LRT Alternative. Given that the At-Grade Emphasis LRT Alternative is not the designated Locally Preferred Alternative, mitigation measures suggested in the comment letter would not be necessary.

Response to Comment AL3-103

Urban design enhancements that could be used within 1,000 feet of stations and portals include widening of sidewalks, bicycle racks, ornamental landscaping, and decorative lighting and paving. Urban design enhancements incorporated into the stations and portals would be consistent with the goals of all applicable plans, policies, and regulations, and compatible with the surrounding community.

Response to Comment AL3-104

This clarification has been made in the tables in Section 4.12.1.

Response to Comment AL3-105

Comment noted and will be addressed as the design progresses. The City of Los Angeles will be provided opportunities to review and provide input. Metro will work closely with the City throughout this process.

Response to Comment AL3-106

Comment noted and will be addressed as the design progresses. The City of Los Angeles will be provided opportunities to review and provide input. Metro will work closely with the City throughout this process.

Response to Comment AL3-107

Comment noted. Metro reviewed the substructure maps indicated for reference.

Response to Comment AL3-108

Comment noted and will be addressed as project design progresses. The City of Los Angeles will be provided opportunities to review and provide input. Metro will work closely with the City throughout this process.

Response to Comment AL3-109

Comment noted. Metro will confirm all impacted storm drains on composite utility and utility relocation plans within the proposed project limits during the final design phase with City review.

Response to Comment AL3-110

Comment noted. Metro will confirm all impacted storm drains on composite utility and utility relocation plans within the proposed project limits during the final design phase with City review.

Response to Comment AL3-111

Comment noted. Metro reviewed the alignment and identified potential conflicts and will mitigate as appropriate.

Response to Comment AL3-112

Comment noted. Metro will confirm all impacted storm drains on composite utility and utility relocation plans within the proposed project limits during the final design phase with City review.

Response to Comment AL3-113

Comment noted. Metro will confirm all impacted storm drains on composite utility and utility relocation plans within the proposed project limits during the final design phase with City review.

Response to Comment AL3-114

Comment noted. Metro will confirm all impacted sewers on composite utility and utility relocation plans within the proposed project limits during the final design phase with City review.

Response to Comment AL3-115

Comment noted. Street name has been corrected. Please refer to Final EIS/EIR Appendix 1, Updated Locally Preferred Alternative Drawings.

Response to Comment AL3-116

Comment noted. Metro will confirm all impacted storm drains on composite utility and utility relocation plans within the proposed project limits during the final design phase with City review.

Response to Comment AL3-117

Comment noted. Metro will confirm all impacted sewers on composite utility and utility relocation plans within the proposed project limits during the final design phase with City review.

Response to Comment AL3-118

Comment noted. Name of the hotel has been corrected. Please refer to Final EIS/EIR Appendix 1, Updated Locally Preferred Alternative Drawings.

Subject: RE: Fwd: Metro Regional Connector: REMINDER TO PROVIDE COMMENTS BY OCTOBER 18 CLOSE OF DRAFT EIS/EIR COMMENT PERIOD
Date: Monday, October 18, 2010 4:55 PM
From: Duong, Toan <TDUONG@dpw.lacounty.gov>
To: Regional Connector RSC_RegionalConnector@metro.net
Cc: Yanez, Jarrett JYANEZ@dpw.lacounty.gov, Angeles, Carmen CANGELES@dpw.lacounty.gov, Ibrahim, Amir AIBRAHIM@dpw.lacounty.gov, Burger, Steve SBURGER@dpw.lacounty.gov, Doudar, Phil PDOUDAR@dpw.lacounty.gov
Conversation: Fwd: Metro Regional Connector: REMINDER TO PROVIDE COMMENTS BY OCTOBER 18 CLOSE OF DRAFT EIS/EIR COMMENT PERIOD

Ms. Saltarelli

The following are comments from Los Angeles County Department of Public Works for this project. A signed response will be followed through regular mail.

Services–Traffic/Access

1. The front page of the Executive Summary shows Figure ES-1, Existing and Proposed regional Metro Rail Lines (2035). Figure ES-1 shows a Metro Rail Line Under Study, called the "Crenshaw-Prairie", and another Metro Rail Line under study called the "Westside Extension to Westwood". These two proposals are not mentioned in any detail in this report, "The Regional Connector Transit Corridor". These two proposed rail routes could have an impact on roads in the Los Angeles County Road Maintenance District 3 area, such as Prairie Avenue, Hawthorne Boulevard, Crenshaw Boulevard, and Wilshire Boulevard. 1

2. Chapter 2 of The Regional Connector Transit Corridor report briefly mentions the Metro Crenshaw Line on Page 2-11; it states that the Metro Crenshaw line from the Metro Green Line at Aviation Boulevard to the Metro Expo Line at Crenshaw Boulevard is an approximately 10 mile light rail or bus rapid transit system anticipated to be operational by 2019. Is this line part of another study or proposal? 2

3. We commented on the Crenshaw Transit Corridor Project DEIR on October 26, 2009, see attached. Also the Crenshaw Transit Corridor Project DEIR page ES-9, Figure S-5 "Metro 2008 Draft Long Range Transportation Plan Summary", mentioned the "Crenshaw Boulevard Corridor" under Metro Rail to be open in 2025, which contradicts the date of 2019. This same figure also shows a Wilshire Boulevard Bus Rapid Transitway Construction to be open by 2026. 3

If you have any questions regarding traffic/access comments, please contact Mr. Armond Ghazarian at (310) 348-6448 extension 227 or by e-mail at aghazar@dpw.lacounty.gov.

Hazards–Geotechnical/Geology/Soils

The DEIR acknowledges that all or a portion of the site is located within a potentially liquefiable area per the State of California Seismic Hazard Zones Map – Los Angeles and Hollywood Quadrangles. However, the mitigation measures for the proposed stations/facilities located within the potentially liquefiable areas that are not supported by bedrock appear to be inadequate. Geotechnical reports addressing any future developments at this site shall recommend mitigation measures for geotechnical hazards such as liquefaction and seismic induced settlement. 4

If you have any questions regarding geotechnical comment, please contact Mr. Jeremy Wan at (626) 458-4925 or by e-mail at jwan@dpw.lacounty.gov.

Other–Environmental Safety

There is no landfill within 1,000 feet of the proposed project; however the DEIR indicates that the project will traverse methane zone and methane buffer zones associated with oil deposit. We therefore recommend City of Los Angeles Building & Safety provides mitigation measures, control and protection systems for any excavation and affected enclosed buildings and structures from possible hazardous gas intrusion. 5

If you have any questions regarding environmental comments, please contact Mr. Corey Mayne at (626) 458-3530 or by e-mail at cmayne@dpw.lacounty.gov.

Other-Programs

The proposed High Speed Rail project is in the vicinity of this project. The routing for the Regional Connector appears to be away from the proposed route for the High Speed Rail project. MTA should be consulting with the California High Speed Rail Authority (CHSRA) to verify that no potential conflicts will occur. Please note that the CHSRA was not listed as one of the public agencies consulted. 6

Hazards-Flood

1. Water Resources Technical Memorandum Pages 24 & 25 states "Storm drains within the city are constructed and maintained by both the City and the Los Angeles County Flood Control District. The Los Angeles County Flood Control District constructs the major storm drains and open flood control channels, and the City constructs local interconnecting tributary drains. The City's 7

system is designed to convey storm flows from a ten-year storm event, while the County system is designed for a 50 year storm event."

- Verify design storm frequency of Los Angeles County Flood Control District (LACFCD) facilities potentially affected by the proposed project. The attached memorandum regarding LACFCD standards for level of flood protection is provided for your reference.

7 cont'd

2. Water Resources Technical Memorandum Pages 36 & 41states "Overall however, construction of the At-Grade Emphasis LRT Alternative would be expected to result in minimal impacts and need for relocation of the current drainage system. In the case where construction activities would result in the need to relocate certain drainage infrastructure, temporary lines would be installed during the construction period. Construction of the At-Grade Emphasis LRT Alternative would have no significant impact on the overall drainage pattern in the project area."

   "As described in the analysis of storm drain impacts under the At-Grade Emphasis LRT Alternative, there could be conflicts with the existing storm drain infrastructure along the proposed alignment. Similar impacts would be expected under the Underground Emphasis LRT Alternative. The main conflicts could occur along the pipe backbone along Flower and Streets. However, design measures would be implemented in order to address potential conflicts and there would be no significant impact to the capacity of the existing system or overall direction of storm flows through the drainage infrastructure in the project area."

   - Contact Los Angeles County Department of Public Works, Construction Division for permitting requirements pertaining to any proposed connection(s) or alterations to LACFCD facilities.

   - Contact Los Angeles County Department of Public Works, Design Division for allowable discharge to LACFCD facilities for any proposed connections to LACFCD facilities. Proposed discharges in excess of allowable discharge may require mitigation.

   - Contact Los Angeles County Department of Public Works, Program Development Division for agreements requirements with MTA pertaining to any proposed connection(s) or alterations to LACFCD facilities.

8

If you have any questions regarding flood comments, please contact Ms. LizbethCordova at (626) 458-4921 or by e-mail at lcordova@dpw.lacounty.gov.

If you have any other questions or require additional information, please contact me at (626) 458-4921 or by e-mail at tduong@dpw.lacounty.gov.

Subject: Metro Regional Connector: REMINDER TO PROVIDE COMMENTS BY OCTOBER 18 CLOSE OF DRAFT EIS/EIR COMMENT PERIOD

Regional Connector Transit Corridor Study

Conclusion of Public Hearings

On September 3, 2010, Metro released the Draft Environmental Impact Study and Environmental Impact Report (Draft EIS/EIR) for the Regional Connector Transit Corridor Study which analyzed the proposed project and alternatives. Metro is soliciting public comments regarding the Locally Preferred Alternative (LPA) and additional topics discussed in the Draft EIS/EIR. As a reminder, the Regional Connector is looking for the best approach to connect the Blue, Expo and Gold Light Rail Transit (LRT) lines, allowing for increased transit access throughout Los Angeles County.

Metro recently hosted two public hearings to discuss the Draft EIS/EIR. Nearly 200 people attended the hearings, with many submitting written and/or verbal comments. These comments have become a part of the official record and will be responded to in the Final EIS/EIR.

The public hearing at the Japanese American National Museum on September 28, 2010 was recorded and is available for viewing by following this link.

Formal comments on the Draft EIS/R may still be submitted through October 18, 2010, in a number of ways:

•e-mail to: regionalconnector@metro.net

•US Mail to: Dolores Roybal Saltarelli, Project Manager, Metro, 1 Gateway Plaza, MS 99-22-2, Los Angeles, CA 90012

•visiting the project website

Public comments on the Draft EIS/EIR will be accepted until October 18, 2010. Metro will respond to all comments received during the Final EIS/EIR phase of the project.

If you would like to review information about the Regional Connector, including presentations shared with the public over the last three years, please follow the link.

LEVEL OF FLOOD PROTECTION
FILE NO. 2-15.321

The following Level of Flood and Drainage Protection Standards has been adopted by the Department of Public Works:

I. Capital Flood Protection (Based on a rainfall with a probability of occurrence of once in 50 years).

A. Natural watercourses -

All facilities that are constructed in or intercept flood waters from natural watercourses shall be designed for the Capital Flood. These include open channels, closed conduits, bridges, and dams or debris basins (not under State of California jurisdiction). See Attachment A for definition of a watercourse.

B. Floodways - All areas mapped as floodways shall be mapped based on the Capital Flood.

C. Natural Depressions or Sumps -

All facilities that are constructed to drain natural depressions or sumps shall be designed for a Capital Flood. These include channels, closed conduits, retention basins, detention basins, pump stations and highway underpasses. See Attachment A for definition of sumps.

D. Culverts under major and secondary highways.

II. Urban Design Storm (Based on a rainfall with a probability of occurrence of once in 25 years).

The Urban Design Storm shall be the level of protection for all developed areas with other than conditions described in I above.

The surface capacity of the street or highway may be used up to a water surface level not exceeding the road right of way line. The available surface capacity of the street, however, may be restricted by vehicular or pedestrian traffic requirements see (Attachment A). If a storm drain is required to reduce the water surface level in the street to an acceptable level, it shall be designed for not less than 10-year frequency rainfall flow rates. The storm drain capacity shall be increased where necessary to lower the water surface level for the 25-year frequency storm to within road right of way or to meet other requirements as indicated in Attachment A.

III. Probable Maximum Flood -

All dams (earth embankment, concrete or other materials) that fall under the control of the State of California laws defining dams shall be constructed to safely pass the probable maximum flood as determined from the probable maximum precipitation as defined by the National Weather Service.

See Attachment B for background and other pertinent data.

GJP:yo

Attach (2)

Attachment A
Level of Flood Protection

Definitions:

1. Natural Watercourses -

A natural watercourse is a path along which water flows as a result of natural topographic features. Furthermore, for the purposes of this definition, a natural watercourse drains a watershed greater than 100 acres and also meets one or more of the following conditions:

a. Experiences flow velocities greater than five feet per second while carrying a Capital Flood.

b. Has flow depths greater than 1.5 feet while carrying a Capital Flood.

c. Would have water surface elevations, while carrying a Capital Flood, within one foot of the bases of adjacent habitable structures, if such water surface elevations would result from construction of facilities with less than a Capital Flood capacity.

2. Depression or sump -

A depression or sump is an area for which there is no surface route to outlet flows. Furthermore, for the purposes of this definition, a depression or sump also meets one or more of the following conditions:

a. Would have a ponded water surface elevation, during a Capital Flood, within one foot of the bases of adjacent habitable structures, if such elevation would result from construction of facilities with less than a Capital Flood capacity. This condition does not apply if there is a surface route for outflow such that the ponded water surface cannot reach the bases of adjacent structures during a Capital Flood.

b. In a roadway, would have a ponded water surface elevation higher than the elevation of the public right of way line if facilities with less than a Capital Flood capacity were constructed. This condition applies to flows which reach the roadway upstream of the sump and are conveyed to the sump by the roadway.

c. Has a ponded depth of three feet or greater.

3. Street Capacity -

Maximum street capacity as defined herein is the capacity of the street section to carry flows within street right of way (depth of flow does not exceed either property line). See Highway Design Manual for criteria on quantity of water to be removed from the road surface to provide favorable conditions for vehiclular and pedestrian traffic for particular level of protection. This may increase the level of protection required to be provided by the drain.

Attachment B
Level of Flood Protection

Background

The Hydrology SubCommittee has reviewed the level of protection standards of the three former Departments (County Engineer, Road, and Flood) as well as all major agencies in Southern California. In addition, we have met with the County Counsel for legal advice.

The Flood Control District (FCD) in cooperation with the United States Army Corps of Engineers (C of E) has constructed the major flood control facilities in Los Angeles County. These facilities which have channelized the rivers and major streams have been designed for Capital Flood protection and, in the case of the C of E, their Standard Project Flood (SPF). Analysis has indicated that these are comparable levels of protection. In most cases, the SPF equals or exceeds the Capital Flood.

The Los Angeles County Road Department has also used the criterion of the FCD Capital Flood when providing facilities to cross over (bridge) major streams.

The County Engineer required Capital Flood protection in all instances where the FCD had indicated a comprehensive plan channel or had hydrology for a major stream. They required the developers to use FCD flow rates.

The level of protection for urban areas differed between the three Departments. The County Engineer required all new tract developments to use the 25-year frequency level. This could be obtained with a combination of storm drain and surface street capacity. However, if off site capability to accept the excess surface flows was limited, they required the drain exiting the development to carry the 25-year frequency flows. In the majority of the cases, therefore, the developers chose to construct the entire storm drain system for the 25-year frequency flow rates. The Road Department followed the County Engineer requirements for new tract developments. Road Department Cash Contract projects utilized a 10-year frequency protection level obtained by a combination of a storm drain and street surface capacity. The quantity of surface flow varied dependent upon whether the project fell under local or federal requirements. Sumps were designed to the Capital Flood protection level.

The FCD required the 10-year frequency level for storm drains in streets for the four Storm Drain Bond Issue Programs 1952-1970 and/or District projects constructed since the 1970's. Prior to these Storm Drain Bond Issues, the FCD was not involved to any great extent in other than major drainage channels. However, all projects including tributary storm drains in this period were constructed to the 50-year frequency level.

This background suggests that certain standards have been determined to be reasonable levels of protection. Our opinion, based on discussions with County Counsel, is that any lower levels of protection in future projects or approvals would increase the chances of liability should damage occur.

Compatibility to Federal Flood Insurance Requirements

The Federal Insurance Agency (FIA) has set the 100-year flood as their standard. The hydrology is based on historical runoff records to produce the 100-year flow rate. There is no allowance made for future urbanization. In developed areas the standard requires the finished floor elevation of proposed habitable structures to equal or exceed the water surface of the 100-year flood.

Our investigation indicates the recommended levels of protection, Capital Flood and Urban Design Storm, will meet or exceed FIA requirements.

A frequency analysis of the entire County shows that the FIA standard is between the 25-year and 10-year rainfall frequency levels. In most areas, facilities designed for the 10-year rainfall frequency level, when combined with the available street capacity, provide sufficient protection to meet FIA requirements. However, if development of an area changes and FIA restudies the area, 10-year rainfall frequency facilities may prove inadequate.

The proposed 25-year rainfall frequency level will meet FIA standards even if development changes.

The recommended protection levels are based on meeting FIA standards.

Compatibility with Existing Systems

The level of protection standards recommended may have to be modified in cases where the capacity of the conduit into which the proposed drain outlets has limited capacity. Where no relief drain is planned, it is recommended that the drain be restricted to the capacity available at its outlet. In cases where a relief drain is anticipated, the proposed drain is recommended to be sized for the appropriate level of protection.

There are enumerable possible situations, and all cannot be covered in this policy statement. The appropriate Section Head in the Department should review the proposed drainage system and the outlet conditions based on this policy and determine the required level of protection. In situations where the determination may not be clear-cut, the Section Head should recommend to his Division Head that it be referred to the Q Committee for its recommendations to the Director of Public Works.

Economics

We believe the proposed level of protection will not result in a change in cost for either design or construction for Department-constructed drains or developer-constructed drains in a majority of the situations.

The Urban Design Storm (25-year) will not increase requirements for drains required in new developments. The Department-constructed drains may increase in size in areas where the terrain is very flat and street capacity is limited. We have analyzed a number of different situations on prior projects and concluded that design costs would not increase more than one percent and construction costs would increase between two percent and five percent. However, we believe the number of projects affected will be fewer than 20 percent.

There may be some situations where under previous County Engineer policy construction in or intercepting watercourses used a 25-year level, whereas now a 50-year level will be required. It is difficult to determine exactly what percentage of the projects will be affected. In any event, the cost increase for these projects would be approximately 8 percent.

Rainfall vs. Runoff Records

The Committee recommends the continued use of rainfall records to determine the design storm. The major reason for this is that rainfall records are not affected by urbanization, whereas runoff records tend to be poor predictors of future runoff in areas where development is changing. Although we now have considerable length of runoff records, there has been constant urbanization throughout the record period. In addition, there is continued urbanization in the Santa Clara Valley, Antelope Valley, and certain areas on the south slope of the San Gabriel Mountains and in the West County area.

Discussion of Comments

Comment: Use a straight 10-year rainfall level of protection for all storm drains in streets.

Reply: The proposed level of protection should in the majority of the cases result in storm drains designed for 10-year Q's. The proposed level of protection is a combined system of utilizing street capacity and drain. It will in all cases meet Federal Flood Insurance standards. It will not lower present levels of protection required by the County Engineer, whereas a straight 10-year would in some cases.

Comment: The proposed level of protection will increase cost.

Reply: An analysis of drains in a number of different areas indicate that in the majority of the cases, the street sections have adequate capacity for the difference between a 25-year and 10-year Q. In the areas with flat street slopes or other areas where street capacity may be limited for one reason or another, the increased costs for the drain and appurtenances range between two percent and five percent. Design costs will be increased approximately one percent.

Comment: We feel you must prepare a precise policy regarding the handling of the situation where the new hydrology method produces flows that are greater than the outletting system's capacity. We feel the new method will produce greater Q's in almost all cases based on the results of hydrology reviews made during the Bond Issue Programs. As you are aware, the Bond Issue Programs guideline was to accept flow rates based on the County Engineer's hydrologic method when the resultant Q's were as much as 15 percent lower than the Q's generated by the District's short-cut rational method. It is recommended that you adapt this 15 percent figure as a guideline for future hydrologic studies.

Reply: A policy regarding the compatibility of a proposed drain to an existing outletting system is given in this statement and if interpetation is required, it will be given by the appropriate Department Section Head. Difficult situations will be referred to the Q Committee for its recommendation to the Director. The 15 percent guideline would no longer be appropriate. It was used up through the 1964 Bond Issue Projects. At that time, there was a difference in some coefficients used, and on very large areas the Q's near the end of the drain using the County Engineer method were sometimes lower than the District method. However, the Q's at the upper end of the drain were usually larger than the District's using the County Engineer method.

Comment: Will a 10-year rainfall frequency drain result in acceptable flooding levels during the FIA 100-year flood? Will the flooding levels be below finished floor elevations? Can we use a standard that will adjust the drain size to account for this if necessary?

Reply: Our investigation indicates that in most cases 10-year drains will give protection such that flooding levels will not exceed FIA standards. A frequency analysis when considering the entire County indicates that the FIA flooding levels are between the 10-year and 25-year rainfall frequency flooding levels. A standard could be developed to adjust drain sizes to meet FIA standards, however, it would be more complex. It also would not produce uniform results throughout the County.

Summary

The Hydrology SubCommittee has evaluated all the comments received on the proposed level of protection policy. After careful consideration of all points of view, we believe we have recommended a policy that is in the best interests of the public and the Department. We believe this policy will provide adequate flooding protection for Los Angeles County with insignificant, if any, increase in costs and minimize future Department liability.

Mr. Roderick Diaz
Project Manager
Los Angeles County Metropolitan
Transportation Authority
One Gateway Plaza, M/S 99-22-3
Los Angeles, CA 90012-2952

Dear Mr. Diaz:

DRAFT ENVIRONMENTAL IMPACT REPORT (DEIR)
CRENSHAW TRANSIT CORRIDOR PROJECT
LOS ANGELES COUNTY
METROPOLITAN TRANSPORTATION AUTHORITY

We reviewed the DEIR for the Crenshaw Transit Corridor project. The project would improve transit services in the corridor and connect corridor residents and employees with existing transit lines such as the Metro Green Line or approved transit lines such as the Exposition Light Rail Transit Line thereby improving mobility and access to regional activity centers.

The following comments are for your consideration and relate to the environmental document only.

Hazards-Flood/Water Quality

1. The DEIR should note how the project will comply with National Pollutant Discharge Elimination System permit.

2. Once a project alternative is selected, submit a hydrology study for review and approval to the County of Los Angeles Department of Public Works. The hydrology study should also address applicable Standard Urban Stormwater Mitigation Plan and Total Maximum Daily Load requirements.

3. The area of the proposed project contains Los Angeles County Flood Control District facilities. If encroachments, connections, or alterations to Los Angeles County Flood Control District facilities are proposed, contact Public Works' Construction Division for permitting requirements.

If you have any questions regarding flood comments, please contact Ms. Lizbeth Cordova at (626) 458-4921 or by e-mail at lcordova@dpw.lacounty.gov.

Hazards-Geotechnical/Soils/Geology

The site is located within a potentially liquefiable area per the State of California Seismic Hazard Zones Map–Hollywood and Inglewood Quadrangles. Also, all or portion of the site is located within the Alquist Priolo Earthquake Fault Zone. Site-specific geotechnical and geologic reports addressing the proposed development and recommending mitigation measures for geotechnical and geologic hazards should be included as part of the DEIR.

If you have any questions regarding geotechnical comments, please contact Mr. Jeremy Wan at (626) 458-4925 by e-mail at jwan@dpw.lacounty.gov.

Services-Road/Flood Maintenance

1. Page ES-12, Executive Summary: Alignment option C-2 would impact County road maintenance services. This alignment travels north on Hawthorne Boulevard from the Green Line Station to Florence Avenue. This section of Hawthorne Avenue is maintained by the County and has a landscaped median in the center of the alignment from 111th Street to 104th Street. This median would have to be removed if Route C-2 was approved for the alignment. In addition, this segment of Hawthorne Boulevard was resurfaced less than three months ago by the County.

   All other alignments are either in the City of Los Angeles or the City of Inglewood. Page ES-14 summarizes the proposed alignments, and Alignment C-1 is listed as the most favored route; Alignment C-2 is the second more favored route. We would agree with the rankings and prefer Alignment C-1 since it has the least impact to the County.

2. Pages ES-16 and ES-17 discuss the alternatives considered for a Maintenance and Operations Facilities Site. The report ranks Site D the highest. We concur with this assessment since Site D is a vacant lot of 14.8 acres on Rosecrans Avenue in the City of El Segundo, has access to the rail, and is privately owned. A facility at this site would minimize the impact of the project on the county in terms of facility, relocations, and on-going maintenance operations.

   The report ranks Site B as the next highest. The selection of Site B could have a major operational impact to Public Works since Site B would require Public Works' Road Maintenance District 3 (Westchester, RD233, Fleet, Construction Division, Permits; Operational Services' warehouse) and Flood Maintenance Division (83rd Street yard) to be relocated. If Site B is selected, a suitable site of equivalent size and functionality should be identified for relocation

of these critical facilities to minimize the potential impacts. Additionally, plans should be made to allow construction of the replacement facility and relocation such that on-going operations are not significantly impacted.

Of the four sites in the Executive Summary, Site C should be argued as the next best site after Site D. It is larger than Site B and does not require any "buffers" to make the site useable. Table ES-2 lists the pros and cons of each site and Site C looks more favorable than B from the data in the table.

3. The DEIR should explore other potential sites not listed in the Executive Summary that could be better potential sites than Site B including expansion of existing MTA-owned facilities. If Site B is chosen as the Maintenance and Operations Facility Site for the Crenshaw Transit Corridor project, the DEIR should discuss the relocation, financial, logistic, and operational impacts to Public Works.

   If you have any questions regarding comments, please contact Mr. Joe Young at (310) 348-6448 by e-mail at jyoung@dpw.lacounty.gov.

When the final Environmental Impact Report is available, we would like the opportunity to review it for comment. If you have any other questions or require additional information, please contact Mr. Toan Duong at (626) 458-4945 or by e-mail at tduong@dpw.lacounty.gov.

Very truly yours,

GAIL FARBER
Director of Public Works

AL4

Responses to Comments from County of Los Angeles - Department of Public Works, Duong, Toan

Response to Comment AL4-1

These separate projects are discussed in their own EIS/EIR documents.

Response to Comment AL4-2

Yes, the Crenshaw Line is a separate project, and has its own EIS/EIR. The opening dates listed in the Long Range Transportation Plan (2009) were used in the Regional Connector Draft EIS/EIR.

Response to Comment AL4-3

Final Long Range Transportation Plan opening dates were used in the Regional Connector Draft EIS/EIR. The opening dates shown in the Draft Long Range Transportation Plan were revised in the Final Long Range Transportation Plan due to the passage of Measure R.

Response to Comment AL4-4

Preliminary evaluation of liquefaction was performed on the alignment based on the available geologic and subsurface exploration data. In-situ tests, such as standard penetration tests will be performed during the final design phase and liquefaction potential will be further evaluated to confirm findings made during preliminary engineering. Metro will commit to implementing the following mitigation measures as needed to avoid impacts: support of some structures on deep foundations such as drilled piles, or ground improvement such as deep soil mixing or stone columns.

Response to Comment AL4-5

As indicated in Section 4.9, Geotechnical/Subsurface/Seismic/Hazardous Materials, of the Draft EIS/EIR, with the implementation of mitigation, the Fully Underground LRT Alternative would result in less than significant impacts associated with hazardous materials. In addition, the Draft EIS/EIR included mitigation measures involving consistency with the goals of the City of Los Angeles Municipal Code and Methane Mitigation Standards, which control methane intrusion emanating from geologic formations and require testing of all underground segments. Mitigation requirements will be implemented according to the actual methane levels and pressures detected on a site. Metro will commit to implementing the following mitigation measures as needed to avoid impacts: both active and passive ventilation systems to ensure exchange of air, gas barriers (membranes around basements and foundations), and sensors in interior spaces to monitor the presence of gas and its pressure. Specific precautions to protect workers and the public from exposure to toxic gases would be required, and specialized excavation methods would be needed to prevent explosion.

Response to Comment AL4-6

The Los Angeles portion of the California High-Speed Rail project was considered in the analysis of cumulative impacts. As indicated in Section 4.19, Cumulative Impacts, of the Draft EIS/EIR and this Final EIS/EIR, the Regional Connector project would be constructed and operated in

coordination with the California High-Speed Rail project. Metro would also coordinate and interface with the County of Los Angeles portion of the California High-Speed Rail project.

The California High Speed Rail Authority is a participating agency and has been included in the recipient list for notices soliciting input on the project during the environmental review process.

Response to Comment AL4-7

This will be verified and identified in Special Provisions (a section in the construction contract documents).

Response to Comment AL4-8

Metro will contact the Los Angeles County Department of Public Works, Construction Division for permitting requirements pertaining to any proposed connections or alterations to Los Angeles County Flood Control District (LACFCD) facilities, and the Los Angeles County Department of Public Works, Design Division for allowable discharge to LACFCD facilities for any proposed connections to LACFCD facilities. Metro will implement specific measures if quantity of water discharged is in excess of allowable discharge. Finally, Metro will contact the Los Angeles County Department of Public Works, Program Division for agreements/requirements with Metro pertaining to any proposed connection or alterations to LACFCD facilities. This language will also be included in Special Provisions (a section in the construction contract documents).

IN REPLY PLEASE
REFER TO FILE: LD-1

Mr. David Mieger
Project Director
Los Angeles County Metropolitan Transportation Authority
One Gateway Plaza, MS 99-22-5
Los Angeles, CA 90012

Dear Mr. Mieger:

DRAFT ENVIRONMENTAL IMPACT REPORT (DEIR)
REGIONAL CONNECTOR TRANSIT CORRIDOR
METROPOLITAN TRANSPORTATION AUTHORITY (MTA)

Thank you for the opportunity to review the DEIR for the Regional Connector Transit Corridor project. The project is looking for the best approach to connect the Blue, Expo, and Gold Light Rail Transit (LRT) lines, allowing for increased transit access throughout the City of Los Angeles.

The following comments are for your consideration and relate to the environmental document only.

Services–Traffic/Access

1. The front page of the Executive Summary shows Figure ES-1, Existing and Proposed Regional Metro Rail Lines (2035). Figure ES-1 shows a Metro Rail Line Under Study, called the "Crenshaw-Prairie," and another Metro Rail Line under study called the "Westside Extension to Westwood." These two proposals are not mentioned in any detail in the report, "The Regional Connector Transit Corridor." These two proposed rail routes could have an impact on roads in the County of Los Angeles' Road Maintenance District 3 area such as Prairie Avenue, Hawthorne Boulevard, Crenshaw Boulevard, and Wilshire Boulevard. 1

2. Chapter 2 of The Regional Connector Transit Corridor report briefly mentions the Metro Crenshaw Line on page 2-11; it states that the Metro Crenshaw Line from the Metro Green Line at Aviation Boulevard to the Metro Expo Line at

Crenshaw Boulevard is an approximately 10 mile light rail or bus rapid transit system anticipated to be operational by 2019. Is this line part of another study or proposal?

3. We commented on the Crenshaw Transit Corridor Project DEIR on October 26, 2009, enclosed. Also the Crenshaw Transit Corridor project DEIR, page ES-9, Figure S-5, "Metro 2008 Draft Long-Range Transportation Plan Summary," mentioned the "Crenshaw Boulevard Corridor" under Metro Rail to be open in 2025, which contradicts the date of 2019. This same figure also shows a Wilshire Boulevard Bus Rapid Transitway Construction to be open by 2026.

If you have any questions regarding traffic/access comments, please contact Mr. Armond Ghazarian at (310) 348-6448, Extension 227, or by e-mail at aghazar@dpw.lacounty.gov.

Hazards–Geotechnical/Geology/Soils

The DEIR acknowledges that all or a portion of the site is located within a potentially liquefiable area per the State of California Seismic Hazard Zones Map–Los Angeles and Hollywood Quadrangles. However, the mitigation measures for the proposed stations/facilities located within the potentially liquefiable areas that are not supported by bedrock appear to be inadequate. Geotechnical reports addressing any future developments at this site shall recommend mitigation measures for geotechnical hazards such as liquefaction and seismic induced settlement. 1 cont'd

If you have any questions regarding geotechnical comment, please contact Mr. Jeremy Wan at (626) 458-4925 or by e-mail at jwan@dpw.lacounty.gov.

Other–Environmental Safety

There is no landfill within 1,000 feet of the proposed project; however, the DEIR indicates that the project will traverse methane zone and methane buffer zones associated with oil deposit. We, therefore, recommend that the City of Los Angeles' Building and Safety provide mitigation measures, control, and protection systems for any excavation and affected enclosed buildings and structures from possible hazardous gas intrusion.

If you have any questions regarding environmental comments, please contact Mr. Corey Mayne at (626) 458-3530 or by e-mail at cmayne@dpw.lacounty.gov.

Other-Programs

The proposed High Speed Rail project is in the vicinity of this project. The routing for the Regional Connector appears to be away from the proposed route for the High Speed Rail project. MTA should be consulting with the California High Speed Rail Authority to verify that no potential conflicts will occur. Please note that the California High Speed Rail Authority was not listed as one of the public agencies consulted.

Hazards-Flood

1. Water Resources Technical Memorandum pages 24 and 25 states, "Storm drains within the City are constructed and maintained by both the City and the Los Angeles County Flood Control District (LACFCD). The LACFCD constructs the major storm drains and open flood control channels, and the City constructs local interconnecting tributary drains. The City's system is designed to convey storm flows from a ten-year storm event while the County system is designed for a 50 year storm event."

   - Verify design storm frequency of LACFCD facilities potentially affected by the proposed project. The enclosed memorandum regarding LACFCD standards for level of flood protection is provided for your reference.

2. Water Resources Technical Memorandum pages 36 and 41 states, "Overall, however, construction of the At-Grade Emphasis LRT Alternative would be expected to result in minimal impacts and need for relocation of the current drainage system. In the case where construction activities would result in the need to relocate certain drainage infrastructure, temporary lines would be installed during the construction period. Construction of the At-Grade Emphasis LRT Alternative would have no significant impact on the overall drainage pattern in the project area."

   "As described in the analysis of storm drain impacts under the At-Grade Emphasis LRT Alternative, there could be conflicts with the existing storm drain infrastructure along the proposed alignment. Similar impacts would be expected under the Underground Emphasis LRT Alternative. The main conflicts could occur along the pipe backbone along Flower and 2nd Streets. However, design measures would be implemented in order to address potential conflicts and there would be no significant impact to the capacity of the existing system or overall direction of storm flows through the drainage infrastructure in the project area."

1 cont'd

- Contact the County of Los Angeles Department of Public Works' Construction Division for permitting requirements pertaining to any proposed connection(s) or alterations to LACFCD facilities.

- Contact Public Works' Design Division for allowable discharge to LACFCD facilities for any proposed connections to LACFCD facilities. Proposed discharges in excess of allowable discharge may require mitigation.

- Contact Public Works' Programs Development Division for agreements requirements with MTA pertaining to any proposed connection(s) or alterations to LACFCD facilities.

1 cont'd

If you have any questions regarding flood comments, please contact Ms. Lizbeth Cordova at (626) 458-4921 or by e-mail at lcordova@dpw.lacounty.gov.

If you have any other questions or require additional information, please contact Mr. Toan Duong at (626) 458-4921 or by e-mail at tduong@dpw.lacounty.gov.

Very truly yours,

GAIL FARBER

Los Angeles, CA 90012

File: SC.CE.

Dear Ms. Royball Saltarelli:

Regional Connector Transit Corridor Project - Draft EIR

This is in response to your September 13, 2010 letter requesting wastewater service information for the proposed project. The Bureau of Sanitation, Wastewater Engineering Services Division (WESD) has conducted a preliminary study of the existing sewer lines and gauges located within the vicinity of the proposed project location.

The City of Los Angeles sewer system consists of primary sewers (16-inches and larger in diameter) and secondary sewers (less than 16-inches in diameter). The secondary sewers service the property laterals and feed into the primary sewer lines. The primary sewers constitute the trunk, interceptor, and outfall portions of the system. These sewers ultimately convey the wastewater to the Hyperion Treatment Plant which has sufficient capacity for current and future development. 1

The majority of sewer lines within the proposed project area consist of secondary lines. The secondary reaches run along W 7th St, S Hill St, E Cesar E Chavez Ave, E Commercial St, and S Alameda St. The primary sewer reaches run along Flower St, E Cesar E Chavez Ave. and Alameda St near the 7th St/Metro Center, Union Square, and the Little Tokyo Stations, respectively. Gauging within the project area show relatively low flows which indicates the existing sewer system might be able to accommodate future discharges related to this project. Figure 1 shows the existing sewer lines and gauging locations along the alignment of the proposed project.

Currently, the project description lacks sufficient detail for us to conduct a detailed wastewater capacity analysis. Should the project descriptions change or more details

related to the construction dewatering flows become available, please continue to send us information so that we may determine if a sewer assessment is required in the future. 1 cont'd

If you have any questions, please call Abdul Danishwar of my staff at (323) 342-6220.

Sincerely,

Ali Poosti, Acting Division Manager
Wastewater Engineering Services Division
Bureau of Sanitation

AL6

Responses to Comments from the County of Los Angeles - Department of Public Works, Bureau of Sanitation, Poosti, Ali

Response to Comment AL6-1

Metro will coordinate with the City of Los Angeles and its departments as the design of the project progresses. Metro will provide more details related to construction dewatering flows as they become available so that a sewer assessment may be determined. This will also be listed in Special Provisions of the contract document (a section in the construction contract documents).

Regional Connector Transit Corridor

Street Lighting

Street along and adjacent to a proposed LRT tracks and subway will require lighting improvements to meet current City of Los Angeles Standards. BSL will require installation of new lighting system in public areas that have no existing lighting before construction of the LRT. BSL will require increase of existing lighting with LEDs (light emitting diodes) light source (BSL). LED lights provide beneficial environmental impact with improved energy efficiency.

Any major street work that takes place should give consideration to the impact of existing public lighting and requirements to future lighting improvements. Any modifications of the present street layout (stripping, parking lane removal, right of way acquisition, bike lane, etc.) and circulation of traffic/pedestrians most likely will involve redesign and reconstruction of the lighting system for the new configuration (BSL).

Any street/pedestrian lighting improvements that create new assessments or increase existing assessments to property owners will require the Proposition 218 process to take effect. This process not only requires community participation but also their approval throughout a ballot process. This process typically takes about 6 months to complete. The lighting assessment is paid by property owners through the County Property Tax Bill. Assessments must be confirmed by City Council before commencing construction of the street lighting system (BSL).

If the project impacts area that contain expensive Historical/Ornamental poles in the City of Los Angeles, these Historical/Ornamental street lights shall be retained and improved (refurbished and upgraded) in the proposed project area. If there are new street lights to be installed along with the existing Historical/Ornamental street lights, BSL will require new street lights for these area to match the existing Historical/Ornamental street lights (BSL).

Temporary street lighting is required as a part of this project. Number of temporary units installed and the spacing between adjacent locations will match the existing street lighting system in service on a one for one basis (BSL).

Park and Ride facilities and parking lots design shall include public street and pedestrian lighting improvements in and around the facilities that meet current BSL standards (BSL).

Subject: Regional Connector Transit Corridor Project
Draft Environmental Impact Statement/Environmental Report

Dear Ms. Saltarelli and Mr. Tellis:

Thank you for the opportunity to review and comment on the Draft Environmental Impact Statement/Environmental Report for the Regional Connector Transit Corridor Project.

Throughout the Regional Connector DEIS/EIR , the regional Connector is described to allow a "one seat ride from Long Beach to Azusa" , however the Foothill Extension according to Measure R and the Authority's enabling legislation defines the project to Claremont. The Metro Gold Line Foothill Extension Construction Authority recently adopted a resolution to support the 30/10- initiative with the same clarification. As you know, Metro unanimously approved a resolution on October 22, 2009 stating "As a first priority, pursue other potential funding sources, excluding federal New Starts, which are not currently included in the 2009 LRTP, to be programmed to close the funding gaps on the Gold Line Foothill Extension and Crenshaw/LAX Transit Corridor." This commitment to the Project to Claremont allows for an additional 11.5 miles of light rail to the county line providing a one seat ride from Long Beach to Claremont. 1

Again, we thank you for this opportunity and look forward to the project's successful completion from Long Beach to Claremont.

Sincerely,

Keith Hanks
Chairman

Cc: Construction Authority Board of Directors
Habib F. Balian

AL8

Responses to Comments from Metro Gold Line Foothill Extension Construction Authority, Hanks, Keith

Response to Comment AL8-1

The Draft EIS/EIR studied a future baseline year of 2035, at which time the Metro Gold Line Foothill Extension would be completed to Azusa per the 2009 Metro Final Long Range Transportation Plan. The extension farther to Claremont was not included in modeling assumptions because it is expected to be completed after 2035. The eventual terminus of the Foothill Extension project is now expected to be Montclair. For purposes of consistency in identifying the project, the North-South Line is now described in this Final EIS/EIR as running from Long Beach to Montclair.

Los Angeles, California 90012

Review of the Draft Environmental Impact Report (Draft EIR) for the Regional Transit Corridor Project

The South Coast Air Quality Management District (AQMD) appreciates the opportunity to comment on the above-mentioned document. The following comment is intended to provide guidance to the lead agency and should be incorporated into the final Environmental Impact Report (EIR) as appropriate. 1

Based on a review of the draft EIR the AQMD staff is concerned about the significant regional construction air quality impacts from the proposed project. In order to reduce regional air quality impacts, AQMD staff recommends that the lead agency require additional mitigation to reduce diesel equipment exhaust emissions during construction activities. 2

Pursuant to Public Resources Code Section 21092.5, please provide the AQMD with written responses to all comments contained herein prior to the adoption of the final EIR. Further, staff is available to work with the lead agency to address these issues and any other questions that may arise. Please contact Dan Garcia, Air Quality Specialist CEQA Section, at (909) 396-3304, if you have any questions regarding the enclosed comments. 3

Sincerely,

Ian MacMillan
Program Supervisor, CEQA Inter-Governmental Review
Planning, Rule Development & Area Sources

AR1

Construction Equipment Mitigation Measures

1. Given that the lead agency's regional construction air quality analysis demonstrates that the criteria pollutant emissions will exceed the AQMD's daily significance thresholds for NOX, VOC, CO, and PM2.5 for each build alternative and PM10 for the At-Grade Emphasis LRT Alternative AQMD recommends that the lead agency consider adding the following mitigation measures to further reduce air quality impacts from the project, if feasible: 4

   - Configure construction parking to minimize traffic interference,
   - Provide temporary traffic controls such as a flag person, during all phases of construction to maintain smooth traffic flow, 5
   - Provide dedicated turn lanes for movement of construction trucks and equipment on- and off-site, 6
   - Reroute construction trucks away from sensitive receptor areas, 7
   - Improve traffic flow by signal synchronization, 8
   - Ensure that all vehicles and equipment will be properly tuned and maintained according to manufacturers' specifications, 9
   - Require the use of electricity from power poles rather than temporary diesel or gasoline power generators, and 10
   - Consistent with measures that other lead agencies in the region (including Port of Los Angeles and Port of Long Beach) have enacted, require all on-site construction equipment to meet EPA Tier 2 or higher emissions standards according to the following: 11

     ✓ April 1, 2010, to December 31, 2011: All offroad diesel-powered construction equipment greater than 50 hp shall meet Tier 2 offroad emissions standards. In addition, all construction equipment shall be outfitted with the BACT devices certified by CARB. Any emissions control device used by the contractor shall achieve emissions reductions that are no less than what could be achieved by a Level 2 or Level 3 diesel emissions control strategy for a similarly sized engine as defined by CARB regulations.

     ✓ January 1, 2012, to December 31, 2014: All offroad diesel-powered construction equipment greater than 50 hp shall meet Tier 3 offroad emissions standards. In addition, all construction equipment shall be outfitted with BACT devices certified by CARB. Any emissions control device used by the contractor shall achieve emissions reductions that are no less than what could be achieved by a Level 3 diesel emissions control strategy for a similarly sized engine as defined by CARB regulations.

- ✓ Post-January 1, 2015: All offroad diesel-powered construction equipment greater than 50 hp shall meet the Tier 4 emission standards, where available. In addition, all construction equipment shall be outfitted with BACT devices certified by CARB. Any emissions control device used by the contractor shall achieve emissions reductions that are no less than what could be achieved by a Level 3 diesel emissions control strategy for a similarly sized engine as defined by CARB regulations.

- ✓ A copy of each unit's certified tier specification, BACT documentation, and CARB or AQMD operating permit shall be provided at the time of mobilization of each applicable unit of equipment.

11 cont'd

- ❖ For additional measures to reduce off-road construction equipment, refer to the mitigation measure tables located at the following website: www.aqmd.gov/ceqa/handbook/mitigation/MM_intro.html.

12

- ❖ The lead agency should consider encouraging construction contractors to apply for AQMD "SOON" funds. As an example, incentives could be provided in the bidding process for those construction contractors who apply for AQMD "SOON" funds. More information on this program can be found at the following website: http://www.aqmd.gov/tao/Implementation/SOONProgram.htm

13

AR1

Responses to Comments from the South Coast Air Quality Management District, MacMillan, Ian

Response to Comment AR1-1

Comment acknowledged. Please refer to Responses to Comments AR1-2 through AR1-13, below, for detailed responses regarding concerns raised by the South Coast Air Quality Management District (SCAQMD).

Response to Comment AR1-2

Metro has added additional air quality mitigation measures in Section 4.5.4.2 and the Mitigation Monitoring and Reporting Program for the Locally Preferred Alternative (Chapter 8) of this Final EIS/EIR. These are described in Responses to Comments AF2-6 through AF2-9, above, and AR1-4 through AR1-11, below. However, even with implementation of these additional mitigation measures, significant construction-related air quality impacts may still occur, as shown in Table 4.5-6 of the Draft EIS/EIR and this Final EIS/EIR.

Response to Comment AR1-3

Comment acknowledged. In accordance with Public Resources Code Section 21092.5, Metro will provide the SCAQMD written responses to their comments ten days prior to certification of this Final EIS/EIR.

Response to Comment AR1-4

After mitigation, construction emissions for all build alternatives would exceed SCAQMD thresholds of significance for VOC, NO_x, and CO, as shown in Table 4.5-6 of the Draft EIS/EIR and this Final EIS/EIR. None of the build alternatives would exceed the PM10 threshold of significance.

The following mitigation measure has been added to Section 4.5.4.2 of this Final EIS/EIR and the Mitigation Monitoring and Reporting Program for the Locally Preferred Alternative (Chapter 8):

Construction worker parking shall be configured to minimize traffic interference. This measure would minimize vehicle idling time, which would reduce emissions generated from construction vehicles.

Generally, the construction contractor will be required to address this concern.

Response to Comment AR1-5

The following mitigation measure has been added to Section 4.5.4.2 of this Final EIS/EIR and the Mitigation Monitoring and Reporting Program for the Locally Preferred Alternative (Chapter 8):

Construction activity that affects traffic flow on the arterial system, including the transportation of excavated materials, shall be primarily limited to off-peak hours. This measure would

minimize vehicle idling time, which would reduce emissions generated from construction vehicles.

Generally, the construction contractor will be required to address this concern.

Response to Comment AR1-6

The following mitigation measure has been added to Section 4.5.4.2 of this Final EIS/EIR and the Mitigation Monitoring and Reporting Program for the Locally Preferred Alternative (Chapter 8):

Dedicated turn lanes for the movement of trucks and equipment to and from construction sites shall be provided where appropriate. This measure would minimize vehicle idling time, which would reduce emissions generated from construction vehicles.

Generally, the construction contractor will be required to address this concern.

Response to Comment AR1-7

This mitigation measure was identified in Sections 3.4.1.2 and 4.7.4.1 of the Draft EIS/EIR and Sections 3.4.2 and 4.7.4.2 of this Final EIS/EIR for noise and vibration sensitive receptors, and would have a similar mitigating effect for air quality impacts.

Response to Comment AR1-8

As discussed in Section 3.4.1.2 of the Draft EIS/EIR and Section 3.4.2 of this Final EIS/EIR, Metro will work with the Los Angeles Department of Transportation to accommodate the required traffic movements in the vicinity of construction activities. This includes adjustment of traffic signal coordination where appropriate. Generally, the construction contractor will be required to address this concern.

Response to Comment AR1-9

The following mitigation measure has been added to Section 4.5.4.2 of this Final EIS/EIR and the Mitigation Monitoring and Reporting Program for the Locally Preferred Alternative (Chapter 8):

Metro shall require ongoing maintenance and adherence to manufacturer's specifications for all construction equipment engines and vehicles.

Generally, the construction contractor will be required to address this concern.

Response to Comment AR1-10

The following mitigation measure has been added to Section 4.5.4.2 of this Final EIS/EIR and the Mitigation Monitoring and Reporting Program for the Locally Preferred Alternative (Chapter 8):

Contractors shall utilize electricity supplied by the Los Angeles Department of Water and Power (LADWP) rather than temporary diesel or gasoline generators, as feasible.

Response to Comment AR1-11

Metro will adhere to all applicable EPA requirements. The following mitigation measure has been added to Section 4.5.4.2 of this Final EIS/EIR and the Mitigation Monitoring and Reporting Program for the Locally Preferred Alternative (Chapter 8):

Metro shall require on-site construction equipment to meet EPA Tier 2 or higher emission standards according to the January 1, 2012 to December 31, 2014 and post-January 15, 2015 criteria.

Response to Comment AR1-12

Metro has reviewed the website and appreciates the additional information, and has incorporated the mitigation measures at www.aqmd.gov/ceqa/handbook/mitigation/MM_intro.html to the extent feasible.

Response to Comment AR1-13

Metro has reviewed the website and will consider encouraging construction contractors to apply as requested, and will incorporate incentives where feasible.

RE: SCAG Comments on the Draft Environmental Impact Report for the Regional Connector Transit Corridor Project [SCAG No. I20100309]

Dear Ms. Roybal Saltarelli,

Thank you for submitting the **Draft Environmental Impact Report for the Regional Connector Transit Corridor Project [SCAG No. I20100309]** to the Southern California Association of Governments (SCAG) for review and comment. SCAG is the authorized regional agency for Inter-Governmental Review of Programs proposed for federal financial assistance and direct development activities, pursuant to Presidential Executive Order 12372 (replacing A-95 Review). Additionally, pursuant to Public Resources Code Section 21083(d) SCAG reviews Environmental Impacts Reports of projects of regional significance for consistency with regional plans per the California Environmental Quality Act Guidelines, Sections 15125(d) and 15206(a)(1). SCAG is also the designated Regional Transportation Planning Agency and as such is responsible for both preparation of the Regional Transportation Plan (RTP) and Federal Transportation Improvement Program (FTIP) under California Government Code Section 65080 and 65082. As the clearinghouse for regionally significant projects per Executive Order 12372, SCAG reviews the consistency of local plans, projects, and programs with regional plans. This activity is based on SCAG's responsibilities as a regional planning organization pursuant to state and federal laws and regulations. Guidance provided by these reviews is intended to assist local agencies and project sponsors to take actions that contribute to the attainment of regional goals and policies. 1

SCAG staff has reviewed this project and determined that the proposed project is regionally significant per California Environmental Quality Act (CEQA) Guidelines, Sections 15125 and/or 15206. The proposed project would implement a light rail connector in downtown Los Angeles that will directly link the tracks of the Metro Gold Line light rail system with the Metro Blue Line and future Metro Expo Line.

We have evaluated this project based on the policies of SCAG's Regional Transportation Plan (RTP) and Compass Growth Vision Principles that may be applicable to your project. The RTP and Compass Growth Visioning Principles can be found on the SCAG web site at: http://scag.ca.gov/igr. The attached detailed comments are meant to provide guidance for considering the proposed project within the context of our regional goals and policies. We also encourage the use of the SCAG List of Mitigation Measures extracted from the RTP to aid with demonstrating consistency with regional plans and policies. Please send a copy of the Final Environmental Impact Report (FEIR) ONLY to SCAG's main office in Los Angeles for our review. If you have any questions regarding the attached comments, please contact Bernard Lee at (213) 236-1895. Thank you.

Sincerely,

Huasha Liu, Director
Land Use and Environmental Planning

October 20, 2010
Ms. Roybal Saltarelli

SCAG No. I20100309

COMMENTS ON THE DRAFT ENVIRONMENTAL IMPACT REPORT FOR THE REGIONAL CONNECTOR TRANSIT CORRIDOR PROJECT [SCAG NO. I20100309]

PROJECT LOCATION

The project area is located in downtown Los Angeles. It is bounded on the west by State Route (SR) 110 (Harbor Freeway); on the north by US 101 (Hollywood Freeway); on the south by 7th and 9th Streets; and on the east by Alameda Street between 7th and 4th Streets and the Los Angeles River between 4th Street and US 101.

The project area is the largest regional employment center in Los Angeles County, and is densely developed with multi-family residences, industrial and public lands, commercial and retail establishments, government office buildings, and high-rise office towers. The corridor crosses several distinct community areas including the dense urban core of the Financial District; the residential high rises and regional entertainment centers of Bunker Hill; the Civic Center with a concentration of federal, state, and local government offices; residential and retail uses located in the historic structures of the Historic Core; and the culturally unique, mixed uses of Little Tokyo.

Depending on which alternative is selected, the Regional Connector Transit Corridor project could involve construction and operation of a 1.6 to 1.9 mile light rail transit (LRT) connector that would link the Metro Blue Line, Metro Gold Line, and future Metro Expo Line into a single consolidated system. All proposed build alternatives would begin underground at the existing Metro Blue Line (and future Metro Expo Line) platform at 7th Street/Metro Center Station and extend in a northeastern direction to a new junction with the Metro Gold Line near Alameda Street. In addition to the LRT alternatives, a No Build Alternative and a Transportation System Management (TSM) Alternative are being studied.

2

PROJECT DESCRIPTION

The Regional Connector project would implement a light rail connector in downtown Los Angeles that will directly link the tracks of the Metro Gold Line light rail system with the Metro Blue Line and future Metro Expo Line. The connector would run from the current Metro Blue Line terminus at 7th Street/Metro Center Station to a point on the Metro Gold Line near the Little Tokyo/Arts District Station.

Alternatives under consideration include a No Build Alternative, Transportation Systems Management (TSM) Alternative, At-Grade Emphasis LRT Alternative, Underground Emphasis LRT Alternative, and Fully Underground LRT Alternative.

- No Build
  The No Build Alternative is the future scenario without the proposed build alternatives. The No Build Alternative does not include any major service improvements or new transportation infrastructure beyond what is listed in Metro's 2009 LRTP.

- TSM
  The TSM Alternative includes all of the provisions of the No Build Alternative, plus two new express shuttle bus lines linking the 7th Street/Metro Center and Union Stations. These buses would run frequently, just a few minutes apart, especially during peak hours. Enhanced bus stops would be located every two to three blocks, so as to maximize coverage of the area surrounding the routes. Rail service would remain the same as described for the No Build Alternative.

- At-Grade Emphasis LRT Alternative
  The At-Grade Emphasis LRT Alternative would provide a direct connection from the existing underground 7th Street/Metro Center Station to the Metro Gold Line at Temple and Alameda

Streets with three new station locations. This alignment includes a combination of underground and at-grade segments, with 46 percent of the route underground. New stations would serve the Civic Center, Grand Avenue, and the Financial District. Portions of 2nd Street along the alignment would be converted to a pedestrian-friendly transit mall. To implement this alternative, the number of traffic lanes and on-street parking spaces would be reduced on 2nd Street between Figueroa and Los Angeles Streets. Roadway capacity along adjacent streets such as 1st and 3rd Streets would remain unchanged, as with the No Build Alternative.

- Underground Emphasis LRT Alternative
  The Underground Emphasis LRT Alternative would provide a direct connection from 7th Street/Metro Center Station to the Metro Gold Line tracks at the Little Tokyo/Arts District Station with three new station locations. The alignment would extend underground from the 7th Street/Metro Center Station beneath Flower Street to 2nd Street. The tracks would then proceed east underneath the 2nd Street tunnel and 2nd Street to a new portal on the parcel bounded by 1st Street, Alameda Street, 2nd Street, and Central Avenue. It is anticipated that some of this parcel would need to be acquired to construct the portal and stage construction of the tunnels beneath 2nd Street. The new tracks would then connect to the tracks of the Metro Gold Line at grade. The Underground Emphasis LRT Alternative would be entirely located underground except for a single at-grade crossing at the intersection of 1st and Alameda Streets. The tracks would cross in the same type of three-way (wye) junction as proposed for the At-Grade Emphasis LRT Alternative.

- Fully Underground LRT Alternative
  The Fully Underground LRT Alternative is essentially the same configuration as the Underground Emphasis LRT Alternative, except that it provides for four new underground stations instead of three. It travels under the intersection of 1st and Alameda rather than crossing at-grade, and it then connects to the Metro Gold Line within 1st Street and north of Temple Street. The alignment would extend underground from the 7th Street/Metro Center Station under Flower Street to 2nd Street. Tracks would then proceed east underneath the 2nd Street tunnel and 2nd Street to Central Avenue. At 2nd Street and Central Avenue, the tracks would continue underground heading northeast under 1st and Alameda Streets. An underground junction would be constructed beneath the intersection of 1st Street and Alameda Street. Unlike the Underground Emphasis LRT Alternative, two portals would be needed because the junction between Regional Connector and the Pasadena/Azusa and East Los Angeles/I-605 branches of the Metro Gold Line would be located underground. The new portals would be located to the north and east of the junction, where trains would rise to the surface to connect to the Metro Gold Line heading north to Azusa and east to I-605.

2 cont'd

CONSISTENCY WITH REGIONAL TRANSPORTATION PLAN

Regional Growth Forecasts

The Draft Environmental Impact Report (DEIR) should reflect the most recently adopted SCAG forecasts, which are the 2008 RTP (May 2008) Population, Household and Employment forecasts. The forecasts for your region, subregion, and city are as follows:

3

Adopted SCAG Regionwide Forecasts[1]

	2010	2015	2020	2025	2030	2035
Population	19,418,344	20,465,830	21,468,948	22,395,121	23,255,377	24,057,286
Households	6,086,986	6,474,074	6,840,328	7,156,645	7,449,484	7,710,722
Employment	8,349,453	8,811,406	9,183,029	9,546,773	9,913,376	10,287,125

Adopted City of Los Angeles Subregion Forecasts[1]

	2010	2015	2020	2025	2030	2035
Population	4,057,484	4,128,125	4,204,329	4,277,732	4,348,282	4,415,773
Households	1,366,985	1,424,701	1,485,519	1,532,998	1,578,850	1,616,578
Employment	1,820,092	1,864,061	1,892,139	1,925,148	1,960,393	1,994,134

Adopted City of Los Angeles Forecasts[1]

	2010	2015	2020	2025	2030	2035
Population	4,140,516	4,214,082	4,292,139	4,367,538	4,440,017	4,509,435
Households	1,386,658	1,445,177	1,506,564	1,554,478	1,600,754	1,638,823
Employment	1,860,672	1,905,337	1,933,860	1,967,393	2,003,196	2,037,472

1. The 2008 RTP growth forecast at the regional, subregional, and city level was adopted by the Regional Council in May 2008.

3 cont'd

SCAG Staff Comments:

As indicated in Section 4.16 (Growth Inducing), employment and population growth projections are based on the SCAG 2008 RTP growth forecast.

The **2008 Regional Transportation Plan (RTP)** also has goals and policies that are pertinent to this proposed project. This RTP links the goal of sustaining mobility with the goals of fostering economic development, enhancing the environment, reducing energy consumption, promoting transportation-friendly development patterns, and encouraging fair and equitable access to residents affected by socio-economic, geographic and commercial limitations. The RTP continues to support all applicable federal and state laws in implementing the proposed project. Among the relevant goals and policies of the RTP are the following:

Regional Transportation Plan Goals:

RTP G1 *Maximize mobility and accessibility for all people and goods in the region.*
RTP G2 *Ensure travel safety and reliability for all people and goods in the region.*
RTP G3 *Preserve and ensure a sustainable regional transportation system.*
RTP G4 *Maximize the productivity of our transportation system.*
RTP G5 *Protect the environment, improve air quality and promote energy efficiency.*
RTP G6 *Encourage land use and growth patterns that complement our transportation investments.*
RTP G7 *Maximize the security of our transportation system through improved system monitoring, rapid recovery planning, and coordination with other security agencies.*

SCAG Staff Comments:

SCAG staff finds that the proposed project meets consistency with Regional Transportation Plan Goals.

4

The proposed project meets consistency with RTP G1. Mobility pertains to the speed at which one may travel and the delay, or difference between the actual travel time and travel time that would be experienced if a person traveled at the legal speed limit. The proposed project is expected to improve mobility by reducing delays at several intersections in the study area during AM and PM peak periods, relative to the No Build and TSM scenarios (indicated in Table 3-11). Accessibility measures how well the transportation system provides people access to opportunities, such as jobs, education, shopping, recreation, and medical care. The proposed project would provide a faster and more reliable connection between Pasadena/Azusa and Long Beach and East LA and Culver City. In addition, depending on the alternative selected, the project may add additional stations serving Downtown Los Angeles, which would provide increased access to employment and other opportunities in that area.

With regard to RTP G2, the proposed project meets consistency. The RTP aims to improve safety by minimizing accidents. Mitigation measures described in Section 4.15.4 would be incorporated to ensure passenger safety. Reliability reflects the degree to which travelers experience variation in trip times from day to day. As indicated on page 3-2, "Transit impacts and consequences include estimated benefits associated with each alternative, such as travel speeds and times, greater service reliability, and estimated higher ridership."

The proposed project meets consistency with RTP G3. Programmed funds for the operations and maintenance of the project are identified on pages 6-12 to 6-15.

With regard to RTP G4, the proposed project meets consistency. Productivity is a system efficiency measure that reflects the degree to which the transportation system performs during peak demand conditions. As mentioned previously, the proposed project would reduce delays at several intersections in the study area during AM and PM peak periods.

4 cont'd

The proposed project meets consistency with RTP G5. Per page 4-80, "All of the build alternatives would have no adverse or significant effects from operational emissions. Although regional construction emissions under the build alternatives would be significant and unavoidable, the net benefits to air quality associated with the reduction in regional VMT would override the temporary adverse construction impacts and provide a net beneficial effect."

With regard to RTP G6, the proposed project meets consistency. As indicated on page 1-2, "Local land use plans and policies support increased transit alternatives, linking the regional system through downtown, and transit and pedestrian friendly design in downtown communities."

The proposed project meets consistency with RTP G7. Mitigation measures described in Section 4.15.4 would be incorporated to ensure security of the system.

COMPASS GROWTH VISIONING

The fundamental goal of the **Compass Growth Visioning** effort is to make the SCAG region a better place to live, work and play for all residents regardless of race, ethnicity or income class. Thus, decisions regarding growth, transportation, land use, and economic development should be made to promote and sustain for future generations the region's mobility, livability and prosperity. The following "Regional Growth Principles" are proposed to provide a framework for local and regional decision making that improves the quality of life for all SCAG residents. Each principle is followed by a specific set of strategies intended to achieve this goal.

Principle 1: Improve mobility for all residents.

5

GV P1.1 *Encourage transportation investments and land use decisions that are mutually supportive.*
GV P1.2 *Locate new housing near existing jobs and new jobs near existing housing.*
GV P1.3 *Encourage transit-oriented development.*
GV P1.4 *Promote a variety of travel choices*

SCAG Staff Comments:

Where applicable, SCAG staff finds that the proposed project meets consistency with Principle 1. GV P1.2 is not applicable.

The proposed project meets consistency with GV P1.1 as it would improve access to destinations along the entire rail network and per page 1-2, "The LRT alternatives would also correct the lack

of rail system access to important business, cultural and residential destinations in downtown Los Angeles, enhancing access to and from these destinations and community resources."

With regard to GV P1.3, the proposed project meets consistency. Per page 1-2, "The Regional Connector LRT alternatives would enhance and leverage the existing regional rail system investment by making travel easier and attracting ridership systemwide, and by indirectly enhancing development potential at all system stations including the new downtown Regional Connector stations."

The proposed project meets consistency with GV P1.4, as it would enhance transit service, supporting the use of public transit as a travel mode.

5 cont'd

Principle 2: Foster livability in all communities.

GV P2.1 *Promote infill development and redevelopment to revitalize existing communities.*
GV P2.2 *Promote developments, which provide a mix of uses.*
GV P2.3 *Promote "people scaled," walkable communities.*
GV P2.4 *Support the preservation of stable, single-family neighborhoods.*

SCAG Staff Comments:

Where applicable, SCAG staff finds that the proposed project meets consistency with Principle 2. GV P2.4 is not applicable.

SCAG staff finds that the project is consistent with GV P2.1, as it would promote development and redevelopment of infill properties located near potential new rail stations, as well as increase the desirability of infill properties along the entire rail network.

With regard to GV P2.2 and P2.3, the proposed project meets consistency because it would promote pedestrian-oriented mixed-use developments throughout the region. As mentioned on page 1-33, "Improving public transit connectivity in the project area offers opportunities to increase ridership through access to regional transit markets. Balanced local land use and transportation policies can reduce auto travel and support more pedestrian-friendly, mixed-use and transit-oriented developments throughout the region."

6

Principle 3: Enable prosperity for all people.

GV P3.1 *Provide, in each community, a variety of housing types to meet the housing needs of all income levels.*
GV P3.2 *Support educational opportunities that promote balanced growth.*
GV P3.3 *Ensure environmental justice regardless of race, ethnicity or income class.*
GV P3.4 *Support local and state fiscal policies that encourage balanced growth*
GV P3.5 *Encourage civic engagement.*

SCAG Staff Comments:

SCAG staff finds that this project is consistent with P3.3. The Little Tokyo Working Group developed a list of mitigation measures that have not been evaluated or accepted by Metro and FTA, but as mentioned on page 4-311, "will be evaluated to determine efficacy, cost, community acceptance, and relevance to specific impacts" during preparation of Final EIR/EIS.

Principles GV P3.1, P3.2, P3.4 and P3.5 are not applicable.

7

Principle 4: Promote sustainability for future generations.

GV P4.1 *Preserve rural, agricultural, recreational, and environmentally sensitive areas*
GV P4.2 *Focus development in urban centers and existing cities.*
GV P4.3 *Develop strategies to accommodate growth that uses resources efficiently, eliminate pollution and significantly reduce waste.*
GV P4.4 *Utilize "green" development techniques*

SCAG Staff Comments:

Where applicable, SCAG staff finds that the project is consistent with Principle 4. Principles GV P4.1 and P4.4 are not applicable.

The proposed project meets consistency with GV P4.2, as it would encourage development within urban centers.

The proposed project meets consistency with GV P4.3. As mentioned earlier, the proposed project would improve overall air quality. Per page 4-160, "all of the alternatives would result in a net decrease in VMT throughout the region when compared to the No Build Alternative. This decrease in VMT would result in a net decrease in energy consumption, with the Fully Underground LRT Alternative having the greatest decrease. 8

CONCLUSION

Where applicable, the proposed project meets consistency with SCAG Regional Transportation Plan Goals and also meets consistency with Compass Growth Visioning Principles. 9

All feasible measures needed to mitigate any potentially negative regional impacts associated with the proposed project should be implemented and monitored, as required by CEQA. We recommend that you review the SCAG List of Mitigation Measures for additional guidance, and encourage you to follow them, where applicable to your project. The SCAG List of Mitigation Measures may be found here: http://www.scag.ca.gov/igr/documents/SCAG_IGRMMRP_2008.pdf 10

When a project is of statewide, regional, or areawide significance, transportation information generated by a required monitoring or reporting program shall be submitted to SCAG as such information becomes reasonably available, in accordance with CEQA, Public Resource Code Section 21081.7, and CEQA Guidelines Section 15097 (g). 11

AR2

Responses to Comments from the Southern California Association of Governments, Liu, Huasha

Response to Comment AR2-1

Comment acknowledged. Please refer to Responses to Comments AR2-2 through AR2-11, below, for detailed responses regarding concerns raised by the Southern California Association of Governments (SCAG). Metro has reviewed the SCAG List of Mitigation Measures and incorporated guidance where applicable in the Mitigation Monitoring and Reporting Program for the Locally Preferred Alternative (Chapter 8).

Response to Comment AR2-2

Comment acknowledged.

Response to Comment AR2-3

Comment acknowledged. Section 4.16, Growth-Inducing, of the Draft EIS/EIR reflected the most recently adopted SCAG Integrated Growth Forecasts for population, household, and employment. Tables 4.16-1, 4.16-3, and 4.16-4 of the Draft EIS/EIR have been updated in this Final EIS/EIR to correct minor typographical errors with the forecasts.

Response to Comment AR2-4

Comment acknowledged. Metro concurs with SCAG's determination that the project is consistent with the 2008 Regional Transportation Plan (RTP), including the Regional Transportation Plan Goals. This letter, along with the consistency analysis, is incorporated by reference in Volume F-2 of this Final EIS/EIR.

Response to Comment AR2-5

Comment acknowledged. Metro concurs with SCAG's determination that the project is consistent with SCAG's Compass Growth Visioning report. This letter, along with the consistency analysis, is incorporated by reference in Volume F-2 of this Final EIS/EIR.

Response to Comment AR2-6

Please refer to Response to Comment AR2-5, above.

Response to Comment AR2-7

Please refer to Response to Comment AR2-5, above.

Response to Comment AR2-8

Please refer to Response to Comment AR2-5, above.

Response to Comment AR2-9

Comment acknowledged. Metro concurs with SCAG's determination that the project is consistent with SCAG RTP and Compass Growth Visioning report.

Response to Comment AR2-10

Comment acknowledged. Mitigation measures identified in the Draft EIS/EIR to reduce significant impacts associated with the Locally Preferred Alternative have been included in the Mitigation Monitoring and Reporting Program for the Locally Preferred Alternative (Chapter 8) of this Final EIS/EIR. Metro has reviewed the SCAG List of Mitigation Measures and incorporated guidance where applicable in the Mitigation Monitoring and Reporting Program for the Locally Preferred Alternative.

Response to Comment AR2-11

Comment acknowledged. Metro will send SCAG any transportation information generated by the Mitigation Monitoring and Reporting Program for the Locally Preferred Alternative (Chapter 8) of this Final EIS/EIR in accordance with Public Resources Code Section 21081.7 and CEQA Guidelines Section 15097(g).

IGR/CEQA DEIR/DEIS CS/100923
Regional Connector Transit Corridor Project
Vic. LA-101-S0.9/0.7, SCH# 2009031043

Ms. Dolores Roybal Saltarelli
Los Angeles County Metropolitan Transportation Authority
One Gateway Plaza
Los Angeles, CA 90012

Dear Ms. Roybal Saltarelli:

Thank you for including the California Department of Transportation (Caltrans) in the environmental review process for the Draft Environmental Impact Statement/Draft Environmental Impact Report for the Regional Connector Transit Corridor Project. The project would directly link the Gold Line from the San Gabriel Valley to the Blue Line in Long Beach and the Gold Line in East Los Angeles to the Expo Line to Santa Monica. Based on the information received, we have the following comments:

The fully underground alternative would have less impact on peak period traffic circulation in the downtown area. Also, street events such as parades, demonstrations, street fairs, etc., in various downtown venues would be impacted by an at-grade light rail transit facility. 1

The location of a transit station along 2nd Street between Main Street and Los Angeles Street will need to be coordinated with affected owner/operators in the area including Caltrans. 2

Traffic Management Plans involving lane closures or street detours which will impact the circulation system affecting traffic to and from freeway on/off-ramps should be coordinated with Caltrans. 3

We recommend that construction related truck trips on State Highways be limited to off-peak commute periods. Transport of over-size or over-weight vehicles on State Highways will need a Caltrans Transportation Permit. The contractor should avoid 4

platooning of truck trips on mainline freeways, on freeway on/off-ramps and at freeway ramp intersections. 4 cont'd

If you have any questions regarding our comments, contact Carl Shiigi, Project Coordinator, at (213) 897-1726 and please refer to record number 100923/CS.

Sincerely,

DIANNA WATSON
IGR/CEQA Program Manager
Office of Regional Planning

cc: Scott Morgan, State Clearinghouse

AS1

Responses to Comments from the State of California - Department of Transportation, District 7, Watson, Dianna

Response to Comment AS1-1

Comment acknowledged. The Metro Board of Directors voted on October 28, 2010 to designate the Fully Underground LRT Alternative as the Locally Preferred Alternative. The Locally Preferred Alternative is grade-separated. Therefore, the concern stated in this comment regarding operation of an at-grade LRT system is not an issue under the Locally Preferred Alternative.

Response to Comment AS1-2

The comment is noted and will be addressed during the final design phase of the project once the construction sequence is identified and construction activities are determined. Continuous coordination with Caltrans will take place throughout the design process.

Response to Comment AS1-3

The comment is noted and continuous coordination with Caltrans will take place throughout the final design process. Once the construction sequence is identified and construction activities are confirmed, a traffic management plan (TMP) will be developed showing potential lane closures and street detours. The TMP will be submitted to Caltrans staff for review and comment.

Response to Comment AS1-4

As indicated in Chapter 3, Transportation Impacts and Mitigation, of the Draft EIS/EIR and this Final EIS/EIR, truck haul trips would be scheduled along existing freight routes during off-peak hours. Metro will continue to coordinate with Caltrans throughout the design and construction process and will acquire appropriate permits for construction of the Locally Preferred Alternative, which may include a Caltrans Transportation Permit if over-size or over-weight vehicles travel on State Highways during construction. Once construction lay down areas are identified, haul routes will be finalized and submitted to Caltrans for review. The platooning of truck trips on mainline freeways, freeway on/off-ramps, and freeway ramp intersections would be minimized.

Re: Comments on Draft EIR / EIS for the Regional Connector Transit Corridor Project

Dear Ms. Roybal Saltarelli,

Thank you for the opportunity to comment on the Draft Environmental Impact Statement / Environmental Impact Report (EIR / EIS) for the above referenced project. The California Department of Transportation (Caltrans), Division of Environmental Planning (DEP) has the following comments for consideration in the Final EIR / EIS:

1. As this project moves forward please be advised that construction activities adjacent to the Caltrans facility need to be investigated / reviewed with State Structural Engineers and the Department of General Services (DGS) to determine the potential consequences of construction on our facility and daily operations. 1

2. During construction the notification and coordination on closures and detours plans would need to be review by Caltrans to minimize disruption at the Caltrans District 7 office building. 2

3. In the Appendix D section; please remove Gary Iverson and Garrett Damrath as a contact persons for the Caltrans DEP organization and add Dawn Kukla, Senior Environmental Planner to the project list. Also, please include the title "Associate Environmental Planner" to Brian Manor in the same Appendix D section. 3

We trust that you will continue to inform our office of any future meetings and we look forward to working with you on this important transportation project. 4

If you have any questions regarding these comments, please do not hesitate to contact Dawn Kukla at 213-897-3643.

Sincerely,

Ronald Kosinski

RONALD KOSINSKI
Deputy Director
Division of Environmental Planning
Caltrans-District 7

AS2

Responses to Comments from the State of California - Department of Transportation, District 7, Kosinski, Ronald

Response to Comment AS2-1

Construction impacts associated with the project were analyzed in Section 4.18, Construction Impacts, of the Draft EIS/EIR and this Final EIS/EIR. As indicated in Section 4.3, Community and Neighborhood Impacts, mitigation to reduce community and neighborhood impacts during construction of the Locally Preferred Alternative involves the development of a community outreach plan to notify local communities of construction schedules, street lane and sidewalk closures, and detours. In addition, Metro will continue coordinating with Caltrans regarding this project, including construction coordination.

Response to Comment AS2-2

The comment is noted and continuous coordination with Caltrans will take place throughout the design process. Once the construction sequence is identified and construction activities are confirmed, a traffic management plan (TMP) will be developed showing potential lane closures and street detours. The TMP will be submitted to Caltrans staff for review and comment.

Response to Comment AS2-3

Appendix D, List of Draft EIS/EIR Recipients, of the Draft EIS/EIR has been revised in Appendix D of this Final EIS/EIR as shown below.

~~Garrett~~	~~Damrath~~	~~Senior Environmental Planner~~	~~California Department of Transportation~~	~~Draft EIS/EIR~~
~~Gary~~	~~Iverson~~	~~Senior Environmental Planner~~	~~California Department of Transportation~~	~~NOA~~
Brian	Manor	Associate Environmental Planner	California Department of Transportation	Draft EIS/EIR
Dawn	Kukla	Senior Environmental Planner	California Department of Transportation	NOA

Response to Comment AS2-4

Comment acknowledged. Metro will continue to provide Caltrans notice of any future meetings and will continue coordinating with Caltrans regarding this project.

Re: Draft Environmental Impact Statement/Report for the Regional Connector Transit Corridor Project

Dear Ms. Roybal Saltarelli:

Thank you for providing us with a copy of your Draft Environmental Impact Statement/Report (DEIS/R) for the Regional Connector Transit Corridor Project. The California Public utilities Commission (CPUC or Commission) has been interacting with the Los Angeles County Metropolitan Transportation Authority (Metro) regarding the project. The CPUC provided written comments to the Notice of Preparation for this project on May 11, 2009, and we appreciate the opportunity to provide the following additional comments: 1

The project is subject to a number of rules and regulations involving the CPUC. These may include: Sections 1201 et al, and 99152 of Sate of California Public Utilities Code, which requires Commission authority to construct rail lines over existing streets. The design criteria of the proposed project must comply with CPUC General Orders (GOs), such as, GO 72-B rules governing the construction and maintenance of crossings at grade of railroads with public streets, roads and highways; GO 75-D regulations governing standards for warning devices for at-grade highway-rail crossings; GO 143-B Safety Rules and Regulations governing Light-Rail Transit; and GO 164-D regulations governing State Safety Oversight of Rail Fixed Guideway Systems. 2

As part of its mission to reduce hazards associated with at-grade crossings, the Commission's policy is to reduce the number of at-grade crossings on rail corridors. 3

In acquiring Commission approval for construction of at-grade rail crossings, Expo Authority has two options: (1) Filing a Rail Hazards Analysis Report (RHAR), or (2) Filing formal applications in accordance with the Commission's Rules of Practice and Procedure. These options are contained in greater detail in Commission GO 164-D. 4

The Light Rail Transit Alternatives described in your DEIS/R pass through the high density downtown Los Angeles core. The heart of downtown's business and civic districts is comprised of a mixture of business, civic, commercial, retail, residential and industrial areas. High density areas near rail tracks lead to a high amount of pedestrians around the tracks. Constructing tracks at-grade is likely to result in trespassing issues and pedestrian conflicts similar to those currently experienced along other Metro Rail corridors in Los Angeles. Elevating or lowering the tracks would mitigate this concern. Additionally, fencing any remaining at-grade portions of the rail alignment selected should be a requirement of the project. 5

Commission staff favors the Fully Underground Light Rail Transit (LRT) Alternative which is the Metro staff-recommended Locally Preferred Alternative. This alternative proposes a complete underground Regional Connector with no street level crossings. Commission staff believes this alternative provides the utmost in safety by eliminating any possibility for LRT conflicts with vehicle or pedestrians. 6

The other 2 LRT Alternatives include segments proposed for street-running configurations. Street-running or center median configurations present more problematic interaction between vehicles and Light Rail Trains, usually resulting in vehicle-train collisions, such as have been experienced along the Metro Blue Line's Washington Boulevard segment and street-running segment in downtown Long Beach, and Metro's newly operational Gold Line Eastside extension. 7

While we understand the cost of grade separating a highway-rail at-grade crossing makes for a perceived detriment to your project, the CPUC normally does not take cost into its consideration of the practicability of grade separating a crossing. We understand that this is a highly complex and challenging project with funding, design and environmental approval for the downtown Los Angeles area. It is imperative that the CPUC be involved with the details of this project from its inception in order to be informed and to be of greater assistance in the future. 8

The CPUC will need to provide applicable regulatory oversight for all phases of the project. This will require early consultation with not only Metro staff but contracted consultants as well in order to provide early consultation on all proposed design and engineering of the proposed project improvements on the corridor. 9

This will assist with the review of the environmental documents and final CEQA approval of the project by the CPUC, since we are a responsible agency under CEQA section 15381 with regard to this project and in complying with any and all General Order requirements as they apply to the Regional Connector Transit Corridor Project. 10

Thank you very much for the opportunity to review and comment on your DEIS/R. Commission staff is available to meet with you and discuss our concerns.

We look forward to working with Metro on this project. Should you have any questions, please contact me at (213) 576 – 7083 or email at jose.pereyra@cpuc.ca.gov

Responses to Comments from the State of California – Public Utilities Commission, Pereyra, Jose

Response to Comment AS3-1

Comment acknowledged. Please refer to Responses to Comments AS3-2 through AS3-10, below, for detailed responses regarding concerns raised by the California Public Utilities Commission (CPUC).

Response to Comment AS3-2

Comment acknowledged. The Locally Preferred Alternative does not include any at-grade crossings. The Locally Preferred Alternative would be constructed in compliance with rules and regulations involving the CPUC.

Response to Comment AS3-3

Comment acknowledged. The Locally Preferred Alternative does not include any at-grade crossings and will be designed in accordance with the CPUC's policy to reduce the number of at-grade rail crossings on rail corridors.

Response to Comment AS3-4

Comment acknowledged. The Locally Preferred Alternative does not include any at-grade crossings and would not be required to file a Rail Hazards Analysis Report or formal applications regarding at-grade crossings.

Response to Comment AS3-5

Comment acknowledged. Concerns raised in this comment are associated with the At-Grade Emphasis LRT Alternative and were addressed in Section 4.15, Safety and Security, of the Draft EIS/EIR and this Final EIS/EIR. The Metro Board of Directors voted on October 28, 2010 to designate the Fully Underground LRT Alternative as the Locally Preferred Alternative. The Fully Underground LRT Alternative would result in the entire LRT facility being placed underground, eliminating all potential conflicts with at-grade roadway and pedestrian infrastructure. Therefore, the Locally Preferred Alternative and associated design would avoid potential safety effects related to both pedestrian and motorist crossings during operations.

Response to Comment AS3-6

Thank you for your comment. Support for the Fully Underground LRT Alternative is noted. The Metro Board of Directors voted on October 28, 2010 to designate the Fully Underground LRT Alternative as the Locally Preferred Alternative.

Response to Comment AS3-7

Street-running light rail introduces the possibility of problematic interaction between motor vehicles and trains. Metro designs its grade crossings to minimize the potential for collisions. No grade crossings would be constructed as part of the Locally Preferred Alternative.

Response to Comment AS3-8

Comment acknowledged. The Metro Board of Directors voted on October 28, 2010 to designate the Fully Underground LRT Alternative as the Locally Preferred Alternative. The Locally Preferred Alternative does not include any at-grade crossings. Metro will continue to coordinate with the CPUC regarding the Regional Connector project.

Response to Comment AS3-9

Comment acknowledged. Metro and contracted consultants will continue coordinating with CPUC during project design and engineering of the Locally Preferred Alternative.

Response to Comment AS3-10

Comment acknowledged. The Locally Preferred Alternative will be developed in compliance with all applicable CPUC General Order requirements.

By mail (to Delores Roybal Saltarelli) and e-mail

Sept. 13, 2010

Ms. Dolores Roybal Saltarelli
Project Manager, Metro
1 Gateway Plaza, MS 99-22-2
Los Angeles, CA 90012

Re: Wilcox Building (APN 5149007006)
Olender Building (APN 5149007005)

Dear Ms. Saltarelli:

This is to protest the proposed taking of the historic Wilcox Building, at 200-210 South Spring Street, and the Olender Building, at 212-218 S. Spring Street, as part of a possible Second Street underground rapid transit project. My wife, Jo-Ann W. Grace, and I are owners of those properties.

It is my understanding that an underground rail system is contemplated, with a subterranean depot placed in the area boarded by Broadway on the west, Second Street on the east, Spring Street on the north, and the Times parking structure on the south. Under the plan, our land at the southeast corner of Second and Spring Streets would be confiscated and the historic structures upon that land would be razed in order to provide parking for construction vehicles and equipment. The ultimate disposition intended to be made of our land (at a commercially desirable location) is not revealed. 1

I bring to your attention that information concerning the 1896 Wilcox Building, as well as the Olender Building, as contained in the "Regional Connector Transit Corridor Displacement and Relocation Technical Memorandum," is wholly inaccurate. The gross misimpressions generated by the report flaw it, necessitating that it be withdrawn—including its removal from the Internet—and reissued only after being corrected. In the course of making, and considering, the corrections, the infeasibility of the present proposal to raze our buildings and use the space for temporary parking should become manifest.

The report sets forth at Page 35, with respect to the Wilcox Building:

"This parcel is occupied by a commercial structure that includes five businesses. The businesses located

in this parcel include two restaurants, a cigar shop, a credit union, and the City Employees Club....[A taking] would result in no significant adverse impact related to job loss."

The businesses located in this parcel include *one* restaurant, a cigar shop, a credit union, and the City Employees Club. Not mentioned in the report is the primary occupant of the building, at 208-210 S. Spring Street: the Metropolitan News Company (owned by my wife and myself), which publishes eight California newspapers, including its flagship publication, the *Metropolitan News-Enterprise*, founded in 1901.

The company has its printing press in the basement. It would cost in the hundreds of thousands of dollars to move the press and, after being dissembled and jostled, it is likely that its functionality would be diminished. Locations where it would be possible to secure approval for installation of the press would be severely limited, in light of EPA requirements. Propinquity of the operations to the Civic Center is essential not only for news-gathering purposes, but the processing of legal notices at the Mosk Courthouse. Viable alternative sites might not exist. The present proposal is life-threatening to the company, thus to its newspapers, and to the jobs of its employees. (The report mentions a total of 40 persons being employed by all businesses in the building. The Metropolitan News Company, alone, employs a number greater than 40.)

Too, a building would be demolished that is part of the history of Los Angeles County. In the very space occupied by the Metropolitan News Company, there was from 1896-1914, the premier grocery store on the west coast, owned by Hans Jevne, a civic leader. Persons came by train from the various western states to stock up on goods, which were sent to them by rail. 1 cont'd

Among the original tenants were 13 lawyers, one of whom, Joseph Scott, is depicted in the form of a statue in front of the Mosk Courthouse, and another, Isidor Dockweiler, has a county beach named after him. Although the upper stories were removed in 1971 after an earthquake, the bottom floor, mezzanine, and basement remain. The credit union, in essence a bank, is in the very space occupied by the First National Bank of Los Angeles (which later became Security Pacific) from 1901 to Oct. 19, 1929.

Where cigars are now being sold, at 124 West Second Street, steam ship tickets were sold 114 years ago. The building was the home of the California Club, Southwestern University (now Southwestern Law School), and the law firm of Graves, O'Melveny & Shankland (now O'Melveny & Myers).

The Olender Building is likewise an historic Los Angeles structure (and is not vacant).

The MTA knows that 208-210 S. Spring Street is occupied by a newspaper publishing company, *not a restaurant*. Two meetings were held with the MTA staff—on March 23, 2010, and April 28, 2010. My wife, Jo-Ann Grace, represented herself and me, as owners of the property, and represented the Metropolitan News Company, of which she is president, with the company also being represented by Vahn C. Babigian, our general manager.

You subsequently advised my wife that our needs and concerns are appreciated and would be accommodated.

Yet, the report, dated March 19, 2010, and released on Sept. 3, includes as an alternative the confiscation of our buildings, with no acknowledgment that a newspaper publishing company, and its printing press, are on the premises; that one of the newspapers was established in 1901; and that the buildings—which are not even lent the dignity of their names being reflected—have enormous historic value. (The names of the buildings were made known to the MTA at the meetings.)

Parking space is available for vehicles and equipment without raising multi-million dollar structures. There are parking lots close by. It might even be possible to lease space in them, rather than using powers of condemnation. There exist:

-— A multi-level public parking lot on Spring Street, immediately to the south of our buildings (east side), with additional street-level parking south of there, to the end of the block, with some parking in a lot across the street (west side of Spring Street, extending to Broadway).
--— --Massive public lots behind our buildings (east of them, extending south of them), across from the LAPD parking on Main Street.
-— A block-long parking lot south of the Kyoto Grand Hotel, on Second Street, bounded by Los Angeles Street on the West and San Pedro on the east.
-— An empty, excavated lot between Second and First Streets, bounded on the east by Broadway and the west by Hill Street.

1
cont'd

There is a vague allusion in the "Displacement and Relocation Technical Memorandum" to the *possibility* of "optional station entrances locations" on our property. To demolish historic buildings on the mere chance that someone would later decide to put an escalator there to an underground depot defies reason. Access could be gained from the lawn of the new LAPD Building, the vacant lot at the northwest corner of Second and Broadway, from the bottom floor of the Los Angeles Times' multi-story parking lot, or from our site through a minimal *partial* taking or leasehold.

It truly does not make sense to raze historic structures when land devoid of structures is located nearby —and, with respect to the vacant land at Second and Broadway, is as close to the site of the proposed depot (Second Street between Broadway and Spring Street) as we are.

With respect to a possible transit system that is above-ground, the closing of Second Street to traffic would preclude the delivery to our premises of newsprint. Delivery is made at the rear of our building from Harlem Place which, though officially a street, has the appearance of an alley. It's one-way, with entry on Third Street and exiting on Second. A truck carrying such loads could not back up for an entire block to Third Street. Without newsprint, a newspaper cannot be printed.

As a first step, I ask that the "Regional Connector Transit Corridor Displacement and Relocation Technical Memorandum" be withdrawn, and that it be redrafted, with attention lent to the matters discussed above. I would hope that in light of these considerations, an alternative location be chosen for an area on which to park vehicles and equipment.

Yours truly,

Roger M. Grace
RMG/mt

Responses to Comments from Metropolitan News Enterprise, Grace, Roger M.

Response to Comment BU1-1

The Metro Board of Directors voted on October 28, 2010 to remove the Wilcox and Olender Buildings (APNs 5149-007-006 and 5149-007-005) from consideration as acquisitions for the Regional Connector project. Only a subsurface easement beneath APN 5149-007-006 would be required for construction of the Locally Preferred Alternative.

Los Angeles County Metropolitan Transit Authority
Delores Roybal Saltarelli, Project Manager
One Gateway Plaza, 99-22-2
Los Angeles, CA 90012

Dear Ms. Roybal Saltarelli,

I originally planned to send the prepared letter in support of the LTBA/LTBID position regarding the Regional Connector Transit Corridor Project. However, on second thought I am writing in support of a **no build** option. I respect the LTBA/LTBID's position and their responsibility to the Little Tokyo Community, but I would like to communicate my concern that many of our family-owned businesses may not survive this project. I own a business that has been in my family for over 65 years, and I am barely hanging on due to the bad economy. Business is down 40% from where we were in the 1990s, and a further hit would be the end for us. The threat to businesses that will be displaced from the project is already having a negative effect, and the impact on traffic, parking, and detritus from the construction stretched over years will be overwhelming to area businesses. 1

Is it too much to ask, after all the work that has already been done to leave things the way they are? Perhaps, but that's my vote.

Thanks for this opportunity to give my opinion.

Sincerely,

BU3

Responses to Comments from Bunkado, Inc., Simonian, Irene Tsukada

Response to Comment BU3-1

Metro acknowledges the impacts that Regional Connector construction would have in Little Tokyo, and addresses them in the Mitigation Monitoring and Reporting Program for the Locally Preferred Alternative (Chapter 8) of this Final EIS/EIR. Metro has been working closely with the Little Tokyo community since the outset of the Alternatives Analysis process in October 2007. Metro staff have performed extensive outreach measures, as documented in Chapter 7, Public and Agency Outreach, of the Draft EIS/EIR and this Final EIS/EIR, including numerous public meetings, Japanese and Korean language interpretations, and door-to-door visits with business owners to provide information about the project and gather input. Metro will enact the measures listed in the Mitigation Monitoring and Reporting Program for the Locally Preferred Alternative to minimize impacts to businesses, and will coordinate activities with the community throughout the construction process. Construction activities in the Little Tokyo area would consist of cut and cover activities in the vicinity of the new underground station, the new portals, the junction beneath 1st and Alameda Streets, and a portion of Central Avenue between 1st and 2nd Streets. Refinements made to the Locally Preferred Alternative would reduce the extent of cut and cover activities and associated street lane and sidewalk closures. Activities at these locations could be performed simultaneously to minimize the overall duration of the construction process. Tunnel boring machine activities would be staged at the Mangrove property for a period of two to four years, and would not cause impacts anywhere else in the Little Tokyo community.

Support for the No Build Alternative is noted. The Metro Board of Directors voted on October 28, 2010 to designate the Fully Underground LRT Alternative as the Locally Preferred Alternative.

RE: Comments on Draft EIS/EIR for Regional Connector

Dear Ms. Roybal-Saltarelli:

As a member of The Little Tokyo Community Council (LTCC), we appreciate the opportunity to comment on the Draft EIS/EIR for the proposed Regional Connector. The positive working relationship and open dialogue have helped the community actively participate in the process to date. We offer the following general comments, which are followed by specific comments on the EIS/EIR: 1

1. The LTCC strongly believes that the Fully Underground alternative is the only acceptable option as the Locally Preferred Alternative that addresses its concerns about the environmental, economic, social, and cultural impacts to the community. As such, it supports Metro's finding that "the Draft EIS/EIR does designate the Fully Underground LRT Alternative...as a staff recommended Preferred Alternative based on the technical analysis...and input received from the community." We concur that the Fully Underground Alternative "was developed to best address community concerns simultaneous with cost, operational, and design concerns." Further, the analysis in the EIS/EIR shows it is clearly the best performing alternative from a ridership, travel time savings, environmental, noise, safety, cost-effectiveness, and social impact perspective. It is also nearly the cheapest alternative to operate and maintain over time. Please note that our support for the Fully Underground alternative is contingent on satisfactory acceptance of LTCC's proposed mitigation measures identified on April 27, 2010. The other alternatives pose significant, disproportionate impacts on Little Tokyo that are unacceptable. 2

2. The EIS/EIR should correct its assessment of the impacts of the At-Grade Emphasis and Underground Emphasis alternatives. The draft understates the environmental impacts on the Little Tokyo community of the grade separations required along Alameda Street that would physically bisect the Little Tokyo community, potential impacts if tunnel boring were to be initiated from 2nd/Central, and the aesthetic impacts associated with at-grade LRT operations through our community. As such, these two alternatives would 3

place disproportionate burdens on a minority community in the areas of Transit Service Equity Deterioration and Community and Neighborhood Impacts. 3 cont'd

3. In its letter to Metro dated April 27, 2010, the LTCC strongly urged Metro to initiate tunnel boring activities from 2nd/Flower/Hope to minimize construction impacts on the Little Tokyo community. If Metro cannot commit to initiate TBM activities at 2nd/Flower/Hope until Preliminary Engineering is complete, the EIS/EIR should more clearly distinguish the extent and duration of construction impacts that could affect Little Tokyo if boring begins at 2nd/Central. This information is critical to determining whether the community will endure disproportionate impacts during construction activities. 4

4. While many mitigation measures are identified throughout the document, the recommendations from the LTCC are segregated as a package of candidate measures to be considered by Metro and FTA. Please confirm the process for approving mitigation measure recommendations and whether this differs from mitigation measures cited elsewhere in the document. 5

5. The LTCC calls for Metro to formalize an agreement with the Little Tokyo community that provides us with a substantial role in decision-making during the Preliminary Engineering, Final Design, and construction phases that addresses: 6

    a. Little Tokyo's formal involvement in the development and approval of mitigation measures for the Little Tokyo community,
    b. Little Tokyo's formal involvement in the monitoring of mitigation measures through the Mitigation Monitoring Plan,
    c. How to provide a sufficient safety net for Little Tokyo businesses that will be affected during construction,
    d. Redevelopment of the Office Depot block.

6. The Draft EIS/EIR does not reflect the language adopted by the LTCC on May 25, 2010 that included refinements to its comments on the pending environmental analysis. These changes stem from additional comments from the Little Tokyo community in late April and amend comments that were transmitted to Metro in our letter dated April 27, 2010: 7

    a. Expand the safety net for Little Tokyo businesses that will be affected during construction. This must include having Metro provide additional financial and other resources to the community and/or businesses to provide more targeted marketing, as well as financial compensation to local businesses for any loss in gross sales. The process for establishing eligibility, quantifying financial assistance or compensation, and related details would be established jointly between Metro and Little Tokyo stakeholders. 8
    b. Metro shall work with the Little Tokyo community businesses to ensure no adverse impacts to business operations prior to relocation of or protection of in-place utilities and during construction activities. The LTCC and Metro shall consider establishing a Business Interruption Committee that will streamline Metro's communication with the community, avoid adverse business interruptions, and ensure rapid resolution of unforeseen problems. This committee shall include local businesses and property owners. 9

Thank you for your consideration. We look forward to continuing to work with Metro to address appropriate mitigation measures that will address our community's concerns. 10

Sincerely,

Peggy T. Mikuni, President
Yamato Travel Bureau

Encl. Detailed comments on Draft EIS/EIR

Little Tokyo Community Council
Detailed Comments

Executive Summary

7. The LTCC supports the statement that "the Draft EIS/EIR does designate the Fully Underground LRT Alternative...as a staff recommended Preferred Alternative based on the technical analysis...and input received from the community" (Page ES-5). We concur that it "was developed to best address community concerns simultaneous with cost, operational, and design concerns." Further, the analysis the EIS/EIR shows it is clearly the best performing alternative from a ridership, travel time savings, environmental, and social impact perspective. From the Little Tokyo community perspective, it is the only alternative that adequately addresses our concerns about environmental, economic, social, and cultural impacts to the community. The other alternatives pose significant disproportionate impacts on Little Tokyo.
8. The EIS/EIR incorrectly characterizes the impacts of the At-Grade analysis by understating its environmental impacts on the Little Tokyo community. Specifically, the project would place disproportionate burdens on a minority community in the areas of:
    a. Transit Service Equity Deterioration
    b. Community and Neighborhood Impacts.
9. The EIS/EIR incorrectly concludes that there would not be any significant unavoidable environmental justice impacts for the At-Grade Emphasis alternative. The EIS/EIR should conclude that the impacts are significant for two reasons:
    a. The grade separation of a vehicle underpass and pedestrian overpass at Temple and Alameda to route traffic under the rail tracks would physically divide Little Tokyo along Alameda. This would significant affect the cultural integrity of the community by separating the many temples and residents east of Temple from the core of Little Tokyo. The pedestrian overpass would be a significant barrier to elderly residents who travel east-west across Alameda.
    b. The grade separation plan is comparable to the Underground Emphasis alternative, which was found to have significant "Community and Neighborhood" impacts. The EIS/EIR should be revised to be consistent with this finding for the At-Grade emphasis alternative.

11

Chapter 1 (Purpose and Need)

10. The Draft EIS/EIR fails to acknowledge the existence of Little Tokyo in Section 1.4.2 (Project Area Ethnicity). Given its status as one of only three Japantowns in the nation and the environmental justice concerns that are important to Metro, Little Tokyo should be mentioned in the Purpose and Need chapter.

Chapter 2 (Alternatives Considered)

11. Page 2-21, Section 2.3.4.4. The analysis of pedestrian circulation impacts at Temple and Alameda Street from the At-Grade Emphasis alternative fails to adequately describe

likely impacts. The construction of a pedestrian overpass to "minimize delays (of rail service) at the intersection of Temple and Alameda" comes at the expense of increasing travel time for pedestrians that must navigate the overpass to cross Alameda. Given the significant concentrations of elderly residents and merchants in the area, this will pose a significant impact on pedestrian circulation, particularly from temples and residences east of Alameda to the heart of Little Tokyo that lies west of Alameda. This represents a disproportionate impact on local residents and pedestrian circulation to accommodate reduced travel time for the regional Metro Rail system. The EIS/EIR should be revised to accurately portray the impact of pedestrian circulation.

12. Page 2-31, Section 2.3.6.4. The EIS/EIR understates the impact of the Underground Emphasis alternative on pedestrian circulation at Alameda Street by stating it will "require relatively small changes to surface traffic and pedestrian circulation patterns." The construction of a pedestrian overpass at 1st and Alameda comes at the expense of increasing travel time for pedestrians that must navigate the overpass to cross Alameda. Given the significant concentrations of elderly residents and merchants in the area, this will pose a significant impact on pedestrian circulation, particularly from temples and residences east of Alameda to the heart of Little Tokyo that lies west of Alameda. This represents a disproportionate impact on local residents and pedestrian circulation to accommodate reduced travel time for the regional Metro Rail system. The EIS/EIR should be revised to accurately portray the impact of pedestrian circulation.
13. Page 2-34, Section 2.4.5. The EIS/EIR remains silent on whether tunneling would involve single boring followed by a reverse boring in the other direction, use of two TBMs concurrently, or use of a single, wider boring. It is assumed that the EIS/EIR assumes the boring approach that would result in a worst-case scenario for construction impacts.
14. Page 2-38, Figure 2-13. The EIS/EIR depicts the block between 1st, 2nd, Central, and Alameda as being the site for an open cut. However, Metro has indicated that the existing development on the east side of Central between 1st and 2nd may be spared from demolition during construction. Given the orientation of any subway alignment under the property, every effort should be made to avoid demolishing existing buildings that front on 1st Street, including the former Café Cuba restaurant, Weiland's Brewery, and other nearby buildings.

11 cont'd

Chapter 3 (Transportation Impacts and Mitigation)

15. Page 3-4, Section 3.1.3. The EIS/EIR should clarify that the assessment of parking impacts also considers off-street parking spaces that would be affected by the construction or operation of the project. Chapter 4 in fact accounts for off-street parking.

16. Page 3-4, Section 3.1.4. The determination of significance for pedestrian circulation should be clarified to include detours that might lengthen bicycle commutes or pedestrian routes or travel time..."

17. Section 3.2.2.1, Table 3-9. Please confirm the existing LOS B and C at Alameda/1st Street in the morning and evening peaks, respectively. These don't correspond with empirical observations. If these are correct, please note that this is due in large part to the closure of westbound lanes over the Los Angeles River.

18. Page 3-8, Table 3-3. The overview of ridership on bus lines servicing the project area omits LADOT Commuter Express 438, DASH, and possibly other LADOT lines. If Table 3-3 is intended to exclusively identify Metro lines, it should be labeled as such.

19. Page 3-17, Section 3.2.3. As noted earlier, any assessment of existing parking conditions in the study area must include an inventory of any parking facilities that would be affected by the proposed construction or operation of the project. This includes off-street spaces on the block bounded by 1st, 2nd, Central, and Alameda. Chapter 4 in fact accounts for off-street parking.

20. Page 3-37, Section 3.3.3.2. As noted earlier, the operation of an At-Grade Emphasis LRT system would require construction of a pedestrian overpass at Temple and Alameda that would impact the length and travel time for pedestrian travel. Given the high concentration of elderly residents in Little Tokyo, this impact on travel times would be even greater. This impact should be considered significant.

21. Section 3.3.3.2.2, Figure 3-7. Please explain how the intersection of Alameda/1st Street improves over existing conditions in the year 2035. This "beneficial change in LOS" is counterintuitive given the extent of growth projected in the study area through 2035.

22. Section 3.3.4.2.2, Figure 3-9. Please explain how the intersection of Alameda/1st Street improves over existing conditions in the year 2035. This "beneficial change in LOS" is counterintuitive given the extent of growth projected in the study area through 2035.

23. Section 3.3.4.2.2. Although this section concludes that the alternative would have a significant impact because of the seven intersections that would be impacted, the analysis needs to analyze and discuss the impact that the creation of the portal and the at-grade alignment to access the station at Alameda/1st. This is a huge impact on the area and should be discussed in terms of the operational impact this configuration has on the local street system. The actual impacted intersections in terms of LOS is minor in comparison to this potential impact. It must be evaluated in terms of operations, safety, access, etc., not just LOS.

11 cont'd

24. Page 3-43, Section 3.3.4.2.3. In the analysis of the Underground Emphasis, the EIS/EIR fails to account for the demolition of off-street parking spaces on the block bounded by 1st, 2nd, Central, and Alameda. Removal of these spaces will likely have an impact on existing and proposed parking in Little Tokyo and should be analyzed. Chapter 4 in fact accounts for off-street parking.

25. Page 3-44, Section 3.3.4.2.4. The operation of an Underground Emphasis LRT system would require construction of a pedestrian overpass at 1st and Alameda that would impact the length and travel time for pedestrian travel. Given the high concentration of elderly residents in Little Tokyo, this impact on travel times would be even greater. This impact should be considered significant.

26. Page 3-47, Section 3.3.5.1.1. The EIS/EIR should clarify whether construction of the Fully Underground alternative would require temporary closure of lanes on 2nd Street and Central for relocation of utilities and cut-and-cover activities. The Draft does not indicate closure will be needed on these two streets.

27. Page 3-48, Section 3.3.5.1.2. The EIS/EIR remains silent about where tunnel boring activities would be initiated, stating that "[r]outes and disposal sites will be confirmed during the preliminary engineering phase..." If Metro cannot confirm that tunnel boring will not be initiated from Little Tokyo, the EIS/EIR should assume a worst-case scenario of impacts for Little Tokyo so that the full extent of traffic impacts, including dirt hauling operations, during construction is understood.

28. Page 3-49, Section 3.3.5.1.3. In the analysis of the Fully Underground alternative, the EIS/EIR fails to account for the demolition of off-street parking spaces on the block bounded by 1st, 2nd, Central, and Alameda during construction. Removal of these spaces will likely have an impact on existing and proposed parking in Little Tokyo and should be analyzed.

29. Page 3-50, Section 3.3.5.2.2, Figure 3-11. Please explain how the intersection of Alameda/1st Street improves over existing conditions in the year 2035. This "beneficial change in LOS" is counterintuitive given the extent of growth projected in the study area through 2035.

30. Page 3-51, Section 3.3.5.2.2. Please explain how the intersection of Alameda/1st Street improves over existing conditions in the year 2035. This "beneficial change in LOS" is counterintuitive given the extent of growth projected in the study area through 2035.

31. Page 3-51, Section 3.3.5.2.2. It should be noted that there are only three impacted intersections from this alternative, none of them in Little Tokyo. From the LTCC's perspective, this alternative has no impacts on Little Tokyo.

11 cont'd

32. Page 3-51, Section 3.3.5.2.3. In the analysis of the Fully Underground alternative, the EIS/EIR fails to account for the demolition of off-street parking spaces on the block bounded by 1st, 2nd, Central, and Alameda during operations. Removal of these spaces will likely have an impact on existing and proposed parking in Little Tokyo and should be analyzed. Chapter 4 in fact accounts for off-street parking.

33. Section 3.4.1.3. The analysis of parking and mitigation measures is too qualitative and conceptual to accurately gauge project impacts. There needs to be a much more detailed description of at least the mitigation options that should be considered for this program. The EIS/EIR should be more quantitative in the parking analysis, with the locations and the type of users for the various types of parking provided, both for the interim during construction and for the permanent during operation of the system. It is impossible to evaluate the parking program that does not discuss any of these items

Chapter 4 (Environmental Analysis, Consequences, and Mitigation)

34. Page 4-23, Section 4.2.3.4.3. LTCC agrees that the removal of off-street parking spaces from the Underground Emphasis alternative could be an "adverse effect with respect to environmental justice" if impacts are not fully mitigated.

35. Page 4-30, Section 4.2.4.4. While the issue of loading spaces at JANM is discussed in Chapter 3, the issue should be cited again in the displacement discussion, with appropriate mitigation included in this section.

36. Page 4-42, Section 4.3.2.4.6. The EIS/EIR should note that the Little Tokyo community exists on both the west and east sides of Alameda Street.

37. Page 4-43, Table 4.3-4. The overview of impacts to community and neighborhoods should be revised to reflect:

    a. The At-Grade Emphasis LRT can physically divide the Little Tokyo community because of the physical operation of LRT trains along surface streets that visually bisect these thoroughfares and because of the physical grade separation at Temple and Alameda that will create physical barriers to cross Alameda Street by walking or bicycling.
    b. The Underground Emphasis LRT can physically divide the Little Tokyo community because of the physical grade separation at 1st and Alameda that will create physical barriers to cross Alameda Street by walking or bicycling.
    c. The At-Grade Emphasis LRT can significant impair community mobility in Little Tokyo through the physical grade separation at Temple and Alameda that will create physical barriers to cross Alameda Street by walking or bicycling.
    d. The Underground Emphasis LRT can significant impair community mobility in Little Tokyo because of the physical grade separation at 1st and Alameda that will create physical barriers to cross Alameda Street by walking or bicycling.

38. Page 4-45, Section 4.3.3.4. While the EIS/EIR does not commit the project to initiate TBM activities at a particular location, it does confirm that construction impacts would be more significant in the Financial District and Little Tokyo. Please distinguish the extent of community and neighborhood impacts in Little Tokyo from dirt hauling and other operations if: a) TBM begins at 2nd/Central or near Bunker Hill.

11 cont'd

39. Page 4-311, Section 4.17.5. The Draft EIS/EIR does not reflect the language adopted by the Little Tokyo Community Council (LTCC) on May 25, 2010 that included refinements to its comments on the pending environmental analysis. These changes stem from additional comments from the Little Tokyo community in late April and amend comments that were transmitted to Metro in our letter dated April 27, 2010. The approved changes are shown below in underline.
    c. Expand the safety net for Little Tokyo businesses that will be affected during construction. This must include having Metro provide additional financial and other resources to the community and/or businesses to provide more targeted marketing, as well as financial compensation to local businesses for any loss in gross sales. The process for establishing eligibility, quantifying financial assistance or compensation, and related details would be established jointly between Metro and Little Tokyo stakeholders.
    d. Metro shall work with the Little Tokyo community businesses to ensure no adverse impacts to business operations prior to relocation of or protection of in-place utilities and during construction activities. The LTCC and Metro shall consider establishing a Business Interruption Committee that will streamline Metro's communication with the community and avoid adverse business interruptions. This committee shall include local businesses and property owners.

40. Page 4-311, Section 4.17.5. Please add the following mitigation measure to the list of options suggested by the LTCC for inclusion in the Final EIS/EIR:

a. Provide free business support technical assistance to local businesses on strategies for business development that can minimize any adverse impacts of construction. This can include, but not be limited to, assistance with marketing, accounting, or finance.

41. Page 4-311, Section 4.17.5. While many mitigation measures are identified throughout the document, the recommendations from the LTCC are segregated as a package of candidate measures to be considered by Metro and FTA. Please confirm the process for approving mitigation measure recommendations and whether this differs from mitigation measures cited elsewhere in the document.

Chapter 6 (Cost and Performance Considerations)

42. Please note that the capital costs of the Fully Underground alternative include all stations originally considered in the initial evaluations. Any efforts to reduce capital costs for this alternative should focus on opportunities for open cut stations, as well as eliminating any of the three stations to the west, including Flower Street between 4th and 5th, not on any changes to the fully underground system design at the proposed Little Tokyo station.

11 cont'd

43. LTCC concurs with the EIS/EIR's finding that the operating and maintenance costs for the Fully Underground alternative are lower than the TSM and At-Grade Emphasis alternatives.

44. Page 6-19, Table 6-15. The overview of the mobility benefits of each alternative clearly confirm that the Fully Underground alternative provides the most benefit in reducing congestion countywide.

45. Page 6-21, Table 6-16. The assessment of transit system user benefits for all alternatives confirms that the Fully Underground alternative provides the most "bang for the buck" and will be most competitive in Metro's pursuit of Federal Transit Administration New Starts funding.

46. Page 6-22, Section 6.6.1. The description of the evaluation methodology should acknowledge the importance of providing proportional benefits to local communities like Little Tokyo that are affected by construction to benefit the regional transit system.

Chapter 7 (Public Agency Outreach)

47. Page 7-7. In the list of stakeholders consulted, please add the Little Tokyo Community Council under Community Organizations, Neighborhood Groups, and Homeowner Associations.

48. Page 7-21. Please note that the LTCC's PCPC is the Planning and Cultural Preservation Committee.

BU4

Responses to Comments from Yamada Travel Bureau, Mikuni, Peggy T.

Response to Comment BU4-1

Thank you. Comment acknowledged. Please refer to Responses to Comments BU4-2 through BU4-11, below, for detailed responses regarding concerns raised by the commenter.

Response to Comment BU4-2

Support for the Fully Underground LRT Alternative and the Little Tokyo Community Council proposed mitigation measures is noted. The Metro Board of Directors voted on October 28, 2010 to designate the Fully Underground LRT Alternative as the Locally Preferred Alternative.

Response to Comment BU4-3

The impacts of the proposed pedestrian bridge and roadway underpass in Little Tokyo were discussed in Sections 4.17.3.3.2 and 4.17.3.4.2 of the Draft EIS/EIR and this Final EIS/EIR, respectively. The potential impacts of beginning tunnel boring machine operations at 2nd and Central were described in Section 4.18.3.4 of the Draft EIS/EIR. Impacts were adequately analyzed in the Draft EIS/EIR. Disproportionate impacts on the Little Tokyo community were analyzed in Section 4.17, Environmental Justice, of the Draft EIS/EIR and this Final EIS/EIR. The Metro Board of Directors voted on October 28, 2010 to designate the Fully Underground LRT Alternative as the Locally Preferred Alternative. The refined Locally Preferred Alternative would not involve construction of any pedestrian bridges or roadway underpasses in Little Tokyo, and would not involve starting tunnel boring machine operations at 2nd and Central. Tunnel boring machine operations would instead begin at the Mangrove property, which is farther from the center of Little Tokyo and would involve fewer impacts.

Response to Comment BU4-4

Comment acknowledged. As indicated in Section 4.18, Construction Impacts, of the Draft EIS/EIR and this Final EIS/EIR, a range of durations, 2-4 months for the TBM insertion site and 24-48 months for the 2nd Street TBM tunnel, was assumed for tunneling activities at both insertion site options. These ranges are conservative estimates. Disproportionate impacts associated with each alternative were discussed in Section 4.17, Environmental Justice, of the Draft EIS/EIR and this Final EIS/EIR.

The small size of the 2nd/Hope Street station site would require a substantial portion of construction staging activities to occur in the surrounding streets, necessitating longer downtown street closures and increased cut and cover activities. This would have the effect of reducing mobility downtown and could deter visitors from frequenting many downtown communities, including Little Tokyo. In addition, the 1st/Central Avenue station site in Little Tokyo would need to be used as the TBM receiving site if the tunnel boring machines are inserted at the 2nd/Hope Street station site.

Based on comments received on the Draft EIS/EIR and input received from community meetings held during preparation of this Final EIS/EIR, the TBM insertion site options at 2nd/Central Avenue station and the 2nd/Hope Street station are no longer being considered. Instead the vacant property at the northeast corner of 1st and Alameda Streets, formerly known as the Mangrove Site, would be used as the insertion site. The TBM would be inserted

approximately 700 feet from the originally proposed 2nd/Central Avenue insertion area, which would reduce the intensity of construction on the block bounded by 1st Street, Central Avenue, 2nd Street, and Alameda Street and result in fewer acquisitions. Tunnel boring activities from this site would proceed farther down Flower Street to 4th Street, instead of ending at the proposed 2nd/Hope Street station. Spoils would be removed within the Mangrove property, and trucks would be routed to the east and/or north to reach the freeway, and would not pass through Little Tokyo. Section 4.18, Construction Impacts, of this Final EIS/EIR contains further detail regarding estimated construction durations, construction scenarios, and tunnel boring operations at the Mangrove property. Chapter 3, Transportation Impacts and Mitigation, and Chapter 4, Environmental Analysis, Consequences, and Mitigation, of the Draft EIS/EIR have been revised based on the new TBM insertion site in this Final EIS/EIR. A portion of the Mangrove property was identified for construction staging in the Draft EIS/EIR. Inserting the TBM at the Mangrove property would not result in new significant impacts or substantially increase the severity of impacts previously identified in the Draft EIS/EIR.

Worksite Traffic Control Plans will be developed in coordination with the Los Angeles Department of Transportation and presented to the community prior to construction activities. Metro will provide the community with updates regarding the construction schedule prior to and during construction.

Response to Comment BU4-5

The mitigation measure recommendations were segregated in the Draft EIS/EIR because they are a distinct part of the environmental justice outreach process. Like all other appropriate mitigation measures in the Draft EIS/EIR, feasible measures from the Little Tokyo Working Group recommendations have been incorporated into the Mitigation Monitoring and Reporting Program for the Locally Preferred Alternative (Chapter 8). The Mitigation Monitoring and Reporting Program for the Locally Preferred Alternative, Chapter 8, contains final mitigation measures for the Locally Preferred Alternative; the Mitigation Monitoring and Reporting Program will be approved by the Metro Board of Directors upon certification of this Final EIS/EIR. These mitigation measures will also be included in a Record of Decision subsequently issued by the Federal Transit Administration (FTA). Metro will formally commit to implement all mitigation measures in the Mitigation Monitoring and Reporting Program for the Locally Preferred Alternative upon certification of this Final EIS/EIR and issuance of the Record of Decision by FTA.

Response to Comment BU4-6

Metro intends to undertake all of the listed activities. The Mitigation Monitoring and Reporting Program for the Locally Preferred Alternative (Chapter 8) of this Final EIS/EIR and Record of Decision to be issued by FTA are the formalized commitments to implement mitigation measures. Metro will involve the community throughout the project process. Based on the refinements to the Locally Preferred Alternative, only the northern portion of the block bounded by 1st Street, Central Avenue, 2nd Street, and Alameda Street would need to be acquired as part of the Locally Preferred Alternative for the 1st/Central Avenue station site. The Señor Fish, Weiland Brewery, associated parking, and the former Café Cuba (The Spice Table) would still need to be displaced. However, the remaining businesses on that block would remain, including the Office Depot and associated parking.

Response to Comment BU4-7

The text of these mitigation measures has been documented in Section 4.17.4.2 of this Final EIS/EIR. Metro will implement all feasible mitigation measures as part of the Mitigation Monitoring and Reporting Program for the Locally Preferred Alternative (Chapter 8) of this Final EIS/EIR.

Response to Comment BU4-8

This mitigation measure has been recorded in Section 4.17.4.2 of this Final EIS/EIR as one of the mitigation measures suggested by the Little Tokyo community. Metro has identified measures in the Mitigation Monitoring and Reporting Program for the Locally Preferred Alternative (Chapter 8) of this Final EIS/EIR that will provide support for the Little Tokyo businesses. This could take the form of in-kind advertising, Metro-sponsored coupons, city-wide advertising that Little Tokyo is open for business during construction, and similar supportive measures.

Response to Comment BU4-9

It is Metro's goal to minimize adverse impacts to the Little Tokyo community, including impacts to businesses. Metro will implement the mitigation measures proposed by the Little Tokyo Community Council and Little Tokyo Business Improvement District/Little Tokyo Business Association regarding business interruption shown in the Mitigation Monitoring and Reporting Program (Chapter 8) of this Final EIS/EIR. Metro will work with the Regional Connector Community Leadership Council to serve all businesses affected by Regional Connector construction.

Response to Comment BU4-10

Metro also looks forward to continuing work with the community throughout the project process, including implementation of the Mitigation Monitoring and Reporting Program for the Locally Preferred Alternative (Chapter 8) of this Final EIS/EIR.

Response to Comment BU4-11

Comments acknowledged. These comments are a copy of the detailed comments submitted by the Little Tokyo Community Council (Comment Letter CN1). Please refer to Responses to Comments CN1-11 through CN1-57, below.

To: Ms. Dolores Roybal Saltarelli Oct. 12、2010
Project Manager
Metro
One Gateway Plaza,MS 99-22-2
Los Angeles, CA 90012

From: Hiroshi Yamauchi/Koraku Group Inc.
Board Member of LTBA,LTBID
314 E. 2nd St.
Los Angeles, CA 90012
Cel 310-890-1792、hiroyama1us@yahoo.co.jp

Dear Dolores,

Metro Regional Connector のLittle Tokyo での建設計画について手紙を書きます。
私どもLittle TokyoのBusiness OwnerのGroupは、ただいま有力な案の２nd St.を通る「Fully Underground Alternative」に反対します。 従って、「No Build」案を支持します。

はじめは、私どももこの「Fully Underground Alternative」は、我々Little Tokyoの関係者にとって全くImpactのない、いつも通りBusinessが継続できる、いい案だと思っていましたが、MeetingやHearingを重ねていくうちに、非常にImpactの大きい大変な計画だと知りました。
この案に賛成の方の中には、工事関係者やProperty Ownerの方達の様にご自身の利益につながる方もいらっしゃるでしょう。でもこの方達はこの計画が中止になったとしても、生活が奪われる訳ではありません。 私どもは、この4年間の工事中にBusinessが続けられなくなって生活自体が覚束なくなる可能性があります。一部の方達の利益の為に我々が犠牲になるのは、許す事のできない耐え難い屈辱です。 それでも、あるProperty Ownerの方は、「目先の利益より、犠牲のない皆さんの繁栄こそが将来の本当の利益につながるんです。」と、我々に賛同してくれている方もいます。

将来の環境問題については、我々も無関心ではありません。温暖化現象対策やCO2削減などはいますぐ手を打たなければなりません。これは一人一人の生活のなかで心掛けなければならないことです。それを目的とした公共工事も必要でしょう。しかしその為に人の生活が 犠牲になる様では、「本末転倒」と言うべきでしょう。

犠牲にならない様に「補償」はすると言っても、その「補償」の「保証」はありません。　その不安を払拭する前に、この工事の賛成は到底できません。　その為にも、他の案をもう一度研究し検討して頂きたい。

例えば、

1、　Red　Lineを共用する。（新たな地下鉄工事の資金で、改良する。一時的に不通になってもShuttle　Busで対応する。新たな工事と同じ効果が期待できる。）
2、　Moca　の裏の地下に駅を造ってTemple　St.の下を通す。
3、　３rd　St.か４th　St.の地下を通す。

いかがなものでしょうか、是非この提案に対してのお答えを頂きたいと思います。

Little Tokyo は我々日本人、日系人にとって非常に大事な心の拠りどころです。いや今や、全米の若者達の日本文化の聖地と言っても過言ではありません。　この歴史的にも重要な場所をどうか守ってください。　我々の中には、すでに不安で不安でたまらなく、夜も碌に眠れない人がでて居ます。この数字には表れない、ダメージをどうして補償してくれるのでしょうか。

私どもは決して、この地下鉄工事に反対している訳ではありません。「Fully Underground　Alternative」が2nd St.を通る案に反対をしているのです。この「Fully Underground　Alternative」を2nd St. ではなく、どうか他の通り、他の方法でもう一度検討をして頂きたい。

この我々の切実な想いをどうか汲み取って頂き、誰もが、幸福になる結果を願います。

お返事をお待ちしております。

Hiroshi Yamauchi

Koraku Group Inc.

October 17, 2010

To: Ms. Dolores Roybal Saltarelli
Project Manager
Metro
One Gateway Plaza, MS99-22-2
Los Angeles, CA 90012

From: Hiroshi Yamauchi / Koraku Group Inc.
Board Member of LTBA, LTBID
314 E. 2nd St.
Los Angeles, CA 90012
Cell: 310-890-1792, Hiroyama1us@yahoo.co.jp

Dear Dolores:

I am writing to you to discuss about the construction plan of Metro Regional Connector in Little Tokyo area.
We, the Business Owner Group of Little Tokyo area, would like to express the objection against the plan of Fully Underground Alternative, which takes a route along the 2nd street. Instead, we will support the plan of No Build. 1

Initially, we had no objection against the plan of Fully Underground Alternative, because it seemed there would be no negative impact to our business in Little Tokyo area. Through a multiple number of meetings and hearings, however, we came to realize that this plan would pose a strong negative impact to our business and livings of people concerned.

Among those in favor of this plan, there are some people who will enjoy the benefits, such as those involved in the construction works, property owners, etc.
For those people, however, even if this plan was brought to halt, they won't be deprived of their lives. On the other hand, we are more seriously threatened because we may be forced to discontinue our business during four years of construction period.
We cannot live with such a humiliation that we are victimized for the sake of some people's benefits and interests. Yet, there is one property owner, who is supportive of our stance, saying " If you can stay in business without any sacrifice in Little Tokyo, it 2

will bring a true benefit in the future. So, we should focus on such a long-term vision, rather than a short-term benefits”

2 cont'd

Regarding the current environmental problems, we are not indifferent to the issue, and we understand that the immediate actions should be taken against the issues of global impacts, such as the global warming, and the reduction of CO2 emission.
Each one of us should bear it in mind and take appropriate behaviors at each individual level. In this context, it may require some public works, but if our livings are victimized by that action, it is utterly absurd just like putting the cart before the horse.

3

In regard to the financial compensation to ease our sufferings, the fact is that nothing is guaranteed whether it is realized in practice or not. Therefore, until all such anxiety is wiped out, we cannot support this construction plan.
Having said that, we would like to ask you to revisit other plans once again.

4

For example,

1. To share the Red Line (By allocating the budget of new subway construction to improve the Red Line. During the temporary period of service interruption, shuttle bus can be utilized instead. We expect this plan is as effective as the new construction of subway.)
2. To build a subway station in the underground behind Moca so as to take a subway route under Temple St.
3. To explore the new route in the underground of either 3rd St. or 4th St.

5

6

7

These are conceivable alternative proposals we make, and we’d like to ask for your proactive consideration to them.

8

The Little Tokyo is the heart and soul of all the Japanese and Japanese American people. It’s not exaggeration to say that the Little Tokyo is even the holy place of Japanese culture for all the American young generation.
The area of Little Tokyo has a historical significance as well. So, we sincerely appeal for your generous understanding of the importance of protection and preservation of this area.
In our Group, some people are already mentally suffered from too much anxiety and claim that they cannot sleep well at night.
There already incurred such damages which cannot be explicitly expressed in figure.

9

How can such sufferings be relieved and compensated?

We are not opposing against the whole plan of subway construction. Our objection is focused only against the plan of Fully Underground Alternative which takes a route of 2nd st.

So, it is our earnest petition to ask you to revisit Fully Underground Alternative plan once again and to review other plans and other route, avoiding a route of 2nd St.

We sincerely hope that you will lent your ears to our desperate petition and come up with a plan which will sustain the well-being and happiness of everybody concerned.

9
cont'd

We all do look forward to hearing from you.

Best regards,

Hiroshi Yamauchi
Koraku Group. Inc.

BU5

Responses to Comments from Koraku Group, Inc., Yamauchi, Hiroshi

Response to Comment BU5-1

Comment acknowledged. Support for the No Build Alternative is noted.

Response to Comment BU5-2

As described in Chapter 2, Alternatives Considered, and Section 4.18, Construction Impacts, of this Final EIS/EIR, since publication of the Draft EIS/EIR, alignment refinements have been made to reduce construction impacts in Little Tokyo, reduce the amount of cut and cover activities, and reduce the extent of acquisitions needed on the block bounded by 1st Street, Central Avenue, 2nd Street, and Alameda Street. Metro acknowledges the disproportionate adverse impacts that Regional Connector construction would have in Little Tokyo, and addresses them in the Mitigation Monitoring and Reporting Program for the Locally Preferred Alternative (Chapter 8) of this Final EIS/EIR. Metro has been working closely with the Little Tokyo community since the outset of the Alternatives Analysis process in October 2007. Metro staff have performed extensive outreach measures, as documented in Chapter 7, Public and Agency Outreach, of the Draft EIS/EIR and this Final EIS/EIR, including numerous public meetings, Japanese and Korean language interpretations, and door-to-door visits with business owners to provide information about the project and gather input. Metro will enact the measures listed in the Mitigation Monitoring and Reporting Program for the Locally Preferred Alternative to minimize impacts to businesses, and will coordinate activities with the community throughout the construction process. Construction activities in the Little Tokyo area would consist of cut and cover activities in the vicinity of the new underground station, the new portals, the junction beneath 1st and Alameda Streets, and a portion of Central Avenue between 1st and 2nd Streets. Refinements to the Locally Preferred Alternative would reduce the extent of cut and cover activities and associated street lane and sidewalk closures. Activities at these locations could be performed simultaneously to minimize the overall duration of the construction process. Tunnel boring machine activities would be staged at the Mangrove property for a period of two to four years, and would not cause impacts anywhere else in the Little
Tokyo community.

It is Metro's goal to help preserve the Little Tokyo community during construction, and Metro agrees that the long-term effects of the Regional Connector would be beneficial.

Response to Comment BU5-3

Metro is committed to minimizing impacts to the Little Tokyo community and also understands the importance of reducing greenhouse gas emissions. As identified in Section 4.17.4 of the Draft EIS/EIR and this Final EIS/EIR, Metro intends to minimize impacts to businesses in Little Tokyo during construction. Sections 4.14.3.4 and 4.14.3.5 of the Draft EIS/EIR and this Final EIS/EIR projected that the Regional Connector would ultimately have long-term beneficial impacts to businesses throughout the project, including in Little Tokyo.

Response to Comment BU5-4

All confirmed mitigation measures are guaranteed by the Mitigation Monitoring and Reporting Program for the Locally Preferred Alternative (Chapter 8) of this Final EIS/EIR and the Record of Decision. The Mitigation Monitoring and Reporting Program for the Locally Preferred Alternative explicitly designates parties responsible for overseeing implementation of the confirmed mitigation measures.

Response to Comment BU5-5

The Metro Red and Purple Lines use a different rail transit mode than the Metro Blue, Gold, and future Expo Lines. The tracks and station platforms are not compatible due to differences in train floor height, train width, and method of electricity conveyance. In order to accommodate the Metro Blue, Gold, and future Expo Line trains, the Regional Connector must have a new alignment separate from the Metro Red/Purple Line tunnels.

Response to Comment BU5-6

A subway route beneath Temple Street would have difficulty connecting to the existing Metro Gold Line bridge over the US 101 Freeway due to the sharp curves that would be necessary. The Locally Preferred Alternative's 2nd/Hope Street station would provide service to the Museum of Contemporary Art on Bunker Hill, and the new underground station in Little Tokyo would provide service to MOCA's Little Tokyo location.

Response to Comment BU5-7

Routes along 3rd Street and 4th Street were considered in the Alternatives Analysis phase of the project, but were not pursued due to the need to perform higher-risk tunneling activities beneath high-rise buildings, preclusion of a station serving Bunker Hill, the need for greater acquisitions, and circuitous connections to the existing Metro Gold Line.

Response to Comment BU5-8

Metro has considered these alternative proposals and provided responses above.

Response to Comment BU5-9

Metro understands the importance of Little Tokyo to the Japanese American community, as shown in Section 4.17.2 of the Draft EIS/EIR and this Final EIS/EIR. It is Metro's goal to minimize impacts to the Little Tokyo community, and Metro will implement the mitigation measures shown in the Mitigation Monitoring and Reporting Program for the Locally Preferred Alternative (Chapter 8) of this Final EIS/EIR to offer assistance and protection to the community throughout the construction process. Metro has refined the Locally Preferred Alternative since publication of the Draft EIS/EIR to eliminate cut and cover construction on 2nd Street in Little Tokyo, reduce property and business acquisitions, and reduce construction impacts. Metro has considered other routes in the Alternatives Analysis process, and these were documented in Appendix H, Final Alternatives Analysis Report, of the Draft EIS/EIR and this Final EIS/EIR. Metro will continue to work with the community throughout the project and foster open dialogue and communication.

Position Statement on the Regional Connector Transit Corridor DEIS/DEIR
(Response to Metro Staff On September 28, 2010, But No Later Than October 10, 2010)

Date: September 28, 2010

Company Name: Cherry Land Company

Address: 612 E. Jackson Street

Telephone/E-Mail 213-620-0764 tsc.mam.wlu@att.net

Name: Wilson Lu

☐ Owner ☐ Employee ☑ Manager ☐ Other: _____

Metro Staff:

With respect to the Regional Connector Transit Corridor Project, we are in support of the ***Little Tokyo Business Association*** and the ***Little Tokyo Business Improvement District*** current position that:

1. ***Locally Preferred Alternative:*** Metros Staff's current recommended ***Fully Underground LRT Alternative*** as the ***locally preferred alternative*** is premature and this recommendation did not adequately seek out the input from the business sector. Therefore, we are cannot support the ***Fully Underground LRT Alternative***, until the ***Little Tokyo Business Improvement District*** has completed a survey of its membership of all the build alternatives, construction impacts, mitigation issues and solutions, which require implementation and documentation in the ***Final Environmental Impact Statement and Environmental Impact Report.*** 1

2. ***Construction Phase Mitigations:*** The current DEIS/DEIR has identified substantial construction related impacts affecting our business community. Among the key concerns which has not been adequately addressed in the current DEIS/DEIR, but is not limited too, is as follows:

   A. ***Preservation of Japanese Business Influence and Culture:*** Little Tokyo is a commercial district, which has served as a ***Japanese Community Center*** for decades. Little Tokyo has a large number of Japanese restaurants and other retail stores. Japanese businesses are particularly concentrated around Japanese Village Plaza on the block bounded by 1st Street, Central Avenue, 2nd Street, and San Pedro Street. The current DEIS/DEIR has identified serious construction impacts under all the build alternatives currently considered by the Regional Connector Project. Serious and real discussion needs to take place with Metro Staff and the Little Tokyo business community to preserve the ***Japanese business influence and culture.*** 2

   B. ***Business Interruption:*** The current DEIS/DEIR has identified numerous construction impacts that will affect the conduct of business and impede access to the business concerns. This will result in serious economic impacts to the Little Tokyo business community. During the 3

course of construction, every effort shall be made to minimize adverse impacts, which businesses, tenants, property owners, and valued visitors/customers may encounter that prevents them from conducting reasonable business and personal activities within the Little Tokyo Community. Additional funding shall be made available for those businesses, tenants, or property owners, whose business endeavors are adversely impacted during the course of construction of the Regional Connector Project. A special business interruption committee shall be established, whose membership shall include Little Tokyo businesses, tenants, and property owners, along with those governmental agencies, having jurisdiction to make policy to resolve issues arising from adverse business interruptions during the course of construction of the Regional Connector Project.

3 cont'd

C. ***Replace of On-Street and Off-Street Parking:*** The current DEIS/DEIR has identified serious construction impacts that will affect traffic and parking within the Little Tokyo community under all the build alternatives. Construction of the Regional Corridor Project will result in the loss of on-street parking and reduction in travel lanes. Lane closures during construction will result in temporary removal of existing on-street spaces and loading stalls. Certain construction requirements will require temporary sidewalk detours, which will impede pedestrian flow. Numerous Little Tokyo street level businesses relay upon the on-street parking spaces for their patrons and street- level pedestrian flow. With the traffic congestion and on-street parking losses, the patrons to these street-level businesses will seriously be economically impacted by customers seeking alternative communities for similar products and services. Therefore, we support the replacement of all off-street parking spaces loss through eminent domain shall be replaced. Further, all on-street and off-street parking spaces taken away during the course of construction shall be replaced.

4

The Regional Connector Transit Corridor is a major project. Construction of this project will affect current businesses and property owners with serious economic impacts, which in turn will affect the future of the Little Tokyo Community.

5

Respectfully yours,

Cherry Land Company

Responses to Comments from Cherry Land Company, Liu, Wilson

Response to Comment BU6-1

Metro's outreach to and involvement with the Little Tokyo community, including the business community, has been extensive. For a more detailed description of this outreach effort, please refer to Chapter 7, Public and Agency Outreach, of this Final EIS/EIR.

Metro held public meetings during the Draft EIS/EIR process, meetings with the Little Tokyo Working Group and individual stakeholders in the Little Tokyo neighborhood, hired an independent consultant for the Little Tokyo Community Council, and performed outreach activities to gather input that ultimately led to the creation of the Fully Underground LRT Alternative. The results of the Little Tokyo Business Improvement District's survey poll on the Regional Connector Transit Corridor project are provided in Comment Letter BU20, below. Metro will implement the mitigation measures in the Mitigation Monitoring and Reporting Program for the Locally Preferred Alternative (Chapter 8) of this Final EIS/EIR, including those suggested by the Little Tokyo community to the extent feasible, in order to minimize impacts to businesses.

Response to Comment BU6-2

Metro recognizes the significance of Little Tokyo to Japanese Americans nationwide, and expressed the community's importance in Section 4.17.2 of the Draft EIS/EIR and this Final EIS/EIR. Metro acknowledges the disproportionate adverse impacts that Regional Connector construction would have in Little Tokyo, and addresses them in the Mitigation Monitoring and Reporting Program for the Locally Preferred Alternative (Chapter 8) of this Final EIS/EIR. Metro has been working closely with the Little Tokyo community since the outset of the Alternatives Analysis process in October 2007. Metro staff have performed extensive outreach measures, as documented in Chapter 7, Public and Agency Outreach, of the Draft EIS/EIR and this Final EIS/EIR, including numerous public meetings, Japanese and Korean language interpretations, and door-to-door visits with business owners to provide information about the project and gather input. Metro will enact the measures listed in the Mitigation Monitoring and Reporting Program for the Locally Preferred Alternative to minimize impacts to businesses, and will coordinate activities with the community throughout the construction process. As described in Chapter 2, Alternatives Considered, and Section 4.18, Construction Impacts, of this Final EIS/EIR, since publication of the Draft EIS/EIR, alignment refinements have been made to reduce construction impacts in Little Tokyo, reduce the amount of cut and cover activities, and reduce the extent of acquisitions needed on the block bounded by 1st Street, Central Avenue, 2nd Street, and Alameda Street. These refinements would reduce construction impacts near the Japanese Village Plaza by eliminating the need for cut and cover activities on 2nd Street in Little Tokyo. It is Metro's goal to help preserve the Little Tokyo community and its businesses during construction. Metro will continue to meet with the community for the duration of the project.

Response to Comment BU6-3

It is Metro's goal to minimize adverse impacts to the Little Tokyo community, including impacts to businesses. Metro will implement the mitigation measures proposed by the Little Tokyo Community Council and Little Tokyo Business Improvement District/Little Tokyo Business Association regarding business interruption shown in the Mitigation Monitoring and

Reporting Program (Chapter 8) of this Final EIS/EIR. Metro will work with the Regional Connector Community Leadership Council to serve all businesses affected by Regional Connector construction.

Response to Comment BU6-4

Metro understands the impacts that construction would have in the Little Tokyo community, and will work with the community to minimize impacts to businesses. During construction, Metro will minimize lane and sidewalk closures, and will provide adequate detours to maintain pedestrian flow. Temporary replacement parking will be provided during construction as needed to offset the impact of on-street and off-street parking removal. As part of temporary replacement parking efforts, Metro will provide two acres of land on the Mangrove property, located at the northeast corner of 1st and Alameda Streets, for the purposes of providing supplemental parking services, such as valet parking services during construction. Please refer to the Transportation Impacts and Environmental Justice sections of Chapter 8, Mitigation Monitoring and Reporting Program for the Locally Preferred Alternative, for more information regarding construction parking
mitigation measures.

Response to Comment BU6-5

Comment acknowledged. Please refer to Responses to Comments BU6-1 through BU6-4, above, for detailed responses to concerns raised by the commenter about project-related construction impacts to the Little Tokyo community. In addition, construction and economic impacts associated with the project were analyzed in Sections 4.14, Economic and Fiscal Impacts, and 4.18, Construction Impacts, of the Draft EIS/EIR and this Final EIS/EIR.

Position Statement on the Regional Connector Transit Corridor DEIS/DEIR
(Response to Metro Staff On September 28, 2010, But No Later Than October 10, 2010)

Date: October 10, 2010

Company Name: Little Tokyo Arts + Gifts

Address: 317 E. 1st Street, Los Angeles, CA 90012

Telephone/E-Mail (213) 620-1496 / ekt999@hotmail.com

Name: Elaine Taigoshi

☑ Owner ☐ Employee ☐ Manager ☐ Other: _____

Metro Staff:

With respect to the Regional Connector Transit Corridor Project, we are in support of the ***Little Tokyo Business Association*** and the ***Little Tokyo Business Improvement District*** current position that:

1. ***Locally Preferred Alternative:*** Metros Staff's current recommended ***Fully Underground LRT Alternative*** as the ***locally preferred alternative*** is premature and this recommendation did not adequately seek out the input from the business sector. Therefore, we ~~are~~ cannot support the ***Fully Underground LRT Alternative***, until the ***Little Tokyo Business Improvement District*** has completed a survey of its membership of all the build alternatives, construction impacts, mitigation issues and solutions, which require implementation and documentation in the ***Final Environmental Impact Statement and Environmental Impact Report.*** 1

2. ***Construction Phase Mitigations:*** The current DEIS/DEIR has identified substantial construction related impacts affecting our business community. Among the key concerns which ~~has~~ have not been adequately addressed in the current DEIS/DEIR, but is not limited to, is as follows: 2

   A. ***Preservation of Japanese Business Influence and Culture:*** Little Tokyo is a commercial district, which has served as a ***Japanese Community Center*** for decades. Little Tokyo has a large number of Japanese restaurants and other retail stores. Japanese businesses are particularly concentrated around Japanese Village Plaza on the block bounded by 1st Street, Central Avenue, 2nd Street, and San Pedro Street. The current DEIS/DEIR has identified serious construction impacts under all the build alternatives currently considered by the Regional Connector Project. Serious and real discussion needs to take place with Metro Staff and the Little Tokyo business community to preserve the ***Japanese business influence and culture.***

   B. ***Business Interruption:*** The current DEIS/DEIR has identified numerous construction impacts that will affect the conduct of business and impede access to the business concerns. This will result in serious economic impacts to the Little Tokyo business community. During the 3

course of construction, every effort shall be made to minimize adverse impacts, which businesses, tenants, property owners, and valued visitors/customers may encounter that prevents them from conducting reasonable business and personal activities within the Little Tokyo Community. Additional funding shall be made available for those businesses, tenants, or property owners, whose business endeavors are adversely impacted during the course of construction of the Regional Connector Project. A special business interruption committee shall be established, whose membership shall include Little Tokyo businesses, tenants, and property owners, along with those governmental agencies, having jurisdiction to make policy to resolve issues arising from adverse business interruptions during the course of construction of the Regional Connector Project.

3 cont'd

C. ***Replace of On-Street and Off-Street Parking:*** The current DEIS/DEIR has identified serious construction impacts that will affect traffic and parking within the Little Tokyo community under all the build alternatives. Construction of the Regional Corridor Project will result in the loss of on-street parking and reduction in travel lanes. Lane closures during construction will result in temporary removal of existing on-street spaces and loading stalls. Certain construction requirements will require temporary sidewalk detours, which will impede pedestrian flow. Numerous Little Tokyo street level businesses relay upon the on-street parking spaces for their patrons and street- level pedestrian flow. With the traffic congestion and on-street parking losses, the patrons to these street-level businesses will seriously be economically impacted by customers seeking alternative communities for similar products and services. Therefore, we support the replacement of all off-street parking spaces loss through eminent domain shall be replaced. Further, all on-street and off-street parking spaces taken away during the course of construction shall be replaced.

4

The Regional Connector Transit Corridor is a major project. Construction of this project will affect current businesses and property owners with serious economic impacts, which in turn will affect the future of the Little Tokyo Community.

Little Tokyo Business Association
And
Little Tokyo Business Improvement District

POSITION STATEMENT
ON THE
REGIONAL CONNECTOR TRANSIT CORRIDOR
DEIS/DEIR

September 28, 2010

Metro Staff:

On May 1, 2009, the ***Little Tokyo Business Association*** submitted to Dolores Roybal Saltarelli, Project Manager – Los Angeles County Metropolitan Transportation Authority, their support for the ***UNDERGROUND EMPHASIS LRT ALTERNATIVE, with a STATION LOCATION AT 2ND STREET, BETWEEN LOS ANGELES AND SAN PEDRO STREETS***, along with a list of concerns, which mitigating measures would be implemented and documented in the ***Final Environment Impact Statement and Final Environmental Impact Report.***

In light of the current efforts by the ***Little Tokyo Community Council,*** the ***Nikkei Center Developer***, the ***Property Owners*** and ***Businesses on the parcel bounded by 1st Street, Alameda Street, 2nd Street and Central Avenue***, and adjacent ***Property Owners, Businesses, Non-Profit Organizations, and Residences adjacent to the intersection of 1st and Alameda Streets***; *Metro Staff* is recommending that the ***Fully Underground LRT Alternative*** be designated the staff recommended ***LOCALLY PREFERRED ALTERNATIVE (LPA)*** in this DEIS/DEIR.

The ***Little Tokyo Business Association*** and the ***Little Tokyo Business Improvement District*** has never taken formal action on the ***Fully Underground LRT Alternative***. In light of the additional ***Fully Underground LRT Alternative*** and the release of the Draft EIS/EIR, the ***LTBA Board of Directors and LTBID Advisory Board*** needs to revisit the build alternatives, construction impacts, mitigation issues and solutions, which require implementation and documentation in the ***Final EIS/EIR***. 1

On September 22, 2010 the ***Board of Directors for the Little Tokyo Business Association*** and the ***Advisory Board for the Little Tokyo Business Improvement District*** held a joint session to discuss the current Regional Connector Transit Corridor DEIS/DEIR. At the recommendation of both Boards, the current position of the ***Little Tokyo Business Association*** and the ***Little Tokyo Business Improvement District,*** with respect to the Regional Connector Transit Corridor Project, is as follows:

1. ***LOCALLY PREFERRED ALTERNATIVE***: Metro Staff's current recommended ***LOCALLY PREFERRED ALTERNATIVE*** is premature and its recommendation did not adequately seek out the input from the business sector. Therefore, the ***Little Tokyo Business Association*** rescind its prior support for the ***UNDERGROUND EMPHASIS LRT ALTERNATIVE,*** pending a survey from the ***Little Tokyo Business Improvement District's*** 400 members, of their selection of the alternatives currently under consideration for the Regional Connector Transit Corridor project as the recommended ***LOCALLY PREFERRED ALTERNATIVE.***

2. ***CONSTRUCTION PHASE MITIGATIONS:*** Metro Staff has established the ***Little Tokyo Working Group***, as a forum that allows closer examination of the community concerns as it relates to the Regional Connector Project. Both Boards are ready, willing, and able to participate in the ***Little Tokyo Working Group*** to identify and address the business community concerns, with respect to the substantial construction phase impacts that will occur during the pre-construction and the actual construction phase of the Regional Connector Project. Among the key concerns, which has not been adequately addressed in the current DEIS/DEIR, but is not limited too, is as follow:

   A. ***Preservation of Japanese Business Influence and Culture:*** Little Tokyo is a commercial district, which has served as a ***Japanese Community Center*** for decades. Little Tokyo is one of the three remaining "Japan Towns" in the United States, the other two are in San Francisco and San Jose. Before World War II, Little Tokyo was the largest Japanese-American community. Little Tokyo once encompassed a larger area than today.

   Little Tokyo has existed since the early 1900's, and has included commercial and residential uses. During World War II and the Japanese internment, Little Tokyo was abolished and renamed Bronzeville. Bronzeville was comprised primarily of African-Americans and Hispanics. Upon the return of interred Japanese, Little Tokyo was revitalized as a Japanese-American community, though not on the pre-war scale. In 1970, Little Tokyo was designated a redevelopment area by the Community Redevelopment Agency of the City of Los Angeles. With the assistance of the CRA/LA, Little Tokyo became the entry point for Japanese corporations into Southern California. Japanese business influence led to further changes in the social, political, physical, and economic environment of Little Tokyo.

   Little Tokyo has a large number of Japanese restaurants and other retail stores. Japanese businesses are particularly concentrated around Japanese Village Plaza on the block bounded by 1st Street, Central Avenue, 2nd Street, and San Pedro Street. The current DEIS/DEIR has identified serious construction impacts under all the build alternatives currently considered by the Regional Connector Project. Serious and real discussions needs to take place with Metro Staff and the Little Tokyo business community to preserve the ***Japanese business influence and culture.***

   B. ***Business Interruption:*** The current DEIS/DEIR has identified numerous construction impacts that will affect the conduct of business and impede access to the business concerns. This will result in serious economic impacts to the Little Tokyo business community. During the course of construction, every effort shall be made to minimize adverse impacts which, businesses, tenants, property owners, and valued visitors/customers may encounter that prevents them from conducting reasonable business and personal activities within the Little Tokyo Community. Additional funding shall be made available for those businesses, tenants, or property owners whose business endeavors are adversely impacted during the course of construction of the Regional Connector Project. A special business interruption committee shall be established, whose membership shall include Little Tokyo businesses, tenants, and property owners, along with those governmental agencies, having jurisdiction to make policy to resolve issues arising from adverse business interruptions during the course of construction of the Regional Connector Project.

2

3

C. ***Replacement On-Street and Off-Street Parking:*** The current DEIS/DEIR has identified serious construction impacts that will affect traffic and parking within the Little Tokyo community under all of the build alternatives. Construction of the Regional Connector Project will result in the loss of on-street parking and reduction in travel lanes. Lane closures during construction would result in temporary removal of existing on-street spaces and loading stalls. Certain construction requirements will require temporary sidewalk detours , which will impede pedestrian flow.

Numerous Little Tokyo street level businesses relay on on-street parking for their patrons and the street-level pedestrian flow. With the traffic congestion and on-street parking losses, the patrons to these street level businesses will seriously be economically impacted by customers seeking alternative communities for similar products and services.

All off-street parking spaces loss through eminent domain shall be replaced. All on-street and off-street parking spaces taken away during the course of construction shall be replaced.

4

The Regional Connector Transit Corridor is a major project. Construction of this project will affect current businesses and property owners with serious economical impacts, which in turn will affect the future of the Little Tokyo Community. We the ***Little Tokyo Business Association*** and the ***Little Tokyo Business Improvement District*** are ready, willing and able to discuss our concerns with the Metro Staff.

5

Respectfully yours,
Little Tokyo Business Association, Board of Directors
Little Tokyo Business Improvement District, Advisory Board

Responses to Comments from Little Tokyo Business Association and Little Tokyo Business Improvement District

Response to Comment BU18-1

Metro received the referenced letter and has incorporated mitigation measures suggested by the Little Tokyo community in Section 4.17.5 of the Draft EIS/EIR to the extent feasible. Metro created the Fully Underground LRT Alternative in response to community input, and the Metro Board of Directors voted on October 28, 2010 to designate the Fully Underground LRT Alternative as the Locally Preferred Alternative. In response to comments from the Little Tokyo Community Council, Little Tokyo Business Improvement District, and Little Tokyo Business Association, Metro has refined the Locally Preferred Alternative since publication of the Draft EIS/EIR to eliminate cut and cover construction on 2nd Street in Little Tokyo, reduce property and business acquisitions, and reduce construction impacts. Metro will continue to work closely with the Little Tokyo community groups throughout the project, and has met with the Little Tokyo Business Association and Little Tokyo Business Improvement District to present the proposed alignment refinements.

Metro held public meetings during the Draft EIS/EIR process, meetings with the Little Tokyo Working Group and individual stakeholders in the Little Tokyo neighborhood, hired an independent consultant for the Little Tokyo Community Council, and performed outreach activities to gather input that ultimately led to the creation of the Fully Underground LRT Alternative. The results of the Little Tokyo Business Improvement District's survey poll on the Regional Connector Transit Corridor project are provided in Comment Letter BU20, below. Metro will implement the mitigation measures in the Mitigation Monitoring and Reporting Program for the Locally Preferred Alternative (Chapter 8) of this Final EIS/EIR, including those suggested by the Little Tokyo community to the extent feasible, in order to minimize impacts to businesses.

Response to Comment BU18-2

Metro welcomes the Little Tokyo Business Association and Little Tokyo Business Improvement District's participation in the Little Tokyo Working Group, and will continue to address community concerns in this forum throughout the duration of the project.

Metro recognizes the significance of Little Tokyo to Japanese Americans nationwide, and expressed the community's importance in Section 4.17.2 of the Draft EIS/EIR and this Final EIS/EIR. Thank you for the additional community history provided in the comment. Metro acknowledges the disproportionate adverse impacts that Regional Connector construction would have in Little Tokyo, and addresses them in the Mitigation Monitoring and Reporting Program for the Locally Preferred Alternative (Chapter 8) of this Final EIS/EIR. Metro has been working closely with the Little Tokyo community since the outset of the Alternatives Analysis process in October 2007. Metro staff have performed extensive outreach measures, as documented in Chapter 7, Public and Agency Outreach, of the Draft EIS/EIR and this Final EIS/EIR, including numerous public meetings, Japanese and Korean language interpretations, and door-to-door visits with business owners to provide information about the project and gather input. Metro will enact the measures listed in the Mitigation Monitoring and Reporting Program for the Locally Preferred Alternative to minimize impacts to businesses, and will

coordinate activities with the community throughout the construction process. As described in Chapter 2, Alternatives Considered, and Section 4.18, Construction Impacts, of this Final EIS/EIR, since publication of the Draft EIS/EIR, alignment refinements have been made to reduce construction impacts in Little Tokyo, reduce the amount of cut and cover activities, and reduce the extent of acquisitions needed on the block bounded by 1st Street, Central Avenue, 2nd Street, and Alameda Street. These refinements would reduce construction impacts near the Japanese Village Plaza by eliminating the need for cut and cover activities on 2nd Street in Little Tokyo. It is Metro's goal to help preserve the Little Tokyo community and its businesses during construction.

Response to Comment BU18-3

It is Metro's goal to minimize adverse impacts to the Little Tokyo community, including impacts to businesses. Metro will implement the mitigation measures proposed by the Little Tokyo Community Council and Little Tokyo Business Improvement District/Little Tokyo Business Association regarding business interruption shown in the Mitigation Monitoring and Reporting Program (Chapter 8) of this Final EIS/EIR. Metro will work with the Regional Connector Community Leadership Council to serve all businesses affected by Regional Connector construction.

Response to Comment BU18-4

Metro understands the impacts that construction would have in the Little Tokyo community, and will work with the community to minimize impacts to businesses. During construction, Metro will minimize lane and sidewalk closures, and will provide adequate detours to maintain pedestrian flow. Temporary replacement parking will be provided during construction as needed to offset the impact of on-street and off-street parking removal. As part of temporary replacement parking efforts, Metro will provide two acres of land at the Mangrove property, located at the northeast corner of 1st and Alameda Streets, for the purposes of providing valet parking services during construction. Please refer to the Transportation Impacts and Environmental Justice sections of Chapter 8, Mitigation Monitoring and Reporting Program for the Locally Preferred Alternative, for more information regarding construction parking mitigation measures.

Response to Comment BU18-5

Comment acknowledged. Please refer to Responses to Comments BU18-1 through BU18-4, above, for detailed responses to concerns raised by the commenter about project-related construction impacts to the Little Tokyo community. Metro will continue to coordinate with the Little Tokyo Business Association and Little Tokyo Business Improvement District through the rest of the design phase and the construction phase of this project.

Re: DEIS/DEIR – Regional Connector Transit System

Dear Ms. Roybal-Saltarelli:

In addition to our September 28, 2010 comments on the Regional Connector Transit Corridor Project , the ***Little Tokyo Business Association*** and ***Little Tokyo Business Improvement District*** are offering the following comments on the *DEIS* and *DEIR*.

Little Tokyo Business Interruption Consortium: The consortium of (1) ***Little Tokyo Business Association***, (2) ***Little Tokyo Business Improvement District***, (3) ***Japanese Chamber of Commerce of Southern California***, and (4) ***Little Tokyo Community Council*** be formed to work along with ***Metro Staff*** and other ***Governmental Agencies*** having jurisdiction, to develop policy, regulations, and procedures to resolve issues arising from adverse business interruption during the course of construction of the Regional Connector Project. The ***Little Tokyo Business Interruption Consortium*** shall be co-chaired by the President of the respective organizations listed. Any "***business interruption committee***" to be formed shall ***not be limited*** to the supervision of a single Little Tokyo organization nor granted exclusive powers of oversight. Little Tokyo has many organizations, which the listed four (4) above are considered the major organization representing a cross section of the business sector, non-profit organization sector, and the residential sector. To allow a single Little Tokyo organization to act as the sole and exclusive leadership would ***not be proper***. The ***Little Tokyo Business Interruption Consortium*** is the proper structure to work with ***Metro Staff*** in addressing serious construction impacts the Little Tokyo Community will be encountering. 1

Little Tokyo Construction Mitigation Program: We encourage the establishment of a ***Little Tokyo Construction Mitigation Program*** for the purpose of compensating constructing impact business interruption injuries. Should ***Metro*** or any other ***Governmental Agency*** establish a mitigation funding program for construction impact related business interruption injuries and other construction impacts that alters the business operations resulting in physical changes to business concerns, the ***Little Tokyo Business Interruption Consortium*** shall have active participation in the decision making process. 2

Respectfully yours,
Little Tokyo Business Association, Board of Directors
Little Tokyo Business Improvement District, Advisory Board

Responses to Comments from Little Tokyo Business Association and Little Tokyo Business Improvement District

Response to Comment BU19-1

Metro welcomes the opportunity to work with a Little Tokyo business consortium and all other affected stakeholders throughout the duration of the project. Metro will also work with the Regional Connector Community Leadership Council to serve all businesses affected by Regional Connector construction.

Response to Comment BU19-2

The Mitigation Monitoring and Reporting Program for the Locally Preferred Alternative (Chapter 8) of this Final EIS/EIR contains the confirmed mitigation measures intended to assist Little Tokyo businesses and minimize adverse impacts during the construction phase of the project. It is Metro's goal to minimize the potential for business interruption. Metro welcomes the opportunity to work with the Little Tokyo business community throughout the construction phase of the project.

Subject: Regional Connector Transit Corridor Project – DEIS/DEIR

Dear Ms. Roybal-Saltarelli:

In addition to our September 28, 2010 and October 4, 2010 comments on the Regional Connector Transit Corridor Project, the ***Little Tokyo Business Association*** and the ***Little Tokyo Business Improvement District*** are offering the following comments on the DEIS/DEIR. 1

Locally Preferred Alternative: NO-BUILD

Enclosed along with this letter, you will find the "Survey Poll" results, plus copies of the returned survey forms, conducted by the ***Little Tokyo Business Improvement District.*** This survey poll asked the stakeholders of the Little Tokyo Community to guide the ***Little Tokyo Business Improvement District*** in determining a locally preferred alternative currently under consideration. 2

One thousand two hundred twenty two (1,222) survey forms were returned by the stakeholders of the Little Tokyo Community.

With respect to the ***NO-BUILD*** alternative, one thousand eighty eight (1,088) responded, resulting in seventy-one percent (71%) ***"supporting"*** the ***NO-BUILD*** selection as the locally preferred alternative, as currently proposed in the DEIS/DEIR.

With respect to the ***FULLY UNDERGROUND*** alternative, seven hundred twenty four (724) responded, resulting in eight three percent (83%) ***"no-support*** " for the ***FULLY UNDERGROUND*** selection as the locally preferred alternative as currently proposed in the DEIS/DEIR. 3

Therefore, the ***Little Tokyo Business Association*** and the ***Little Tokyo Business Improvement District*** is recommending the ***NO-BUILD*** alternative as the only acceptable option as the locally preferred alternative that addresses the economic, social, cultural and environmental impacts to the Little Tokyo community as currently proposed in the DEIS/DEIR.

Further, the ***Little Tokyo Business Association*** and the ***Little Tokyo Business Improvement District,*** request a postponement of a locally preferred alternative selection by the MTA Board at its October 28, 2010 board meeting. 4

Construction Phase Mitigation Issues:

Under all the ***"BUILD ALTERNATIVES"*** currently under consideration, substantial pre-construction and construction impacts are anticipated that will seriously affect the conduct of business , economy, and social life in the Little Tokyo Community. In our September 28, 2010 comments, we addressed key concerns which has not been adequately addressed in the current DEIS/DEIS.

The "Survey Poll" asked the stakeholders of the Little Tokyo community, the following key concerns for their guidance.

Preservation of Japanese Business Influence and Culture:

Nine hundred forty (940) responded in the survey poll, resulting in ninety four percent (94%) ***"supporting"*** the preservation of the ***Japanese Business Influence and Culture*** in our community.

The current DEIS/DEIR does not properly address how the construction phase impacts and the operational phase of the Regional Connector Transit Corridor will preserve the Japanese business influence and culture. Metro Staff has not clearly addressed this issue in the current propose DEIS/DEIR.

5

Business Interruption Compensation Fund Program:

Nine hundred forty (940) responded in the survey poll, resulting in ninety four percent (94%) ***"supporting"*** a ***"Business Interruption Compensation Fund Program"*** for those businesses, property owners, and tenants of the Little Tokyo community that will be economic injured by substantial construction impacts during the construction of the Regional Connector Transit Corridor project.

The current DEIS/DEIR does not properly address the anticipated pre-construction and construction phase impacts upon the Little Tokyo business economy. Further, the current DEIS/DEIR does not clearly address the remedies that need to be implemented in the DEIS/DEIR to properly address these serious economic injuries caused by the construction of the Regional Connector Transit Corridor project. Metro Staff has not clearly addressed this issue in the current propose DEIS/DEIR.

6

Replacement of On-Street Parking and Off-street Parking Spaces:

Nine hundred forty four (944) responded in the survey poll, resulting in ninety four percent (94%) "***supporting"*** the replacement of on-street and off-street parking spaces permanently loss and caused by the construction of the Regional Connector Transit Corridor project.

The current DEIS/DEIR does not adequately address the replacement of on-street and off-street parking spaces loss permanently by the construction of the Regional Connector Transit Project. Numerous Little Tokyo street level businesses rely on on-street parking for their patrons and the street level pedestrian flow. With the on-street parking losses, the patrons to these street level businesses will be seriously affected, resulting in substantial economic losses. Metro Staff has not clearly addressed this issue in the current propose DEIS/DEIR.

7

The ***Little Tokyo Business Association*** and the ***Little Tokyo Business Improvement District,*** request a postponement of approving the current Draft Environmental Impact Statement and Draft Environmental Impact Report by the MTA Board at its October 28, 2010 board meeting.

8

Thank you for your consideration. We are ready, able and willing to work with Metro Staff to address our mutual concerns.

Respectfully yours,

Wilson Liu

BU20

Responses to Comments from Little Tokyo Business Association and Little Tokyo Business Improvement District, Liu, Wilson

Response to Comment BU20-1

Thank you for your comment. Support for the No Build Alternative is noted. The Metro Board of Directors voted on October 28, 2010 to designate the Fully Underground LRT Alternative as the Locally Preferred Alternative. Please refer to Responses to Comments BU20-2 through BU20-8, below, for detailed responses regarding concerns raised by the commenter.

Response to Comment BU20-2

Comment acknowledged. The survey poll results have been included as part of Comment Letter BU20 in this Final EIS/EIR. Please see Responses to Comments BU20-3 through BU20-8, below, which address the results of the survey poll. Copies of the returned survey forms are available at Metro due to length, and are incorporated herein by reference.

Response to Comment BU20-3

Thank you for your comment. Support for the No Build Alternative is noted. The Metro Board of Directors voted on October 28, 2010 to designate the Fully Underground LRT Alternative as the Locally Preferred Alternative.

Response to Comment BU20-4

Comment noted. The Metro Board of Directors voted on October 28, 2010 to designate the Fully Underground LRT Alternative as the Locally Preferred Alternative. Metro has since refined the Locally Preferred Alternative to eliminate cut and cover construction on 2nd Street in Little Tokyo, reduce property and business acquisitions, and minimize construction impacts to businesses.

Response to Comment BU20-5

It is Metro's goal to help preserve the Little Tokyo community and its businesses during construction. Metro recognizes the significance of Little Tokyo to Japanese Americans nationwide, and expressed the community's importance in Section 4.17.2 of the Draft EIS/EIR and this Final EIS/EIR. Metro plans to support the community and its businesses during construction using the mitigation measures shown in the Mitigation Monitoring and Reporting Program for the Locally Preferred Alternative (Chapter 8) of this Final EIS/EIR, and ensure that impacts to all businesses and cultural resources are minimized. A discussion of the potential impacts of the Locally Preferred Alternative framed by Little Tokyo's concerns as a minority community was provided in Section 4.17.3.5 of the Draft EIS/EIR and this Final EIS/EIR, and Metro believes this analysis is adequate pursuant to NEPA, CEQA, and federal Executive Order 12898. This Final EIS/EIR contains changes based on subsequent alignment refinements that would reduce construction impacts in Little Tokyo.

Response to Comment BU20-6

The survey responses regarding community desire to preserve Japanese business influence and culture are noted. It is Metro's goal to minimize adverse impacts to the Little Tokyo community, including impacts to businesses. Metro will implement the mitigation measures proposed by

the Little Tokyo Community Council and Little Tokyo Business Improvement District/Little Tokyo Business Association regarding business interruption shown in the Mitigation Monitoring and Reporting Program (Chapter 8) of this Final EIS/EIR. Metro will work with the Regional Connector Community Leadership Council to serve all businesses affected by Regional Connector construction.

Response to Comment BU20-7

Metro understands the impacts that construction would have in the Little Tokyo community, and will work with the community to minimize impacts to businesses. During construction, Metro will minimize lane and sidewalk closures, and will provide adequate detours to maintain pedestrian flow. Temporary replacement parking will be provided during construction as needed to offset the impact of on-street and off-street parking removal. As part of temporary replacement parking efforts, Metro will provide two acres of land on the Mangrove property, located at the northeast corner of 1st and Alameda Streets, for the purposes of providing supplemental parking services, such as valet parking services during construction. Please refer to the Transportation Impacts and Environmental Justice sections of Chapter 8, Mitigation Monitoring and Reporting Program for the Locally Preferred Alternative, for more information regarding construction parking mitigation measures.

Response to Comment BU20-8

Comment acknowledged. Under the NEPA/CEQA environmental review process, the lead agency decides whether or not to certify this Final EIS/EIR, not the Draft EIS/EIR. On October 28, 2010, the Metro Board of Directors voted to designate the Fully Underground LRT Alternative as the Locally Preferred Alternative.

Metro looks forward to continuing coordination with the Little Tokyo Business Association and Little Tokyo Business Improvement District during the remaining phases of the project.

Subject: Regional Connector Comment

To whom it may concern:

Due to personal/medical ongoing medical issues that have been ongoing in my family of late, I can not make any type of detailed commentary about the Draft EIR. Being a business person in Little Tokyo I am aware of the position that the LTCC has taken and the letter that has been sent to the MTA from the board of the LTCC.

I do want to get on the record and receive acknowledgment back from the MTA the fact that my business, Advanced Parking Systems ("APS") will certainly be directly affected by the Regional Connector in the event that it does become a reality and if the fully underground alternative with a station under the "Volk property" is adopted. 1

In that case, I want to state for the record that I would like to speak with the appropriate individual(s) from the MTA in terms of direct compensation, relocation, etc.. for my business--again APS will not be indirectly affected but directly affected. Likely we will lose our entire business for a period of years due to construction.

Please respond and confirm receipt of the above email message.

Thank you,

Darryl Garibay, President

Response to Comment BU21-1

Metro will confirm during final design which properties would need to be acquired for the project. Once this process is completed, Metro will contact property owners. As indicated in Section 4.2.1 of the Draft EIS/EIR and this Final EIS/EIR, compensation and relocation assistance will be provided to displaced businesses consistent with the Uniform Relocation Assistance and Real Property Acquisition Policies Act of 1970.

Subject: Comments on Draft EIS/EIR - Bryant Ng & Kim Luu-Ng

Attached please find our comments for the official record regarding the Regional Connector Draft EIS/EIR in a Word file. I've also included the comments in the body of this email.

Thank you,
Bryant Ng
The Spice Table
114 S. Central Ave.
Los Angeles, CA 90012
818-593-9082

Following are our comments:

- Little Tokyo is one of the few unique neighborhoods in all of Los Angeles, and in the past 5-10 years has really transformed into a destination, not only for tourists, but for locals as well. The soul of Little Tokyo resides in its "mom-and-pop" shops who's fate will be determined by the decisions made by the Metro Board with respect to the Regional Connector Project.
- We support the At-grade alternative because it has the least impact on the Little Tokyo community and because of its lower cost.

1

- Do not take 114 S. Central Ave. (APN 5163018021).
  - If the fully-underground scenario is chosen, please choose the engineering alternative that does not destroy the group of restaurants on Central Ave., including 114 S. Central Ave., soon to be The Spice Table.
  - I am the owner of The Spice Table (serving cuisine influenced by Singapore and Vietnam) that is currently under construction and will open by December of 2010. Located at 114 S. Central Ave. (APN 5163018021). Although we are a "mom-and-pop" restaurant I have spent the majority of my professional culinary career working for well regarded Chefs in Los Angeles, New York, and San Francisco. Most recently I launched Pizzeria Mozza (www. mozza-la.com) as Chef-de-Cuisine, along with its owners Nancy Silverton and Mario Batali, into one of the country's most visible and commercially successful restaurants. During my time at Mozza it received numerous accolades and awards from national and regional publications/organizations including: Los Angeles Times, LA Weekly, New York Times, The Wall Street Journal, San Francisco Chronicle, Gourmet, The James Beard Foundation, Food and Wine, Bon Appétit, Los Angeles Magazine, Wine Spectator, Angelino, Travel and Leisure, Forbes, GQ, Zagat and Michelin. I hope that with my pedigree and with the concept we have for that specific location in Little Tokyo that we grow and add to the Little Tokyo community as well as to the overall landscape of dining in Los Angeles.
  - Our lease was signed prior to the fully underground scenario was introduced. Had we know I would have never have gone into a space that is potentially doomed.
  - This is not trivial, it is our livelihood. This particular location was chosen because of its historic feel (historic brick

2

building) and central location in Little Tokyo. For restaurants the location and "feel" of the place is crucial to the success of the restaurant. The location and natural "feel" cannot be replicated if the restaurant is simply moved. In addition it will take some time to recupe the initial costs for the start up of the restaurant. For most successful restaurants this takes a minimum of 4-5 years. If the fully-underground scenario is passed and the Engineers deem it necessary to destroy our restaurant we will not be able to recupe our costs and start again. Not to mention loss of credibility with those who have invested in us.
    - You will be taking away one of the most unique locations in Little Tokyo. The building at 114 S. Central has been around for over one century. We are spending time and money to restore its natural beauty to add to the already growing neighborhood. It's one of the few buildings of its kind left in Los Angeles.

2 cont'd

- The restaurants along Central Ave. are a main hub of activity in Little Tokyo.
    - Taking it away will negatively impact the Little Tokyo neighborhood.

3

- LTSC may be the political voice of Little Tokyo, but they do not represent all the voices in Little Tokyo and the business owners (even those who are currently unaware of the situation with the Regional Connector, despite efforts to inform them) will band together if the business are taken away or if there is no mitigation.
    - Unfortunately many of the business owners in the area have not voiced their opinion over the course of the Environmental Analysis period. This has been because they have not been adequately informed despite outreach efforts, or simply because they are not accustomed to voicing their opinion.
    - If the businesses are taken away and if there is no appropriate mitigation we and the community will exhaust all legal and political avenues.

4

- Mitigation during the construction phase.
    - Construction is extremely disruptive and will alter our businesses. And in many cases may result in the closure of many "mom-and-pop" shops, which are the soul of Little Tokyo.
    - We ask that there be more than just a mere consideration of mitigation for the businesses impacted by the Regional-connector.
    - Including – "business interruption payments" and well as other issues previously brought up by Little Tokyo members such as:
        - Compensate property owners and businesses that are Relocated.
        - Metro provides extensive marketing program tailored to meet needs of local businesses
        - Metro provides financial resources to community and businesses to provide further targeted marketing
        - Publicize Little Tokyo businesses on Metro buses, construction barriers
        - Provide temporary parking, central valet service
        - Work with LTBA to offset impacts from reduced revenue from Business Improvement District

5

Sincerely,

Bryant Ng and Kim Luu-Ng

Responses to Comments from The Spice Table, Ng, Bryant and Kim Luu

Response to Comment BU22-1

Thank you for your comment. Support for the At-Grade Emphasis LRT Alternative is noted. The Metro Board of Directors voted on October 28, 2010 to designate the Fully Underground LRT Alternative as the Locally Preferred Alternative.

Response to Comment BU22-2

Metro analyzed the impacts of these acquisitions, and will minimize acquisitions to the extent feasible. Restaurant ownership and experience is noted. Acquisition of the property in question was analyzed as part of the Underground Emphasis LRT Alternative, which has been under consideration since the Alternatives Analysis phase (October 2007 through early 2009). As indicated in Section 4.2.1 of the Draft EIS/EIR and this Final EIS/EIR, compensation and relocation assistance will be provided to displaced businesses consistent with the Uniform Relocation Assistance and Real Property Acquisition Policies Act of 1970. The historical significance of the building was evaluated in the comprehensive building inventory at the end of Appendix X, Cultural Resources - Built Environment, of the Draft EIS/EIR and Appendix X, Cultural Resources - Built Environment (Updated), of this Final EIS/EIR. Metro understands the importance of local businesses, and will minimize impacts to businesses and acquisitions to the extent feasible.

Response to Comment BU22-3

Metro recognizes the importance of the restaurants along Central Avenue to the Little Tokyo community, and has refined the Locally Preferred Alternative to minimize acquisitions of these restaurants. Under the refined Locally Preferred Alternative, none of the restaurants fronting Central Avenue would be displaced with the exception of The Spice Table.

Response to Comment BU22-4

Metro has met with the Little Tokyo Business Association and the Little Tokyo Business Improvement District on multiple occasions to discuss the Regional Connector and the Fully Underground LRT Alternative, as documented in Chapter 7, Public and Agency Outreach, of the Draft EIS/EIR and this Final EIS/EIR. Advertisements regarding scoping meetings and community updates were printed in local newspapers, including Japanese language publications. Outreach staff has maintained a consistent presence in the community and has gone door-to-door to speak with business owners. Mitigation measures were identified for the Locally Preferred Alternative to address the impacts related to displacement of businesses, and Metro has confirmed their implementation in the Mitigation Monitoring and Reporting Program for the Locally Preferred Alternative (Chapter 8) of this Final EIS/EIR. Displaced businesses will be compensated and offered relocation assistance per the Uniform Relocation Assistance and Real Property Acquisition Policies Act of 1970 as discussed in Section 4.2.1 of the Draft EIS/EIR and this Final EIS/EIR. Metro will mitigate impacts to businesses to the extent feasible. Appropriate mitigation measures proposed in the Draft EIS/EIR (including all feasible mitigation measures proposed by the Little Tokyo Working Group in Section 4.17.5) are confirmed in the Mitigation Monitoring and Reporting Program for the Locally Preferred Alternative (Chapter 8) of this Final EIS/EIR, and the Record of Decision.

Response to Comment BU22-5

Metro recognizes the construction impacts that the Regional Connector would have in Little Tokyo. The Mitigation Monitoring and Reporting Program for the Locally Preferred Alternative (Chapter 8) of this Final EIS/EIR contains the confirmed mitigation measures intended to assist Little Tokyo businesses and minimize adverse impacts. Metro believes that these mitigation measures will be comprehensive enough to protect and support businesses during the construction phase of the project. This will include a targeted marketing program developed in conjunction with the business community, including business advertising. Metro will also provide two acres of land on the Mangrove property for the purposes of providing supplemental parking services, such as valet parking services during construction. Metro will continue to work closely with the Little Tokyo Business Association/Little Tokyo Business Improvement District, and expects that the mitigation measures in this Final EIS/EIR will help offset the potential financial impacts of construction.

October 14, 2010

Ms. Dolores Roybal Saltarelli
Project Manager
Metro
One Gateway Plaza
Los Angeles, CA 90012-2952

Dear Ms. Dolores Roybal Saltarelli,

I am writing to support a "No build" option concerning the Little Tokyo Regional Connector. 1

I am writing this letter to you on behalf of myself and other business owners that would suffer greatly if this construction were to go forward.

Little Tokyo has a long and important history and part of that history is the businesses that line Little Tokyo. Many of these stores are decades old, couple have past the century mark. Their survival is in part what Little Tokyo is all about. Through many hardships that Little Tokyo has seen, it's these stores that have helped shape and define Little Tokyo. The storefronts are what give life to Little Tokyo; it is what brings people into Little Tokyo. 2

Construction phase of this magnitude has shown that many businesses will not survive to reap the benefits of this new connector. What benefit will this connector serve to Little Tokyo when the life of Little Tokyo is destroyed in the construction?

Unfortunately for us, neither The Little Tokyo Community Council (LTCC) nor the Little Tokyo Working Group (LTWG) has ever approached the merchants (The "mom and pop" stores) and asked us how we felt about this construction; and perhaps you may have felt that the entire community was being represented. We just wanted you to know that LTCC and the LTWG represent only itself and the majority of the community has serious concerns about this project. 3

We are not against progress; however, given the choice between progress and destroying the life of Little Tokyo, there can be but one choice. We have an obligation to protect Little Tokyo, its history and our very own livelihoods and encourage you find other options to keep Little Tokyo safe from destruction.

Sincerely your,

Kenji Suzuki
President, Suehiro Café, Inc.

Responses to Comments from Suehiro Café, Inc., Suzuki, Kenji

Response to Comment BU23-1

Thank you for your comment. Support for the No Build Alternative is noted. The Metro Board of Directors voted on October 28, 2010 to designate the Fully Underground LRT Alternative as the Locally Preferred Alternative.

Response to Comment BU23-2

Metro recognizes the significance of Little Tokyo and its businesses to Japanese Americans nationwide, and expressed the community's importance in Section 4.17.2 of the Draft EIS/EIR and this Final EIS/EIR. Metro acknowledges the disproportionate adverse impacts that Regional Connector construction would have in Little Tokyo, and addresses them in the Mitigation Monitoring and Reporting Program for the Locally Preferred Alternative (Chapter 8) of this Final EIS/EIR. Metro has been working closely with the Little Tokyo community since the outset of the Alternatives Analysis process in October 2007. Metro staff have performed extensive outreach measures, as documented in Chapter 7, Public and Agency Outreach, of the Draft EIS/EIR and this Final EIS/EIR, including numerous public meetings, Japanese and Korean language interpretations, and door-to-door visits with business owners to provide information about the project and gather input. Metro will enact the measures listed in the Mitigation Monitoring and Reporting Program for the Locally Preferred Alternative to minimize impacts to businesses and cultural resources, and will coordinate activities with the community throughout the construction process. As described in Chapter 2, Alternatives Considered, and Section 4.18, Construction Impacts, of this Final EIS/EIR, since publication of the Draft EIS/EIR, alignment refinements have been made to reduce construction impacts in Little Tokyo, reduce the amount of cut and cover activities, and reduce the extent of acquisitions needed on the block bounded by 1st Street, Central Avenue, 2nd Street, and Alameda Street. It is Metro's goal to help preserve the Little Tokyo community and its businesses during construction. Metro believes that the Regional Connector will benefit the Little Tokyo community through greater accessibility, improved options for traveling to the community without a car, and the potential for improved economic development.

Response to Comment BU23-3

Metro has performed extensive outreach activities to involve Little Tokyo stakeholders in the project development process. Metro has met with the Little Tokyo Business Association and the Little Tokyo Business Improvement District on multiple occasions to discuss the Regional Connector and the Fully Underground LRT Alternative, as documented in Chapter 7, Public and Agency Outreach, of the Draft EIS/EIR and this Final EIS/EIR. Advertisements regarding scoping meetings and community updates were printed in local newspapers, including Japanese language publications. Outreach staff has maintained a consistent presence in the community and has gone door-to-door to speak with business owners. Appropriate mitigation measures have been identified to address the impacts to businesses, and Metro has confirmed their implementation in the Mitigation Monitoring and Reporting Program for the Locally Preferred Alternative (Chapter 8) of this Final EIS/EIR. It is Metro's goal to minimize impacts to businesses in Little Tokyo.

PROTEST of

JO-ANN AND ROGER GRACE

to the proposed taking of the

Wilcox Building

200-210 S. Spring Street

(APN 5149007006)

and the

Olender Building

212-218 S. Spring Street

(APN 5149007005)

Fact sheet and accompanying booklet

Interior of the Wilcox Building., home in 1896-24 of H. Jevne, premier grocery store on the West Coast. Stairway was copied in Jevne's new store at 6th and Broadway, opened 1906. Jevne's space is now home of the Metropolitan News Company.

1.) The recommendation of a taking of the Wilcox Building at Second and Spring Streets and the Olender Building next to it are based on <u>factually incorrect propositions</u>.

● The major tenant is not, as portrayed in the report[1], a restaurant; it is a newspaper company. The Metropolitan News Company's flagship newspaper is the Metropolitan News-Enterprise, which goes back to 1901. A taking of the buildings owned by Jo-Ann and Roger Grace would be ruinous to their wholly-owned business, the Metropolitan News Company, and thus imperil the continued existence of the Metropolitan News-Enterprise and the Metropolitan News Company's other seven California newspapers.

● While the report contends that there are 40 employees spread among the five businesses in the building, the Metropolitan News Company, alone, employs 47 persons, whose jobs would be put in jeopardy, affecting them and their families.[2] The other businesses employ at least 15 others—for a total of 62.

● This doom-and-gloom assessment—in contrast to what the report conveys of no meaningful potential adverse impact—is not theatrics. It is based on real facts...in particular, the utter impracticability of moving the operations. There is a seven-unit printing press for the newspapers in the basement of the Wilcox Building, and this has significant implications. 1

⇨It would cost a minimum of $300,000 to move the press. Once it were dismantled and reassembled, it is highly likely that its functionality would be severely impaired.

⇨There are few buildings at which a press could be installed due to stringent EPA requirements, exacting foundation requirements, extensive power requirements, and the need for access for newsprint delivery. It is unlikely that a location could be found near the Civic Center. The Metropolitan News Company would lose its competitive advantage of being close to the courthouse, where it processes legal notices.

⇨Most significantly, a move would in all probability spell a crippling of the company's ability to derive revenues from legal advertising, which is its primary source of income, and this would thus mean the death of the company and its newspapers. This involves legal complexities, and cannot be explained in a single sentence. The process of taking the press apart and putting it back together again could not possibly be accomplished over a weekend; an entire week would be closer to reality. Yet, the Metropolitan News-Enterprise and the Los Angeles Bulletin are five-day-a-week publications. Unless the Metropolitan News Company had a new press already installed at a new location—a million-dollar-plus proposition—being displaced from its quarters and relocating its equipment, including the press, would entail suspending publication of its newspapers for several days. If it did that, the newspapers would be vulnerable to a court challenge, by a competitor, to their continued entitlement to carry legal notices. This is because a newspaper, to be able to carry such notices, must have a court adjudication, which requires meeting certain criteria set forth in the Government Code. One criterion is

1. "Regional Connector Transit Corridor Displacement and Relocation Technical memorandum," Page 35.
2. Other businesses with space in the building which would impacted. to the detriment of the businesses and their employees and families are Southland Credit Union, The Blue Cube restaurant, City Employees Assn., and 2nd Street Cigars & Gallery.

being published at "regular intervals." (Government Code §6000). Cessation of publication for several days would mean that the adjudications of the Metropolitan News-Enterprise and the Los Angeles Bulletin, as well as other company newspapers, could be yanked, meaning financial wreckage of the company. To requalify for adjudications, the newspapers would, under §6000, have to published for one year —a year without meaningful revenue. Assuming they could endure for a revenue-dry year—which is *not* conceivable—the Metropolitan News-Enterprise, as a newly adjudicated newspaper, would lose its prized standing as a newspaper that has been eligible to carry legal notices since 1923. It would thus be stripped of its privilege under a statutory "grandfather clause" (Government Code §6006) which presently entitles it, as a pre-1923 newspaper, to be printed outside of the city in which it is published. This loss of grandfathered status would greatly diminish the newspaper's fair market value should its sale ever be contemplated.

2.) The recommendation is based on a report which fails to take into account the historical character of the Wilcox Building, opened in 1896.

- The very space occupied by the Metropolitan News Company (208-210 S. Spring Street) was originally the premises (from 1896-1924) of H. Jevne Company, the premier grocery store in the western United States. Patrons would come in by train from other western states and pick out six months' worth of goods, and the purchased items would be shipped by rail. The store advertised in newspapers in Arizona and elsewhere.

1 cont'd

- Previous historical occupants of the building have included the still-existing and prominent Southwestern University School of Law, the law firm Graves, O'Melveny & Shankland (now known as O'Melveny & Myers), a highly influential civic betterment group then known as the Merchant & Manufacturers Assn. (still in existence as the Employers Group), First National Bank of Los Angeles (its space now occupied by a new form of a bank, a credit union), and numerous luminaries in the legal profession including Joseph Scott, memorialized in a statue in front of the main courthouse, Isidor Dockweiler, who has a county beach named after him, and former District Attorney and later multi-term member of the U.S. House of Representatives James McLachlan.

3.) There is no actual need to buy and raze a history-filled 1896 structure to make room for a parking lot in light of existing vacant property and parking lots in close proximity.

- These locations (depicted in color photographs in the attached booklet) include:

  ⇨Vacant block between Second Street and First Streets, Boardway and Hill Streets (owned by the federal government and unused);
  ⇨Parking lot at 230 S. Spring Street stretching to Broadway;
  ⇨Parking lot at northeast corner of Spring and Third Streets;
  ⇨Parking lot at 252 S. Main Street;
  ⇨Parking Lot at 282 S. Hill St.;
  ⇨Parking lot at 214 S. Broadway:
  ⇨Parking lot at southeast corner of Third and Main Streets;
  ⇨Parking lot at southeast corner of Second and Los Angeles Streets;
  ⇨Parking lot at northwest corner of Second Street and Broadway;

⇨Vacant lot First Street, from Spring Street to Broadway (formerly the site of the state office building);
⇨Parking lot east side of Main Street between Second and Third Streets.

● There is a vague allusion in the report to the possibility of "optional station entrances locations" on our property. To demolish historic buildings on the mere chance that someone would later decide to put an escalator there to an underground depot defies reason. Access could be gained from the lawn of the new LAPD Building, the vacant lot at the northwest corner of Second and Broadway, from the bottom floor of the Los Angeles Times' multi-story parking lot to the south of the proposed depot, or from the southern portion of the Olender Building (212 S. Spring Street) through a minimal partial taking or leasehold.

● The MTA staff knows that 208-210 S. Spring Street is occupied by a newspaper publishing company, *not a restaurant*, contrary to what is stated in the report. Two meetings were held with the MTA staff—on March 23, 2010, and April 28, 2010. Jo-Ann W. Grace, represented herself and Roger M. Grace, as owners of the property, and additionally represented the Metropolitan News Company, of which she is president, with the company also being represented by Vahn C. Babigian, our general manager. The project manager subsequently advised Jo-Ann Grace by telephone that the needs and concerns that had been expressed were appreciated and would be accommodated. Yet, the report, dated March 19, 2010, and released on Sept. 3, includes as an alternative the taking of the Wilcox and Olender buildings, with no acknowledgement that a newspaper publishing company, and its printing press, are on the premises; that one of the newspapers was established in 1901; and that the buildings—which are not even lent the dignity of their names being reflected—have enormous historic value. (The names of the buildings were made known to the MTA at the meetings.) 1 cont'd

● The total area occupied by the newspaper is approximately 33,822 square feet (including basement, main floor and mezzanine). See photo in booklet.

4. The improvident inclusion of the Wilcox Building and the Olender Building in the report as structures to be demolished is causing and will cause irreparable injury to the owners.

● The report, as it affects the Grace-owned properties, is defective. It is a clear fact, not opinion, that the Metropolitan News Company is not a restaurant; it putsa out newspapers. The report does not take into cognizance the historic value of the buildings.

● Yet, based on patently erroneous assumptions of fact, the MTA, in its plan for a subway system, marks the properties as to-be condemned. Legally, this fact must be communicated to prospective tenants. No prospective tenant would enter into a 10-year lease, with obligations of making improvements, if advised that the government was planning to seize the property.

● The space at 218 S. Spring Street, previously occupied by a private company, is presently being used by the Metropolitan News Company while its space at 210 S. Spring Street is undergoing recarpeting and restoration. That will take just a few months. Once completed, the space at 218 S. Street will be, as a practical matter, unrentable in light of the plan—on

the Internet and in printed form, and which the Graces would be legally obliged to disclose—for a government demolition of the premises. The same applies to other unrented space in the two buildings.

- This is a time when newspapers across the nation are faring poorly. The parent company of this county's largest newspaper, the Los Angeles Times, is in bankruptcy. Likewise with the parent of the Daily News and its affiliated newspapers, including the Long Beach Press-Telegram, Pasadena Star-News, Whittier Daily News, Torrance Daily Breeze, and San Gabriel Valley Tribune. In this economy, the rental income periodically is necessary to redirect cash to maintaining the existence of the newspapers. This cannot occur if the rental income is dried up by virtue of the MTA rendering the spaces unrentable by publicly representing that they about to be seized and demolished.

- The refusal of MTA to remove the Grace-owned properties from the endangered list, notwithstanding actual knowledge that the placement there was by virtue of mistaken concepts, constitutes an unreasonable governmental action, and prompt rectification is imperative.

Los Angeles, CA 90012

Re: Wilcox Building (APN 5149007006)
Olender Building (APN 5149007005)

Dear Ms. Saltarelli:

This is to protest the proposed taking of the historic Wilcox Building, at 200-210 South Spring Street, and the Olender Building, at 212-218 S. Spring Street, as part of a possible Second Street underground rapid transit project. My wife, Jo-Ann W. Grace, and I are owners of those properties.

It is my understanding that an underground rail system is contemplated, with a subterranean depot placed in the area boarded by Broadway on the west, Second Street on the east, Spring Street on the north, and the Times parking structure on the south. Under the plan, our land at the southeast corner of Second and Spring Streets would be confiscated and the historic structures upon that land would be razed in order to provide parking for construction vehicles and equipment. The ultimate disposition intended to be made of our land (at a commercially desirable location) is not revealed.

I bring to your attention that information concerning the 1896 Wilcox Building, as well as the Olender Building, as contained in the "Regional Connector Transit Corridor Displacement and Relocation Technical Memorandum," is wholly inaccurate. The gross misimpressions generated by the report flaw it, necessitating that it be withdrawn—including its removal from the Internet—and reissued only after being corrected. In the course of making, and considering, the corrections, the infeasibility of the present proposal to raze our buildings and use the space for temporary parking should become manifest.

The report sets forth at Page 35, with respect to the Wilcox Building:

"This parcel is occupied by a commercial structure that includes five businesses. The businesses located in this parcel include two restaurants, a cigar shop, a credit union, and the City Employees Club....[A taking] would result in no significant adverse impact related to job loss."

The businesses located in this parcel include *one* restaurant, a cigar shop, a credit union, and the City Employees Club. Not mentioned in the report is the primary occupant of the building, at 208-

210 S. Spring Street: the Metropolitan News Company (owned by my wife and myself), which publishes eight California newspapers, including its flagship publication, the *Metropolitan News-Enterprise*, founded in 1901.

The company has its printing press in the basement. It would cost in the hundreds of thousands of dollars to move the press and, after being dissembled and jostled, it is likely that its functionality would be diminished. Locations where it would be possible to secure approval for installation of the press would be severely limited, in light of EPA requirements. Propinquity of the operations to the Civic Center is essential not only for news-gathering purposes, but the processing of legal notices at the Mosk Courthouse. Viable alternative sites might not exist. The present proposal is life-threatening to the company, thus to its newspapers, and to the jobs of its employees. (The report mentions a total of 40 persons being employed by all businesses in the building. The Metropolitan News Company, alone, employs a number greater than 40.)

Too, a building would be demolished that is part of the history of Los Angeles County. In the very space occupied by the Metropolitan News Company, there was from 1896-1914, the premier grocery store on the west coast, owned by Hans Jevne, a civic leader. Persons came by train from the various western states to stock up on goods, which were sent to them by rail.

Among the original tenants were 13 lawyers, one of whom, Joseph Scott, is depicted in the form of a statue in front of the Mosk Courthouse, and another, Isidor Dockweiler, has a county beach named after him. Although the upper stories were removed in 1971 after an earthquake, the bottom floor, mezzanine, and basement remain. The credit union, in essence a bank, is in the very space occupied by the First National Bank of Los Angeles (which later became Security Pacific) from 1901 to Oct. 19, 1929.

Where cigars are now being sold, at 124 West Second Street, steam ship tickets were sold 114 years ago. The building was the home of the California Club, Southwestern University (now Southwestern Law School), and the law firm of Graves, O'Melveny & Shankland (now O'Melveny & Myers).

The Olender Building is likewise an historic Los Angeles structure (and is not vacant).

The MTA knows that 208-210 S. Spring Street is occupied by a newspaper publishing company, *not a restaurant*. Two meetings were held with the MTA staff—on March 23, 2010, and April 28, 2010. My wife, Jo-Ann Grace, represented herself and me, as owners of the property, and represented the Metropolitan News Company, of which she is president, with the company also being represented by Vahn C. Babigian, our general manager.

You subsequently advised my wife that our needs and concerns are appreciated and would be accommodated.

Yet, the report, dated March 19, 2010, and released on Sept. 3, includes as an alternative the confiscation of our buildings, with no acknowledgement that a newspaper publishing company, and its printing press, are on the premises; that one of the newspapers was established in 1901; and that

the buildings—which are not even lent the dignity of their names being reflected—have enormous historic value. (The names of the buildings were made known to the MTA at the meetings.)

Parking space is available for vehicles and equipment without raising muti-million dollar structures. There are parking lots close by. It might even be possible to lease space in them, rather than using powers of condemnation. There exist:

- A multi-level public parking lot on Spring Street, immediately to the south of our buildings (east side), with additional street-level parking south of there, to the end of the block, with some parking in a lot across the street (west side of Spring Street, extending to Broadway).
- Massive public lots behind our buildings (east of them, extending south of them), across from the LAPD parking on Main Street.
- A block-long parking lot south of the Kyoto Grand Hotel, on Second Street, bounded by Los Angeles Street on the West and San Pedro on the east.
- An empty, excavated lot between Second and First Streets, bounded on the east by Broadway and the west by Hill Street.

There is a vague allusion in the "Displacement and Relocation Technical Memorandum" to the *possibility* of "optional station entrances locations" on our property. To demolish historic buildings on the mere chance that someone would later decide to put an escalator there to an underground depot defies reason. Access could be gained from the lawn of the new LAPD Building, the vacant lot at the northwest corner of Second and Broadway, from the bottom floor of the Los Angeles Times' multi-story parking lot, or from our site through a minimal *partial* taking or leasehold.

It truly does not make sense to raze historic structures when land devoid of structures is located nearby—and, with respect to the vacant land at Second and Broadway, is as close to the site of the proposed depot (Second Street between Broadway and Spring Street) as we are.

With respect to a possible transit system that is above-ground, the closing of Second Street to traffic would preclude the delivery to our premises of newsprint. Delivery is made at the rear of our building from Harlem Place which, though officially a street, has the appearance of an alley. It's one-way, with entry on Third Street and exiting on Second. A truck carrying such loads could not back up for an entire block to Third Street. Without newsprint, a newspaper cannot be printed.

As a first step, I ask that the "Regional Connector Transit Corridor Displacement and Relocation Technical Memorandum" be withdrawn, and that it be redrafted, with attention lent to the matters discussed above. I would hope that in light of these considerations, an alternative location be chosen for an area on which to park vehicles and equipment.

Yours truly,

/s/

REMINISCING (Column)
By ROGER M. GRACE

Norwegian Immigrant Operates Premier L.A. Grocery Store

Supreme among grocery stores west of the Mississippi a century ago was H. Jevne's. It was located right here, where I'm now plunking out this column, at 210 S. Spring Street…the location since 1990 of Metropolitan News Company offices.

I have no idea what was being sold at this spot where my desk and PC are now. Caviar? Wines? Laundry soap? Cheeses? Perfumes? Mops? Candles?

Jevne had them all. Here's an ad which appeared 100 years ago today in the Los Angeles Times featuring smoked bloaters:

H. JEVNE CO.

Fancy Smoked Fish

An appetizing suggestion for Friday's luncheon—Jevne's fancy smoked bloaters. Sweet, tender, of fine flavor and smoked to perfection. Also tempting smoked halibut, in packages and strips; delicious smoked salmon and many other kinds of fancy smoked and salted fish.

Jevne's smoked fish are not the ordinary fish, smoked in the ordinary way. They are the choicest fish procurable, skillfully cured and smoked to retain and develop all their rich flavors.

Phone Your Fish Orders to Jevne's NOW.

SMOKE JEVNE'S FINE CIGARS

208-210 S. SPRING STREET—WILCOX BUILDING

Aside from Jevne ads appearing in the local dailies, they were to be found in out-of-state newspapers. Residents elsewhere were urged to send away for a free catalog and place their orders for shipping, or take the train to L.A. to stock up on merchandise.

"Buy Groceries in Los Angeles." That was the heading on a June 18, 1901 Jevne ad published in the Arizona Republic, which continues:

"Go to Jevne's for hundreds of dainty delicacies that no other grocery store in the Pacific southwest carries....Make a list before you leave on a trip to the coast."

A July 17, 1901 ad in the same newspaper advises:

"Free writing and waiting room at Jevne's in Los Angeles. Have your mail addressed in our care. Come to us for any information you wish. Use us in any way you can. We're always glad to make strangers welcome no matter if you wish to buy groceries, wines or cigars of us or not…."

I don't recall seeing any such an invitation in recent Ralphs, Vons or Albertson's ads.

"Buy enough [groceries] to last six months or a year," an Aug. 8, 1901 ad in the Arizona newspaper suggests.

A steadily growing number of H. Jevne products, such as Jevne Coffee, La Crescenta Olive Oil, and Pot o' Gold Oranges, were available in the early 1900s in grocery stores in Southern California, Arizona, and New Mexico.

The proprietor of H. Jevne Co. was Hans Jevne, born Feb. 28, 1849 in Hamar, Norway. On Oct. 18, 1866, he and his brother Carl came to Chicago to go to work for their older brother, who ran a Norwegian food market. Odd S. Lovoll, in his 1999 book, "The Promise Fulfilled: A Portrait of Norwegian-Americans Today," makes mention of that establishment:

"Norwegian food items were offered to the Norwegian community at immigrant retail stores, such as the one opened in 1865 by the young Christian H. Jevne. Jevne expanded to become a large wholesale and import concern, importing cheese, fish, canned

goods, and aquavit directly from Norway."

Operations expanded, and the store came to serve the populace at large. The first electric light in Chicago is said to have been installed there in 1880, and the store utilized two novel devices: an electric coffee bean roaster and an electric coffee mill.

Hans Jevne worked "first as salesman and afterward as manager in his brother's mammoth establishment, for seventeen years—with but ten days' vacation," according to "Illustrated history of Los Angeles County, California," published in 1889. In that capacity, the book notes, Jevne became a "master of the grocery trade in every detail."

Moving with his wife and 7-year old son to the West Coast in February 1882, for sake of his wife's health, and to Los Angeles the following November, Jevne opened a small shop on North Spring Street, soon shifting to a larger space nearby, and in 1896 relocating to the recently opened Wilcox Building at South Spring and Second Streets. The southern portion of the building where Jevne had his store, and where we now have our offices, was, prior to erection of the building, site of the Empire Livery Stable.

"A History of the Norwegians of Illinois," published in 1905, says that Jevne, as a Los Angeleno, "has grown up, so to speak, with the town, has prospered, and now owns one of the largest as well as the best equipped stores in the country."

There will be more about Jevne next week.

Jevne: Retail Grocer, Wholesaler, Bank Director, Civic Leader

When Norwegian immigrant Hans Jevne first opened up shop in downtown Los Angeles in November 1882, in a small space now within the confines of City Hall, selling groceries to members of the public was his only pursuit. As his business expanded, as he became an "American success story"—to use a once hackneyed and now arcane phrase—his interests multiplied…though his primary and most visible role remained that of a retail grocer.

Jevne "was always on the main floor" of his store, "giving a kind smile and a glad hand of welcome to all who entered his door," Herman W. Frank writes in "Scrapbook of a Western Pioneer," published in 1934. But Frank (a founder of Harris & Frank clothiers) goes on to point to another side of Jevne, saying he was "the type of man with a civic spirit that helped build Los Angeles and the Los Angeles Chamber of Commerce."

Jevne was one of the organizers of the Chamber of Commerce in 1888, a time when the city was experiencing a drastic decrease in population…set then at about 50,000, down from 70,000 in 1880. Among of the group's early efforts was that of seeking to lure mid-west and southern farmers here by means of an exhibition dubbed "California on Wheels," located in a railway car. The car traveled through the farm regions over a two-year period, displaying agricultural products of this state.

As a civic leader, Jevne pushed for causes—such as adoption of a city charter and construction of a deep water harbor in San Pedro—but didn't care to involve himself in partisan politics.

His business interests were varied. The one that went hand-in-hand with the retail grocery operation was his wholesale venture which encompassed the manufacturing of his own brands of products, including Pot 'O' Gold oranges. He produced La Crescenta brand olive oil and was involved in quite a different sort of oil as a director of Western Union Oil Co. and Edmonds Midway Oil Co.

Many of his activities were conducted in the Wilcox Building, at Second and Spring streets. The building was opened in 1896, and Jevne had the space on the first floor at the south end of it (where, as I've noted, this newspaper now has its offices).

On the evening of July 20, 1896—one week before H. Jevne Company opened its new store there—the Merchants and Manufacturers Assn. dedicated its offices in the building and celebrated the formation of its organization, an amalgamation of two existing groups. Jevne had been active in the Merchants' Association, serving on the Executive Committee, and was to be a key player in the fused alliance. He continued to play a major role in the staging of the annual Fiesta de Los Angeles which brought money into the city and was a leader of the group's opposition to an occupational license tax.

On the fifth floor was the California Club, of which Jevne was a charter member, a place where business was transacted over brandy and cigars. The first-floor corner space came to be occupied in 1901 by First National Bank of Los Angeles, of which Jevne was a director.

(Among the other directors of the bank were real estate investor Henry Huntington, who owned much of the county's electric railway system; Walter J. Trask, a founder of the law firm that became Gibson, Dunn & Crutcher and who was to serve as Los

Angeles Bar Assn. president in 1910; C.H. Sessions whose 400-acre dairy ranch adopted the maiden name of his wife, Lynne Wood, with the land later becoming the City of Lynwood; and Jared S. Torrance who was to found the City of Torrance.)

"He was not only one of the city's most substantial business men," the 1932 book "California and Californians" says of Jevne, "but a citizen who took a keen and intelligent interest in the affairs of his community."

Harris Newmark—a leading merchant, a founder of Montebello, and an organizer of the Los Angeles Public Library—says in his 1916 book, "Sixty Years in Southern California," that "Jevne, since his advent here, has been identified with the most important steps in the evolution of the city."

Copyright 2007, Metropolitan News Company

H. JEVNE.

One of the show features of Los Angeles, to which the resident proudly conducts his guest from the East, is the grocery store of H. Jevne in the Wilcox block on Spring street.

Until recently it could be said, without question, to be the most beautiful and the most perfectly equipped store of that description in the United States. It was so acknowledged by writers in grocery and other trade journals, and by newspaper correspondents who visited the city. Lately one or two others have been designed that may be compared with it, but which do not surpass it.

This store is a monument to the industry, sagacity, and good taste of the

man who built up the business which it harbors. Hans Jevne was born in the great northern peninsula of Europe which has sent to this country so many thousand progressive and successful men. He began the grocery business with his brother, C. Jevne, in Chicago, in 1866, and the splendid success which the great house of C. Jevne & Co. has enjoyed in the metropolis of the Middle West has been reproduced in a degree in the Los Angeles establishment, which bears a similar name but is independent of the other.

H. Jevne came to Los Angeles in 1882, several years before the great "Boom". The store was originally located at 138 North Spring, and in a short time it came to be the leading retail grocery business in Los Angeles and presently included number 136 as well. In 1896 Mr. Jevne moved into the Wilcox block, in the store room 45x160 feet, which was especially designed for his use. The furnishings, which are in polished hardwood, wrought iron and plate glass, were planned throughout by Mr. Jevne himself, and are perfect in their adaptation to the needs of the business, while they are at the same time striking and beautiful in appearance.

In the extent, variety and high grade of excellence of its stock, there are few stores in the United States to be compared with this, a fact which is an evidence not only of the progressiveness of the owner of the business, but also of the select character of the population of Los Angeles which demands goods of this character.

Mr. Jevne does a considerable amount of wholesale business, and has assisted to develop many California products and to push them in the Eastern market. A striking example of the latter is his pure olive oil "La Cresenta," which is making its way all over the country.

Mr. Jevne was for many years a director of the Chamber of Commerce and was one of its founders.

A history of the Chamber of Commerce of Los Angeles, CA: *from its foundation, September, 1888, to the year 1900, Kingsley-Barnes & Neuner, 1899*

Response to Comment BU24-1

The Metro Board of Directors voted on October 28, 2010 to remove the Wilcox and Olender Buildings (APNs 5149-007-006 and 5149-007-005) from consideration as acquisitions for the Regional Connector project. Only a subsurface easement beneath APN 5149-007-006 would be required for construction of the Locally Preferred Alternative.

Subject: Arts District chooses fully underground option

I have been asked to represent LARABA and LaDADspace on this process.We think that the fully underground option provides the most efficient way to maxaimize the whole light rail system. 1

Another potential exists as we develop the station.We can build out a community art center above,with Theaters,Galleries and music venues,that could anchor a rennasance of the arts in downtown. 2
We are committed to the unlimited potential that this project can provide to advance the cultural life of Los Angeles.
Thank You,Tim Keating,LARABA,LaDADspace,HCNC

Response to Comment BU25-1

Thank you for your comment. Support for the Fully Underground LRT Alternative is noted. The Metro Board of Directors voted on October 28, 2010 to designate the Fully Underground LRT Alternative as the Locally Preferred Alternative.

Response to Comment BU25-2

Comment acknowledged. Metro looks forward to helping the community explore potential transit oriented development (TOD) opportunities on this parcel and other parcels along the alignment. These separate possible future developments have potential to advance cultural life in Los Angeles.

Dear Metro,

I own the oldest business in Little Tokyo, which was started in 1903 by my Grandfather. My store's name is Fugetsu-do Confectionery at 315 E. First st. LA, Ca.90012.
My family has been thur 107 years of history in Little Tokyo. We have see the great depression, evacuation of Japanese American in 1941, and the worst that I saw, was the redevelopment in Little Tokyo in the 1980s.

This business community has struggled for the last 17 years, after the redevelopment. Our mom and pop friendly shops and the communities closeness was almost destroyed thru the use of emanate domain by the city. Your new proposal has construction down 2nd st. and removing an entire block in little Tokyo. This is not going to be a plus for the businesses here. The block in question has been owned by the Volk family for over 125 years. Mr., Bob Volk is currently the owner and has no wish to have his property taken, unless it is for the good of the community. I think the block is too big of a sacrifice for the connection. We will loss parking spaces, historic buildings, and an area of business mix that has served as a entry point for the local residence that reside just east and south of LT. 1

My major point is as follow.

1) Moving the connection down **Temple Street** is a much easier path. It is bound by mostly governmental buildings. Temple has an empty lot on Temple and on Alameda. The only problem seems to be a misplaced, but important, Japanese American veteran's monument. I think the monument should be moved to the corner of 1st and John Aiso st. It could sit <u>proudly</u> on top of the new underground parking lot and photos could be taken with the City Hall behind it. There it can get the respect it deserves. 2
2) Move the Go For Broke Monument. To First and Judge John Aiso st. (above the underground parking. 3
3) Reclaim property north of MOCA to locate the station. 4
4) Make a seamless connection going to union station only. People continuing on the gold line will have to cross the street to connect to the gold line east. 5
5) Take the line to union station above ground elevated over Alameda. 6
6) It does not make any sense to sacrifice any business and to disturb any others, when the alternative affects none on Temple Street. Let not forget who generates the tax dollars. <u>It is not the non profits</u>. 7
7) Our Community Council is run mostly by Non profits. I am the one that voted no to the alternative down 2nd street. I think that most businesses agree with my point of view. Many businesses will not be able to survive the construction period. Nor do I want to see Business and nonprofit fight over this. For both need each other to form Little Tokyo. 8
8) Please do not consider the route down 2nd st and reevaluate the temple street alternative. The Go For Broke monument should be in a better place anyway.It may not be popular with the vets in the beginning, but if metro can pay to relocate it, I think everyone would be happy in the end. Win! Win! Win! Can you ask for any thing more????????????? 9

Sincerely Yours.
Brian Kito

BU26

Responses to Comments from Fugetsu-do Confectionery, Kito, Brian

Response to Comment BU26-1

Metro has made refinements to the Locally Preferred Alternative in response to community input. The refinements would greatly reduce impacts to businesses. The refined alternative would not involve cut and cover construction on 2nd Street, and would minimize acquisitions on the block bounded by 1st Street, Central Avenue, 2nd Street, and Alameda Street. The majority of parking spaces and businesses on this block would not need to be acquired. Metro believes that the community will benefit from the Regional Connector once it is in place, and will minimize construction-related impacts to the extent feasible. It is Metro's goal to work with the community and assist businesses through the construction process. Impacts associated with off-street parking loss and property acquisition are analyzed in Section 4.2.3.5 of the Draft EIS/EIR, the Supplemental EA/Recirculated Draft EIR Sections, and this Final EIS/EIR. Potential impacts to historic structures were analyzed in Section 4.12.1.3.5 of the Draft EIS/EIR.

Response to Comment BU26-2

At the beginning of the Alternatives Analysis study, an initial set of 36 conceptual alternatives was developed, which included several alternatives with alignments along Temple Street. Based on input from stakeholders, agencies, and interested members of the public, the initial set of conceptual alternatives was narrowed to eight. An LRT alternative along Temple Street was one of the eight alternatives considered during the initial screening for the Regional Connector project in the Draft Initial Screening of Alternatives Report (April 2008). The eight alternatives were screened using the goals, objectives, and evaluation criteria established for the project. These eight alternatives were compared using a multi-criteria comparison method model. Overall, the Temple Street alternative did not achieve the Regional Connector project goals and objectives as well as the other alternatives studied during the initial screening. For example, the Temple Street alternative had a smaller population size within a quarter mile of all stations (including households within a quarter mile), a low opportunity for transit oriented design, less direct connections to key activity centers, and less community acceptance compared to the other alternatives studied during the initial screening. Therefore, the Temple Street alternative was not recommended for further analysis in the Draft EIS/EIR.

Response to Comment BU26-3

The Locally Preferred Alternative would not impact the Go For Broke Monument and, therefore, relocation of the monument would not be required. Relocation of the monument is outside the scope of this project.

Response to Comment BU26-4

Please refer to Response to Comment BU26-2, above. Based on the findings contained in the Final Alternatives Analysis Report, the Temple Street alternative was not recommended for further analysis in the Draft EIS/EIR. The property north of MOCA is not necessary for any of the stations under the Locally Preferred Alternative and, therefore, would not be acquired.

Response to Comment BU26-5

The commenter's alignment preference is noted. The Regional Connector Locally Preferred Alternative would include a seamless connection to Union Station via the north-south route (Montclair to Long Beach Transit Mall). Passengers at Regional Connector stations would be able to reach Union Station without transferring. An east-west route (I-605 to Santa Monica) would also be created using the new Regional Connector Transit Corridor tracks.

Response to Comment BU26-6

The commenter's design preference is noted. The Metro Board of Directors voted on October 28, 2010 to designate the Fully Underground LRT Alternative as the Locally Preferred Alternative. The Fully Underground LRT Alternative has been designed to travel underground, beneath Alameda Street.

Response to Comment BU26-7

Metro has made refinements to the Locally Preferred Alternative to reduce impacts to businesses, and will implement the mitigation measures shown in the Mitigation Monitoring and Reporting Program for the Locally Preferred Alternative (Chapter 8) of this Final EIS/EIR to ensure assistance is provided for affected businesses throughout the construction phase of the project. A worst-case scenario list of businesses that would be acquired was shown in Section 4.2.3.5 of the Draft EIS/EIR, and some of these businesses would no longer need to be acquired due to refinements made to the Locally Preferred Alternative as shown in Section 4.2.3.5 of the Supplemental EA/Recirculated Draft EIR Sections and this Final EIS/EIR. An alignment on Temple Street would affect the property containing the Go For Broke Monument, including an existing parking lot business. It is Metro's goal to minimize impacts to businesses and non-profit organizations alike.

Response to Comment BU26-8

Metro intends to work collaboratively with businesses and non-profits alike for the duration of the Regional Connector project. Metro acknowledges the disproportionate adverse impacts that Regional Connector construction would have in Little Tokyo, and addresses them in the Mitigation Monitoring and Reporting Program for the Locally Preferred Alternative (Chapter 8) of this Final EIS/EIR. Metro has been working closely with the Little Tokyo community since the outset of the Alternatives Analysis process in October 2007. Metro staff have performed extensive outreach measures, as documented in Chapter 7, Public and Agency Outreach, of the Draft EIS/EIR and this Final EIS/EIR, including numerous public meetings, Japanese and Korean language interpretations, and door-to-door visits with business owners to provide information about the project and gather input. Metro will enact the measures listed in the Mitigation Monitoring and Reporting Program for the Locally Preferred Alternative to minimize impacts to businesses and cultural resources, and help them remain intact throughout the construction process. As described in Chapter 2, Alternatives Considered, and Section 4.18, Construction Impacts, of this Final EIS/EIR, since publication of the Draft EIS/EIR, alignment refinements have been made to reduce construction impacts in Little Tokyo, reduce the amount of cut and cover activities, and reduce the extent of acquisitions needed on the block bounded by 1st Street, Central Avenue, 2nd Street, and Alameda Street. These alignment refinements have also eliminated the need for cut and cover construction on 2nd Street in Little Tokyo, resulting in greatly reduced impacts for 2nd Street businesses.

Response to Comment BU26-9

Japanese Village Plaza LLC is the owner of Japanese Village Plaza which will be drastically affected by the construction of this project. Our tenants and property will be severely impacted during this time and we wish to express support for the following:

1 – Fully underground system.
2 – Preservation of Japanese business influence and culture.
3 – Business interruption funds for tenants and property owners.
4 – Replacement of On-street and Off-street parking.

1

Thank you.

Jim Smith

BU27

Responses to Comments from Japanese Village Plaza, Smith, Jim

Response to Comment BU27-1

Support for a fully underground system is noted. The Metro Board of Directors voted on October 28, 2010 to designate the Fully Underground LRT Alternative as the Locally Preferred Alternative.

Metro recognizes the significance of Little Tokyo to Japanese Americans nationwide, and expressed the community's importance in Section 4.17.2 of the Draft EIS/EIR and this Final EIS/EIR. Metro acknowledges the disproportionate adverse impacts that Regional Connector construction would have in Little Tokyo, and addresses them in the Mitigation Monitoring and Reporting Program for the Locally Preferred Alternative (Chapter 8) of this Final EIS/EIR. Metro has been working closely with the Little Tokyo community since the outset of the Alternatives Analysis process in October 2007. Metro staff have performed extensive outreach measures, as documented in Chapter 7, Public and Agency Outreach, of the Draft EIS/EIR and this Final EIS/EIR, including numerous public meetings, Japanese and Korean language interpretations, and door-to-door visits with business owners to provide information about the project and gather input. Metro will enact the measures listed in the Mitigation Monitoring and Reporting Program for the Locally Preferred Alternative to minimize impacts to businesses, and will coordinate activities with the community throughout the construction process. As described in Chapter 2, Alternatives Considered, and Section 4.18, Construction Impacts, of this Final EIS/EIR, since publication of the Draft EIS/EIR, alignment refinements have been made to reduce construction impacts in Little Tokyo, reduce the amount of cut and cover activities, and reduce the extent of acquisitions needed on the block bounded by 1st Street, Central Avenue, 2nd Street, and Alameda Street. These refinements would reduce construction impacts near the Japanese Village Plaza by eliminating the need for cut and cover activities on 2nd Street in Little Tokyo. It is Metro's goal to help preserve the Little Tokyo community and its businesses during construction. Metro will continue to meet with the community for the duration of the project.

It is Metro's goal to minimize adverse impacts to the Little Tokyo community, including impacts to businesses. Metro will implement the mitigation measures proposed by the Little Tokyo Community Council and Little Tokyo Business Improvement District/Little Tokyo Business Association regarding business interruption shown in the Mitigation Monitoring and Reporting Program (Chapter 8) of this Final EIS/EIR. Metro will work with the Regional Connector Community Leadership Council to serve all businesses affected by Regional Connector construction.

Metro understands the impacts that construction would have in the Little Tokyo community, and will work with the community to minimize impacts to businesses. During construction, Metro will minimize lane and sidewalk closures, and will provide adequate detours to maintain pedestrian flow. Temporary replacement parking will be provided during construction as needed to offset the impact of on-street and off-street parking removal. As part of temporary replacement parking efforts, Metro will provide two acres of land on the Mangrove property, located at the northeast corner of 1st and Alameda Streets, for the purposes of providing supplemental parking services, such as valet parking services during construction. Please refer to the Transportation Impacts and Environmental Justice sections of Chapter 8, Mitigation

Monitoring and Reporting Program for the Locally Preferred Alternative, for more information regarding construction mitigation measures.

Re: *Comments on Draft EIS/EIR for Regional Connector Transit Corridor Project*

Dear Ms. Roybal-Saltarelli, Mr. Sukys and Mr. Tellis:

This letter is submitted by The Related Companies, L.P. and Grand Avenue L.A., LLC (collectively Related) and The Broad Collection (Broad). Broad is the developer of a museum (Museum) that will house and display to the public the art collection of The Broad Art Foundation to be located on Parcel L at Grand Avenue and 2nd Street in Downtown Los Angeles. Related is the developer of the future Grand Avenue Project, which is a large-scale mixed use project to be constructed on Parcels L, M-2, Q, W-1 and W-2 along Grand Avenue at 1st and 2nd Streets in Downtown. The Grand Avenue Project and Broad will share in the use of certain facilities, such as a subterranean parking garage to be located under Parcels L. In light of our common interests, Broad and Related jointly submit this letter commenting on the Draft EIS/EIR (DEIS/EIR) prepared for the Regional Connector Transit Corridor Project (Connector Project) by the Federal Transit Administration (FTA) and the Los Angeles County Metropolitan Transit Authority (MTA).

1

RELATED . 333 South Grand Avenue, Suite No. 4050 . Los Angeles, CA 90071 . (213) 984-4110 . (213) 625-1918 FAX

We appreciate the opportunity to comment on the DEIS/EIR since we support the Connector Project. The Project will provide enhanced connectivity and transit service for Downtown and the region. As immediate neighbors to the proposed station at 2nd and Hope Street, we look forward to collaborating with the FTA and MTA towards maximizing connectivity in, around and through our development sites to ensure a first rate experience for transit riders accessing Grand Avenue and its many attractions. 1 cont'd

However, we also wish to ensure that the construction and operation of the Connector Project will occur harmoniously with our properties and take into consideration the sensitivity of the uses contained in our project sites. The Broad Collection is anticipated to house more than $500 million of world class contemporary art, including a multitude of artworks that are extremely sensitive to vibrations and can be easily damaged. The remainder of Parcels L and M, as well as Parcels Q and W, will be developed with residential units, a hotel and a variety of retail and restaurant uses. Keeping in mind the need to preserve the valuable artwork in The Broad Collection, as well as the quality of life of the properties' future residents and users, we submit the following comments and recommendations for the design, construction and operation of the Connector Project. 2

First and foremost, we strongly recommend that the Connector Project be built in the public right of way. We maintain that the simplest way to avoid many of the potential conflicts with the Museum and the Grand Avenue Project is to keep the Connector Project in and under the public right of way. The conceptual drawings provided in the DEIS/EIR indicate significant subsurface encroachment under Parcel L, which has potential impacts to the Museum and the rest of development project to be constructed on that site.

Second, even if the Connector Project is sited in the public right of way, the design, construction and operation of the Project must take into account a variety of issues to ensure that no significant impacts will occur to the Museum or the Grand Avenue Project. For example, with respect to subsurface issues: 3

1. **The Connector Project must be designed and constructed to ensure that any noise or vibration will not adversely affect the Museum or the Grand Avenue Project**. Depending on the distance of the Connector Project to our sites and the vibration damping properties of the bedrock, our projects may experience vibrations due to the tunnel excavation and operation of subway trains.

2. **The Connector Project must be designed and constructed to support the load of the proposed development and not cause any additional structural impacts to the Museum or the Grand Avenue Project**. First, since the proposed tunnel will be located near the heavily loaded foundations for the Museum and Grand Avenue Project, the tunnel excavation and finish design will need to ensure it does not remove or negatively impact any vertical or lateral support needed for the foundations of the Museum and/or Grand Avenue Project. Also, although water was not encountered within 80 feet of the existing ground surface, water may occur at the depth of the proposed tunnels. In the course of tunneling, water may be rapidly removed, increasing the stress on the overlying geologic materials. An increase in stress may impact the foundation system of the Museum and/or Grand Avenue Project. 4

3. **The Connector Project must be designed and constructed to address possible methane deflection toward the Museum or the Grand Avenue Project.** The source of natural-occurring methane in the vicinity of these sites is an oil reservoir and other geologic traps found hundreds to thousands of feet below the ground surface. The methane rises to the ground surface through the rock's primary porosity and through secondary fractures. Considering the size of the tunnel, its proximity and the assumption that it will be sealed from methane seepage, methane that otherwise rise to the ground surface outside the limits of our sites may instead be deflected towards our sites. An increase in methane volume may overload the passive venting system currently required by the Los Angeles Building Code. 5

4. **The Connector Project must be designed and constructed to avoid power outages or interruptions in the area due to relocation of any underground utilities required by the Connector Project.** 6

(These issues are discussed in more detail in the attached letter from Geotechnologies Inc. dated October 2010.) 7

In addition to these subsurface issues, the Connector Project should also address construction management and logistical issues. For example: 8

5. The logistics plan for the proposed station indicates a construction staging zone that extends up GTK to Grand Avenue. This staging area could impact the construction of Related's plaza over GTK Way as well as ingress and egress to and from our properties.

6. Our sites may be adversely affected by traffic congestion and access impacts attributable to construction equipment, activities and trucking associated with the Connector Project. Accordingly, we will request that a detailed construction timeline be provided to us as soon as possible so we can anticipate any disruption to our operations. 9

Finally, as we said earlier, we believe that integration of the proposed station at 2nd and Hope Street with the Museum and Grand Avenue Project can greatly enhance the experience of the user. Accordingly: 10

7. The aesthetic and functional design of the station should be compatible with the Museum and the Grand Avenue Project. In that regard, we would appreciate more information about the visibility of the station toward Upper Grand.

8. We are also interested in the accessible path of travel from the station to Upper Grand since the DEIS/EIR does not identify such a path. There has been discussion of constructing an elevator to transport passengers from the tunnel to the surface, and we have concerns with the potential safety and unpleasant experience of such an elevator. Further, when considering pedestrian access from the station to Upper Grand Avenue, the agencies should consider the likelihood of a public plaza existing over GTK (adjacent to the Museum). 11

9. More details about the reconfiguration of streets in the vicinity of the station and any potential impacts to ingress and egress to and from our properties should be provided. Drawings in the DEIS/EIR appear to indicate that the traffic islands and portions of the streets in the vicinity of the station will be reconfigured to support the construction of a new station. 12

In reviewing the DEIS/EIR, it does not appear that the above issues and potential impacts are analyzed in sufficient detail to determine whether a significant impact may occur or to fashion specific mitigation measures that will ensure that no significant impacts will occur. Instead, the DEIS/EIR appears to rely on *future* studies that may address these potential impacts. (Refer, for example, to Section 4.9 in the DEIS/EIR, pages 4-135-4-148, which addresses geological impacts.) As we understand, neither CEQA nor NEPA permits reliance on such future studies as a basis for lead agencies to conclude that a project will not cause significant environmental impacts or to avoid imposing all necessary mitigation measures before approving the proposed project. 13

Accordingly, we suggest that FTA and MTA adopt a mitigation measure and condition of approval that establishes the following process: 14

A. The appropriate studies will be conducted with respect to the specific issues identified in Items 1 through 10, above, prior to construction.

B. Upon completion of each study, copies will be made available to the appropriate stakeholders and holders of property interests (include Broad and Related) in the Bunker Hill area for their review and comment. The FTA and MTA shall work with the stakeholders to resolve concerns raised in their comments. 15

C. Eventual approval or disapproval of a study by the FTA and MTA shall be structured to allow for an administrative appeal to the governing bodies for the FTA and MTA. 16

D. Further, to ensure effective and timely communication, we request that the FTA and MTA adopt a condition of approval that requires meetings with the relevant stakeholders (including Broad and Related) on a quarterly basis to discuss the progress of the Connector Project and its design and construction. 17

By establishing a process now to address any concerns that may arise when the specifics of the design and engineering of the Connector Project are provided in the future, the Connector Project will be able to fulfill its mission of enhancing regional connectivity, while promoting the variety of cultural and social interests in the Downtown area. We look forward to working with you on this important project. 18

Very truly yours,

WILLIAM A. WITTE

Subject: Commentary Regarding The Proposed MTA Subway
Proposed Broad Foundation Museum
221 South Grand Avenue, Los Angeles, California

References: *Report by Geotechnologies, Inc.:*
Geotechnical Engineering Investigation, dated April 9, 2010, revised April 28, 2010;
Addendum I, dated August 25, 2010.

Communications with the City of Los Angeles, Department of Building and Safety:
Soils Report Approval Letter, dated April 30, 2010, LOG # 70524;
Soils Report Approval Letter, dated September 28, 2010, LOG # 71827.

Ladies and Gentlemen:

This letter has been prepared at the request of Rob Pinkerton, Project Manager for the Broad Collection. It is the understanding of this firm the Metropolitan Transit Authority (MTA) is proposing a subway tunnel that will pass beneath the Second Street tunnel and may even be located under a portion of the proposed Museum. The tunnel will likely be constructed several years after the completion of the Museum. The purpose of this letter is to identify the potential geotechnical concerns that may arise as a result of the construction and operation of the tunnel.

19

The proposed tunnel will be excavated through siltstone bedrock of the Fernando Formation. Groundwater was not encountered within a depth of 80 feet below the ground surface during the geotechnical investigation. The proposed museum is located within a City of Los Angeles Methane Buffer Zone. The proposed structure will be supported on a mix of conventional spread footings and belled, end-bearing caissons. The caissons will extend no deeper than the Second Street Tunnel.

Based on this firm's experience with MTA subway, they are typically two separately-excavated tunnels that are 20 feet in diameter and are placed in a side-by-side or stacked configuration. The tunnels are excavated using a tunnel boring machine. The boring procedure entails advancing the machine a given distance, then inserting a concrete shell to support the tunnel walls. Grouting or cement injection is done on as-needed basis to fill voids or seal the geologic materials behind the concrete shell. After the tunnel is structurally complete, an inner liner is placed that effectively seals the tunnel from water and gas seepage. 19 cont'd

This firm anticipates that there will be several geotechnical issues that will affect the proposed Museum that should be addressed by the MTA during the design phase of the tunnel. The issues are as follows:

- Since the proposed tunnel will be located near the heavily loaded foundations for the museum, the tunnel excavation procedure and finish design may remove vertical and lateral support of the proposed foundations.

- The source of natural-occurring methane in the site vicinity is from an oil reservoir and other geologic traps found hundreds to thousands of feet below the ground surface. The methane rises to the ground surface through the rock's primary porosity and through secondary fractures. Considering the size of the tunnel, it's proximity, and the assumption that it will be sealed from methane seepage, methane that would otherwise the rise to the ground surface outside of the site limits may instead be deflected towards the site. An increase in methane volume may overload the passive venting system currently required by the Los Angeles Building Code. 20

- Depending on the distance to the site and the vibration damping properties of the bedrock, the proposed Museum may experience vibrations due to the tunnel excavation and operation of subway trains. 21

- Although water was not encountered within 80 feet of the existing ground surface, water may occur within the depth of the proposed tunnels. In the course of tunneling, the water may be rapidly removed, increasing the stress of the overlying geologic materials. The increase in stress may impact the foundation system of the proposed Museum. 22

Since any one of these issues may affect the integrity or serviceability of the proposed Museum, these issues are should be addressed as early in the design of the proposed structure and the tunnel design as possible. 23

Should you have any questions, please contact this office.

Respectfully submitted,
GEOTECHNOLOGIES, INC.

Responses to Comments from Related/Companies, L.P./Grand Avenue L.A., LLC/The Broad Collection, Witte, William A.; Broad, Eli

Response to Comment BU28-1

Thank you for your comment. Since this comment letter was submitted, Metro has held meetings with community groups, which included The Related Companies, L.P., Grand Avenue, LLC, and The Broad Collection, and identified municipal leaders to guide them in the decision-making process as it relates to the proposed station locations, alignment options, and anticipated mitigation measures. Metro looks forward to collaborating with The Related Companies, L.P., Grand Avenue, LLC, and The Broad Collection through the rest of the design phase and the construction phase of this project.

Response to Comment BU28-2

Metro will implement the mitigation measures shown in the Mitigation Monitoring and Reporting Program for the Locally Preferred Alternative (Chapter 8) of this Final EIS/EIR to ensure that no vibration impacts during construction or operation occur at the museum or the residential hotel structure. Metro has performed a geotechnical and vibration study, and concluded that no impacts to the museum and residential hotel structure would occur after mitigation. The geotechnical and vibration study paid close attention to the future museum, residential, and hotel structures, based partly on information provided during meetings with Related and Broad engineers, in order to reach this determination. The results of this study are presented in Section 4.7, Noise and Vibration, of the Supplemental EA/Recirculated Draft EIR Sections and this Final EIS/EIR. The alignment would provide operational benefits including higher train speeds, more efficient operations, and better access to Upper Grand Avenue for passengers. This station location would allow for a visible and effective connection to the Broad Art Foundation Museum, currently under construction. Metro looks forward to continuing coordination with Related throughout the design and construction process. The Metro Board of Directors voted on October 28, 2010 to designate the Fully Underground LRT Alternative as the Locally Preferred Alternative, which includes tunnels beneath the parcel in question.

Response to Comment BU28-3

Please refer to Response to Comment BU28-2, above.

Response to Comment BU28-4

The tunnel and stations will be designed and constructed to minimize the impact of the existing structures. A preliminary analysis of the impacts of the station excavation on the adjacent structures was performed. In the final design phase, additional analyses will be performed to confirm the prior analysis of stress from the museum/Grand Avenue project on the tunnel, to the extent information from those future developments is known. As part of the analysis, consideration will need to be made for the impact of groundwater changes due to construction. The tunnel excavations will be designed to minimize the impacts to groundwater levels. Final excavation methods will be confirmed with Related Companies and the Broad Foundation.

Response to Comment BU28-5

Previous explorations in the project area have not indicated the presence of methane. Additional sampling of soil gas will occur during the explorations as part of the final design phase. Since methane has not been detected, insignificant diversion of methane is anticipated due to the project construction and permanent structures. Both the tunnels and station facilities will be designed based on the requirement to minimize additional methane seepage to adjacent properties as a result of the Regional Connector construction. This effort will be coordinated with both Related Companies and the Broad Foundation.

Response to Comment BU28-6

Metro will work to minimize any utility service disruptions, and will notify the community in advance should any brief outages be necessary.

Response to Comment BU28-7

Comment acknowledged. Please refer to Responses to Comments BU28-19 through BU28-23, below.

Response to Comment BU28-8

As indicated in Section 4.3, Community and Neighborhood Impacts, of the Draft EIS/EIR and this Final EIS/EIR, mitigation to reduce community and neighborhood impacts during construction of the Locally Preferred Alternative involves the development of a community outreach plan to notify local communities of construction schedules, street lane and sidewalk closures, and detours. In addition, Metro and the construction contractor will coordinate with local communities during preparation of traffic management plans to minimize potential construction impacts to community resources and special events.

Response to Comment BU28-9

Comment acknowledged. As indicated in Response to Comment BU28-8 above, mitigation to reduce community and neighborhood impacts during construction of the Locally Preferred Alternative involves the development of a community outreach plan to notify local communities of construction schedules, street lane and sidewalk closures, and detours. In addition, Metro and the construction contractor will coordinate with local communities during preparation of traffic management plans to minimize potential construction impacts to community resources and special events.

In addition, Metro will provide Related and other affected property owners in-progress construction schedules of the Locally Preferred Alternative until a detailed construction schedule is finalized and available to provide. This would likely be after issuance of a Record of Decision by FTA.

Response to Comment BU28-10

Comment acknowledged. During the design process, Metro will coordinate with the Broad Foundation and the Related Companies regarding the design of the 2nd/Hope Street station in order to create a cohesive design of the station. New urban design drawings of the Locally Preferred Alternative are available on Metro's website and have been provided at recent urban design meetings held during the preparation of this Final EIS/EIR.

Response to Comment BU28-11

Comment acknowledged. The Broad Art Foundation Museum, currently under construction, is projected to include a plaza above General Thaddeus Kosciuszko Way connecting to Upper Grand Avenue. In order to provide access from the 2nd/Hope Street station to Upper Grand Avenue and meet ADA compliance, an elevator would be built as part of the Locally Preferred Alternative from the station entrance to the plaza if one is not already provided. If the plaza is not built as part of the Broad Art Foundation Museum, a pedestrian connection (such as a pedestrian bridge) would be built as part of the Locally Preferred Alternative from the elevator to Upper Grand Avenue. Concepts of the 2nd/Hope Street station will also assume the existence of a plaza space above General Thaddeus Kosciuszko Way, either built as part of the Broad Art Foundation Museum or the Locally Preferred Alternative, to allow for a compatible pedestrian connection to Upper Grand Avenue and to the Broad Art Foundation Museum.

Response to Comment BU28-12

Refined and updated plans and profiles are provided in Final EIS/EIR Appendix 1, Updated Locally Preferred Alternative Drawings. Metro staff will continue meeting with the Broad Foundation staff to coordinate property ingress and egress and other design issues.

Response to Comment BU28-13

Adequate studies were performed to arrive at impact determinations in the Draft EIS/EIR. Such determinations are not reliant on future studies, but are based on the studies performed for the Draft EIS/EIR. In cases where specific data was not available, Metro assumed a worst-case scenario to ensure that the actual impacts would be equal to or less than what was studied in the Draft EIS/EIR. Future studies will confirm actual impact levels, but the severity of impacts will not exceed the assumptions studied in the Draft EIS/EIR. Metro will implement all mitigation measures listed in the Mitigation Monitoring and Reporting Program for the Locally Preferred Alternative (Chapter 8) of this Final EIS/EIR as a condition of project approval.

Response to Comment BU28-14

Items 1 through 9 are addressed separately in the above responses to comments. No item 10 is shown.

Response to Comment BU28-15

During the environmental review process for this project, environmental documents have been made available to the public. The Draft EIS/EIR was circulated to affected local, state, and federal agencies; tribes; community groups; interested individuals; and other interested parties. The document was also made available at Metro's offices, public libraries, and in electronic format on Metro's website. A formal public comment period was initiated following publication of the Draft EIS/EIR, giving the public the opportunity to review and comment on the document.

During preparation of this Final EIS/EIR, Metro met with stakeholders through meetings, which included The Related Companies, L.P., Grand Avenue, LLC, and The Broad Collection, guiding them in the decision-making process as it relates to the proposed station locations, alignment options, and anticipated mitigation measures. Community input during these meetings has been taken into account in the refinement of the Locally Preferred Alternative and the Mitigation

Monitoring and Reporting Program for the Locally Preferred Alternative (Chapter 8), which are presented in this Final EIS/EIR.

A Notice of Availability was also distributed notifying the public of the availability of this Final EIS/EIR. The document was also made available at Metro's offices, public libraries, and in electronic format on Metro's website.

Response to Comment BU28-16

Comment acknowledged. Metro and FTA are conducting the environmental analysis for the Regional Connector project in accordance with NEPA and CEQA requirements.

Response to Comment BU28-17

As indicated in Response to Comment BU28-15, Metro has met with stakeholders and community groups during preparation of this Final EIS/EIR. Metro will continue to meet with project stakeholders, including The Related Companies, L.P., Grand Avenue, LLC, and The Broad Collection, as needed to effectively communicate project progress and updates during the rest of the design phase and construction phase of the project.

Response to Comment BU28-18

Comment acknowledged. Metro looks forward to continued coordination with The Related Companies, L.P., Grand Avenue, LLC, and The Broad Collection regarding the Regional Connector project.

Response to Comment BU28-19

Please refer to Response to Comment BU28-4, above. Any potential change in support due to tunneling will continue to be confirmed as part of the final design phase, and coordinated with Related Companies and the Broad Foundation.

Response to Comment BU28-20

Previous explorations in the project area have not indicated the presence of methane. Additional sampling of soil gas will occur during the explorations as part of the final design phase. Since methane has not been detected, insignificant diversion of methane is anticipated due to the project construction and permanent structures. Both the tunnels and station facilities will be designed based on the requirement to minimize additional methane seepage to adjacent properties as a result of the Regional Connector construction. This effort will be coordinated with both Related Companies and the Broad Foundation.

Response to Comment BU28-21

The tunnel and stations will be designed and constructed to minimize potential impacts to existing structures for both construction and operation of trains. Refer to Section 4.7, Noise and Vibration, of this Final EIS/EIR regarding vibration impacts associated with construction and operation of the Regional Connector project. During the continued development of the construction and engineering plans for the tunnels and stations, Metro will continue to work closely with the museum to ensure that vibration impacts are avoided or minimized to a less than significant level. Metro will implement the mitigation measures shown in the Mitigation Monitoring and Reporting Program for the Locally Preferred Alternative (Chapter 8) and Section

4.7.4.2 of this Final EIS/EIR, which would reduce vibration impacts associated with construction and operation to less than significant. Metro will further refine proposed construction activities based on ongoing monitoring and technical analysis, in order to reduce vibration.

Response to Comment BU28-22

Static groundwater was not encountered during the geotechnical investigation for the EIS/EIR phase. The rock is not considered to be water-bearing. However, seepage may be expected in Bunker Hill in fractures and joints. More detailed ground-water investigations will be performed to better characterize the groundwater by installing groundwater monitoring wells and multi-level piezometers. Please also refer to Response to Comment to BU28-4, above.

Response to Comment BU28-23

Please refer to Responses to Comments BU28-19 through BU28-22, above.

Los Angeles, CA 90012-2952

RE: Support for Regional Connector DEIS/R: Fully-Underground Alternative with Three Stations

Dear Board Members:

Established in 1924, Central City Association (CCA) is L.A.'s premier business advocacy association whose 450 members employ over 350,000 people in the Los Angeles region. CCA is leading the Downtown Los Angeles renaissance and is devoted to promoting a vibrant 24-hour, internationally renowned city center. Increasing mobility is paramount to continuing Downtown's draw as a destination to live, work, and play. On behalf of CCA, I offer this letter in strong support of the $1.3 billion fully-underground Regional Connector, with three stations, as described in the Draft Environmental Impact Statement/Report. 1

The renaissance has transformed Downtown from a 9-to-5 business center into a residential, cultural, and entertainment destination, drawing in 27,000 new residents, 93,500 new jobs, $180 million in tax revenues to the city and county, and $10.9 billion in business revenues. Located in the heart of Downtown, the Regional Connector will create a seamless transit experience and provide straightforward accessibility region-wide.

While CCA originally supported the inclusion of the 5th and Flower station in the Locally Preferred Alternative (LPA), we understand that it could lead to cost overruns, and that a proposal with cost overruns could jeopardize the entire Regional Connector project. We continue to support public transit access to the Financial District and request that Metro consider all reasonable measures to allow for the addition of a future station as the design phase progresses. Should Metro identify additional funding or cost-savings, we would strongly encourage the agency to consider reinstating the 5th and Flower station. 2

We would like to take this opportunity to commend Ann Kerman, Dolores Roybal-Saltarelli, and Metro's consultants whose professionalism and attention to the community has led to a project that we can all be proud of and get behind. 3

As a major Downtown stakeholder, CCA strongly supports the fully-underground alternative, including three stations, as the LPA and requests your support. 4

Thank you for your consideration.

Sincerely,

Carol E. Schatz
President & CEO
Central City Association of Los Angeles

cc: Mr. Arthur T. Leahy, Chief Executive Officer, Metro
Ms. Ann Kerman, Constituent Program Manager, Metro

BU29

Responses to Comments from Central City Association of Los Angeles, Schatz, Carol E.

Response to Comment BU29-1

Thank you for your comment. Support for the Fully Underground LRT Alternative is noted. The Metro Board of Directors voted on October 28, 2010 to designate the Fully Underground LRT Alternative as the Locally Preferred Alternative.

Response to Comment BU29-2

Support for the Flower/5th/4th Street station is noted. Metro will continue to examine ways to reduce project costs. The Metro Board of Directors voted on October 28, 2010 to designate the Fully Underground LRT Alternative without the Flower/5th/4th Street station as the Locally Preferred Alternative. An enhanced pedestrian walkway connecting the 4th/Flower Streets area to the existing 7th Street/Metro Center Station would be constructed on Flower Street to improve access to the Financial District. The design of the Locally Preferred Alternative would not preclude a station at 5th and Flower Streets from being built as a possible future, separate project.

Response to Comment BU29-3

Thank you for your comment. Comment acknowledged.

Response to Comment BU29-4

Thank you for your comment. Support for the Fully Underground LRT Alternative is noted.

October 20, 2010

Re: **Planning and Programming Committee Meeting**
Regional Connector Transit Corridor Project
Draft Environmental Impact Statement/Environmental Impact Report

Directors - LACMTA

Speaker – Glen Berryhill, Vice President, Thomas Properties Group

Thomas Properties Group ("TPG") is real property owner and property manager of the Financial District properties located at 515-555 South Flower Street, named as "City National Plaza and Towers" in the draft EIS/EIR, and 400 South Flower Street, known as the "J-2 Garage", collectively, the "Adjacent Properties". Both of these properties are immediately adjacent to the Regional Connector Transit Corridor Project ("Regional Connector"). 1

TPG wishes to register support for the Fully Below-Grade LRT Alternative.

However, the staff recommendation includes the elimination of the station proposed immediately north of 5TH Street due to lack of funding. TPG requests that this station continue to be included in the Final EIR and future studies so that the option to include this station is not completely eliminated at this time. A station in this location is beneficial in providing an important and needed connection at the center of the Financial District and adjacent to the Central Library. 2

TPG is supportive of the Fully Underground LRT Alternative but formally opposes the At-Grade Emphasis LRT Alternative with a station proposed immediately south of 5TH Street. 3

Thank you very much for your consideration.

Glen Berryhill

BU30

Responses to Comments from Thomas Properties Group Inc., Berryhill, Glen

Response to Comment BU30-1

Thank you for your comment. Support for the Fully Underground LRT Alternative is noted. The Metro Board of Directors voted on October 28, 2010 to designate the Fully Underground LRT Alternative as the Locally Preferred Alternative.

Response to Comment BU30-2

Support for the Flower/5th/4th Street station is noted. The Metro Board of Directors voted on October 28, 2010 to designate the Fully Underground LRT Alternative without the Flower/5th/4th Street station as the Locally Preferred Alternative. The deletion of the station was done in an effort to reduce the cost of the project while still meeting the project's purpose and need. An enhanced pedestrian walkway connecting the 4th/Flower Streets area to the existing 7th Street/Metro Center Station would be constructed on Flower Street to improve access to the Financial District. Metro understands the importance of serving the Financial District and believes that the Locally Preferred Alternative still meets the purpose and need of the project despite the station deletion. Deletion of the Flower/5th/4th Street station would result in minimal ridership losses because most riders would use the 2nd/Hope Street station or 7th Street/Metro Center station, which would service the Financial District. After the October 28, 2010 meeting, the Metro Board of Directors directed staff to meet with the Financial District stakeholders to discuss options for privately funding the Flower/5th/4th Street station, but no funding sources were identified. However, the design of the Locally Preferred Alternative would not preclude a station at 5th and Flower Streets from being built as a possible future, separate project.

Response to Comment BU30-3

Thank you for your comment. It is noted that the commenter supports for the Fully Underground LRT Alternative and opposes the At-Grade Emphasis LRT Alternative. The Metro Board of Directors voted on October 28, 2010 to designate the Fully Underground LRT Alternative as the Locally Preferred Alternative.

Subject: Comment for Metro Project

1. We want to ask you to consider any other routes besides 2nd Street, such as Temple, 3rd, 4th, 5th, 6th, etc.
As you are aware, 2nd Street is the narrowest and busiest street with so many small retail stores, restaurants and residential buildings.
We also want to ask you to get some technical advises again to research if it is really difficult to chose other routes.
A Metro staff explained at the meeting on 10/13/10, saying that it is not easy to make turn toward Union Station if the train is coming from the direction other than 2nd St.
Please clearfy why it has to be from 2nd St, not from 3rd, 4th or any other.
We cannot understand in that point.

2. Is there any possibility that you can use the existing line (Gold line) to connect to the other line?
It might cost more however, gives community less hassle.

3. We strongly suggest you to consider compensation for stores & restaurants which are located in Little Tokyo area during construction.
If we cannot keep daily sales, many business will not survive and many employees will lose their job.

BU31

Responses to Comments from J-WAVE Video, Ishida, Hiroshi Brian

Response to Comment BU31-1

The Metro Board of Directors voted on October 28, 2010 to designate the Fully Underground LRT Alternative as the Locally Preferred Alternative, which includes tunneling beneath 2nd Street. Metro considered alternatives on streets other than 2nd Street in the Alternatives Analysis process. This was documented in the Final Alternatives Analysis Report (Appendix H) of the Draft EIS/EIR and this Final EIS/EIR. Metro has refined the Locally Preferred Alternative, and cut and cover construction along 2nd Street would no longer be needed in Little Tokyo. No surface impacts on 2nd Street in Little Tokyo are anticipated. Alignments along other east-west streets involved higher-risk tunneling under high rise buildings, preclusion of a station serving Bunker Hill, greater property acquisitions, and curves too sharp to be accommodated by Metro's current fleet of light rail trains.

Response to Comment BU31-2

The existing Metro Gold Line operates at-grade in the vicinity of the 1st and Alameda intersection. Since the Regional Connector's new station in Little Tokyo would be underground, the at-grade tracks would have to be replaced by an underground junction and portals in order to make the connection to the existing Metro Gold Line. Metro will implement the mitigation measures shown in the Mitigation Monitoring and Reporting Program for the Locally Preferred Alternative (Chapter 8) of this Final EIS/EIR to minimize impacts to businesses.

Response to Comment BU31-3

This mitigation measure has been recorded in Section 4.17.4.2 of this Final EIS/EIR as one of the mitigation measures suggested by the Little Tokyo community. Metro has identified measures in the Mitigation Monitoring and Reporting Program for the Locally Preferred Alternative (Chapter 8) of this Final EIS/EIR that will provide support for the Little Tokyo businesses. This could take the form of in-kind advertising, Metro-sponsored coupons, city-wide advertising that Little Tokyo is open for business during construction, and similar supportive measures.

Re: Regional Connector Transit Corridor Project

Dear Ms. Saltarelli:

This firm represents the Tribune Company, owner and publisher of the Los Angeles Times, which occupies the property located on the block surrounded by West Second Street, South Spring Street, West First Street, and South Broadway (the "Tribune Property"). The Tribune Company also owns the property located south of Second Street between Broadway and Spring Street, which is currently used as a surface parking lot. The Los Angeles Times has regularly supported the efforts of the Metropolitan Transportation Authority ("Metro") to develop new transit facilities throughout the Los Angeles Region. Upon careful review of the Draft Environmental Impact Report/Draft Environmental Impact Statement ("DEIR/DEIS") for the Regional Connector Transit Corridor Project (the "Project"), the Tribune Company nevertheless has a number of concerns regarding potential impacts that the construction and operation of the Project may have with respect to the ongoing operations of the Los Angeles Times. 1

The proposed alignment of each of the light rail transit alternatives studied in the DEIR/DEIS is located along Second Street between Hope Street and Alameda Street and will therefore be immediately adjacent to the Tribune Property between Broadway and Spring Street. Under the At-Grade Emphasis LRT Alternative, trains would travel at grade along this portion of Second Street, which would be dedicated as a transit-only roadway providing only emergency vehicle access and local access to adjacent properties. Under the Underground Emphasis LRT Alternative, trains would travel underground below Second Street, but a station would be located either between Broadway and Spring Street or between Main Street and Los Angeles Street. Under the Fully Underground LRT Alternative, trains would similarly travel underground below Second Street, but there is no option to locate a station between Main Street and Los Angeles Street, and the proposed station would be located between Broadway and Spring Street, immediately adjacent to the Tribune Property.

Each of the three light rail transit alternatives analyzed in the DEIR/DEIS would adversely impact operations at the Tribune Property to varying degrees; however, the fewest adverse impacts would result from the Underground Emphasis LRT Alternative, which locates the proposed station on Second Street between Main Street and Los Angeles Street. The Tribune Company accordingly urges Metro to adopt the Underground Emphasis LRT Alternative with the proposed station to be located between Main Street and Los Angeles Street, or to adopt the Fully Underground LRT Alternative with the proposed station to be relocated to an alternate location. 1 cont'd

The entrance into the main parking structure for the Tribune Property is located on Second Street. Two driveways into the surface parking lot located south of Second Street are also located on Second Street. A majority of the employees of the Los Angeles Times park in a parking facility south of Second Street and walk to the Tribune Property along Spring Street or Broadway. Construction of the Project will interfere with vehicular and pedestrian access to the Tribune Property under any of the Project Alternatives analyzed in the DEIR/DEIS. 2

Operation of the Project will also significantly interfere with pedestrian and vehicular access to the Tribune Property under the At-Grade Emphasis LRT Alternative, which proposes that Second Street be dedicated as a transit-only roadway with limited vehicular access. Vehicular restrictions along Second Street between Broadway and Spring Street will limit vehicular access to the parking structure and the surface parking lot that both have access from Second Street. Should this Alternative be implemented, it is imperative that full access be maintained to the Tribune Property during both construction and operation of the Project. Protection for pedestrians walking to and from the Tribune Property from south of Second Street along Broadway and Spring Street must also be maintained during both construction and operation of the Project should the At-Grade Emphasis LRT Alternative be implemented. 3

The impacts of the Underground Emphasis LRT Alternative and the Fully Underground LRT Alternative on the Tribune Property would be similar if a station were located on Second Street between Broadway and Spring Street. In addition to the adverse impacts on pedestrian and vehicular circulation associated with the construction of the At-Grade Emphasis LRT Alternative identified above, use of cut-and-cover techniques proposed in connection with the construction of the segment of the Project located between Broadway and Spring Street would completely disrupt all access to the Tribune Property and adjoining properties from Second Street during construction. Moreover, use of the sidewalks along Broadway and Spring Street both north and south of Second Street for construction staging will exacerbate adverse impacts on pedestrian safety and pedestrian access to the Tribune Property during construction. 4

In addition to adversely impacting access to the Tribune Property, development of the proposed station between Broadway and Spring Street will require the full take of the property located south of Second Street currently used by the Tribune Company for surface parking, as well as the full take of two adjoining properties located south of Second Street and east of Spring Street. 5

The Tribune Company derives parking and filming support revenues from its property located south of Spring Street and also maintains a 15,000 gallon underground fuel storage tank on the property to operate emergency backup generating equipment for the Tribune Property. Displacement of the fuel storage tank not only has the potential to disrupt operations, but few viable alternative locations exist for the relocation of the fuel storage tank. The DEIR/DEIS does not address the potential hazards associated with the risk of upset in connection with the displacement of the existing fuel storage tank or the potential cost or disruption to operations that would result from the displacement of the storage tank.

5 cont'd

In contrast to the difficulties associated with constructing a station between Broadway and Spring Street, development of a station along Second Street between Main Street and Los Angeles Street would involve only a partial take of a portion of the affected property and a permanent underground easement for another portion. Displacement of existing uses would be minimal, and there would be no disruption of access to adjoining properties. If the construction of the proposed station between Main Street and Los Angeles Street is not feasible for other reasons, there are alternative locations for the proposed station along Second Street between Olive Street and Hill Street and between Hill Street and Broadway that would have less impact on surrounding uses. The DEIR/DEIS should therefore analyze additional alternatives for the location of the proposed station that would be less disruptive to existing businesses.

6

Thank you very much for the opportunity to provide these comments on the DEIR/DEIS. Please contact me if you have any questions or if I can provide further information with respect to this matter.

Very truly yours,

Patrick A. Perry

PAP

BU32

Responses to Comments from Allen Matkins Leck Gamble Mallory & Natsis LLP on behalf of the Tribune Company, Perry, Patrick A.

Response to Comment BU32-1

Thank you for your comment. Support for the Underground Emphasis LRT Alternative, station option preference, and the Fully Underground LRT Alternative with station relocation is noted. The Metro Board of Directors voted on October 28, 2010 to designate the Fully Underground LRT Alternative as the Locally Preferred Alternative. The Locally Preferred Alternative includes a station on 2nd Street between Broadway and Spring Street, and does not include a station on 2nd Street between Main and Los Angeles Streets. Metro evaluated all of the proposed alternatives in the Draft EIS/EIR and found that the 2nd/Broadway station location would not result in any more significant impacts than the other locations studied.

Response to Comment BU32-2

The entrances to the parking structure are on Broadway and Spring Street, but there are none on 2nd Street. The surface parking lot would be permanently acquired by Metro as part of the Locally Preferred Alternative, as shown in Table 4.2-5 of the Draft EIS/EIR and this Final EIS/EIR. Metro will work with the Tribune Company to ensure that adequate pedestrian and vehicular access to the Tribune property is maintained during operating hours throughout the construction phase of the project.

Response to Comment BU32-3

Comment acknowledged. Traffic impacts associated with the At-Grade Emphasis LRT Alternative were analyzed in Chapter 3, Transportation Impacts and Mitigation, of the Draft EIS/EIR and this Final EIS/EIR. The Locally Preferred Alternative is grade-separated. Therefore, the concerns stated in this comment regarding the At-Grade Emphasis LRT Alternative are not an issue under the Locally Preferred Alternative.

Response to Comment BU32-4

Metro will work with the Tribune Company to ensure that adequate pedestrian and vehicular access to the Tribune property is maintained during operating hours throughout the construction phase of the project. This includes providing adequate sidewalk access. Construction staging areas will be designed to ensure pedestrian safety.

Response to Comment BU32-5

During the construction period of the 2nd/Broadway station, access to the Tribune property would be maintained at all times during operating hours. If existing access points would need to be closed for construction-related activities, temporary access locations would be provided until the existing access points are re-opened. Business compensation and assistance would be provided in compliance with the Uniform Relocation Assistance and Real Property Acquisition Policies Act of 1970. Metro is aware of the existing fuel tank. Metro will relocate the tank during construction to allow it to continue operating. No significant impacts are anticipated.

Response to Comment BU32-6

The Locally Preferred Alternative would have a station beneath 2nd Street between Broadway and Spring Street. Metro evaluated other potential station locations on 2nd Street but found that they would offer poor connections to the proposed downtown streetcar project on Broadway, or would require greater business displacements. As shown in Section 4.2.3 of the Draft EIS/EIR and Section 5.4.1.3 (and referenced in Section 5.5.1.3) of Appendix N, Displacement and Relocation Technical Memorandum, of the Draft EIS/EIR, and Section 4.2.3 of this Final EIS/EIR, there would be no significant impacts associated with the displacement of the existing parking lot at 201 South Spring Street and 200 and 208 South Broadway. Metro is working to minimize the potential for disruption of existing businesses.

Re: DEIS/DEIR – Regional Connector Transit System

As a person whose family has been doing business in Little Tokyo since 1910, a resident in Little Tokyo, and a member of many community organizations,

I would like to support the fully underground alternative but have serious concerns with respect to the substantial construction phase impacts that will occur during the pre-construction and the actual construction phase of the Regional Connector Project. Among the key concerns as addressed in the current DEIS/DEIR, but is not limited to, is as follow: 1

A. ***Preservation of Japanese Business Influence and Culture:*** Little Tokyo is a commercial district, which has served as a ***Japanese Community Center*** for decades. Little Tokyo is one of the three remaining "Japan Towns" in the United States, the other two are in San Francisco and San Jose. Before World War II, Little Tokyo 2

was the largest Japanese-American community. Little Tokyo once encompassed a larger area than today.

Little Tokyo has existed since the early 1900's, and has included commercial and residential uses. During World War II and the Japanese internment, Little Tokyo was abolished and renamed Bronzeville. Bronzeville was comprised primarily of African-Americans and Hispanics. Upon the return of interred Japanese, Little Tokyo was revitalized as a Japanese-American community, though not on the pre-war scale. In 1970, Little Tokyo was designated a redevelopment area by the Community Redevelopment Agency of the City of Los Angeles. With the assistance of the CRA/LA, Little Tokyo became the entry point for Japanese corporations into Southern California. Japanese business influence led to further changes in the social, political, physical, and economic environment of Little Tokyo as well as enriching the cultural identity that has made Little Tokyo a unique community and business

2 cont'd

center..

Little Tokyo has a large number of Japanese restaurants and other retail stores. Businesses are particularly concentrated around Japanese Village Plaza on the block bounded by 1st Street, Central Avenue, 2nd Street, and San Pedro Street. The current DEIS/DEIR has identified serious construction impacts under all the build alternatives currently considered by the Regional Connector Project. Serious and real discussions needs to take place with Metro Staff and the Little Tokyo business community to preserve the ***Japanese identity influence and culture.***

B. Business Interruption: The current DEIS/DEIR has identified

3

numerous construction impacts that will affect the conduct of business and impede access to the business concerns. This will result in serious economic impacts to the Little Tokyo business community. During the course of construction, every effort shall be made to minimize adverse impacts which, businesses, tenants, property owners, and valued visitors/customers may encounter that prevents them from conducting reasonable business and personal activities within the Little Tokyo Community. Additional funding shall be made available for those businesses, tenants, or property owners whose business endeavors are adversely impacted during the course of construction of the Regional Connector Project. A special business interruption committee shall be established, whose membership shall include Little Tokyo businesses, tenants, and property owners, along with those governmental agencies, having jurisdiction to make policy to resolve issues arising from adverse business interruptions during the course of construction of the Regional Connector Project.

3 cont'd

C. ***Replacement On-Street and Off-Street Parking:*** The current DEIS/DEIR has identified serious construction impacts that will affect traffic and parking within the Little Tokyo community under all of the build alternatives. Construction of the Regional Connector Project will result in the loss of on-street parking and reduction in travel lanes. Lane closures during construction would result in temporary removal of existing on-street spaces and loading stalls. Certain construction requirements will require temporary sidewalk detours , which will impede pedestrian flow.

Numerous Little Tokyo street level businesses relay on on-street parking for their patrons and the street-level pedestrian flow. With the traffic congestion and on-street parking losses, the patrons to these street level businesses will seeking alternative

4

communities for similar products and services, resulting in serious economic hardship to the Little Tokyo businesses.

All off-street parking spaces loss through eminent domain shall be replaced. All on-street and off-street parking spaces taken away during the course of construction shall be replaced. Alternative or temporary parking during construction should be identified and

utilized.

4 cont'd

The Regional Connector Transit Corridor is a major project. Construction of this project will affect current businesses and property owners with serious economical impacts, as well as affect the quality of life for the many residents, and members of the many organizations, which in turn will affect the future of the entire Little Tokyo Community and surrounding communities. I implore

MTA to seriously study and act to address these mitigation issues.

5

Sincerely,

Frances Hashimoto
Mikawaya
800 E. Fourth Street

BU33

Responses to Comments from Mikawaya, Hashimoto, Frances

Response to Comment BU33-1

Support for the Fully Underground LRT Alternative is noted. The Metro Board of Directors voted on October 28, 2010 to designate the Fully Underground LRT Alternative as the Locally Preferred Alternative. The pre-construction and construction concerns are addressed individually in Responses to Comments BU33-2 through BU33-5, below.

Response to Comment BU33-2

Metro recognizes the significance of Little Tokyo to Japanese Americans nationwide, and expressed the community's importance in Section 4.17.2 of the Draft EIS/EIR and this Final EIS/EIR. Metro acknowledges the disproportionate adverse impacts that Regional Connector construction would have in Little Tokyo, and addresses them in the Mitigation Monitoring and Reporting Program for the Locally Preferred Alternative (Chapter 8) of this Final EIS/EIR. Metro has been working closely with the Little Tokyo community since the outset of the Alternatives Analysis process in October 2007. Metro staff have performed extensive outreach measures, as documented in Chapter 7, Public and Agency Outreach, of the Draft EIS/EIR and this Final EIS/EIR, including numerous public meetings, Japanese and Korean language interpretations, and door-to-door visits with business owners to provide information about the project and gather input. Metro will enact the measures listed in the Mitigation Monitoring and Reporting Program for the Locally Preferred Alternative to minimize impacts to businesses, and will coordinate activities with the community throughout the construction process. As described in Chapter 2, Alternatives Considered, Section 4.18, Construction Impacts, of this Final EIS/EIR, since publication of the Draft EIS/EIR, alignment refinements have been made to reduce construction impacts in Little Tokyo, reduce the amount of cut and cover activities, and reduce the extent of acquisitions needed on the block bounded by 1st Street, Central Avenue, 2nd Street, and Alameda Street. These refinements would reduce construction impacts near the Japanese Village Plaza by eliminating the need for cut and cover activities on 2nd Street in Little Tokyo. It is Metro's goal to help preserve the Little Tokyo community and its businesses during construction. Metro will continue to meet with the community for the duration of the project.

Response to Comment BU33-3

It is Metro's goal to minimize adverse impacts to the Little Tokyo community, including impacts to businesses. Metro will implement the mitigation measures proposed by the Little Tokyo Community Council and Little Tokyo Business Improvement District/Little Tokyo Business Association regarding business interruption shown in the Mitigation Monitoring and Reporting Program (Chapter 8) of this Final EIS/EIR. Metro will work with the Regional Connector Community Leadership Council to serve all businesses affected by Regional Connector construction.

Response to Comment BU33-4

Metro understands the impacts that construction would have in the Little Tokyo community, and will work with the community to minimize impacts to businesses. During construction, Metro will minimize lane and sidewalk closures, and will provide adequate detours to maintain pedestrian flow. Temporary replacement parking will be provided during construction as needed

to offset the impact of on-street and off-street parking removal. As part of temporary replacement parking efforts, Metro will provide two acres of land on the Mangrove property, located at the northeast corner of 1st and Alameda Streets, for the purposes of providing supplemental parking services, such as valet parking services during construction. Please refer to the Transportation Impacts and Environmental Justice sections of Chapter 8, Mitigation Monitoring and Reporting Program for the Locally Preferred Alternative, for more information regarding construction parking mitigation measures.

Response to Comment BU33-5

Comment acknowledged. Please refer to Responses to Comments BU33-1 through BU33-4, above, for detailed responses to concerns raised by the commenter about project-related construction impacts to the Little Tokyo community. In addition, construction and economic impacts associated with the project were analyzed in Sections 4.14, Economic and Fiscal Impacts, and 4.18, Construction Impacts, of the Draft EIS/EIR and Sections 4.14, Economic and Fiscal Impacts, and 4.18, Construction Impacts, for the Locally Preferred Alternative in this Final EIS/EIR.

1 Gateway Plaza, MS 99-22-2
Los Angeles, CA 90012

Re: Regional Connector Project in Los Angeles/Little Tokyo

Dear Dolores Saltarelli and Metro Board Committee:

Thank you for allowing us to share our comments on the Regional Connector Project.

After reviewing Draft EIR/EIRwe strongly oppose any project coming through the narrow streetso this small community. The Metro project that will be paving it's way along 2nd Street will destroy the charm of the community and also irrevocably impact hundreds' of taxpayers' livelihoods. Japanese citizens of multiple generations will be forced to endure untenable financial losses during an unpredictable 4-5 year project.

1

Although the opposition might argue that this project will create jobs, a larger number of jobs in this community will be lost. The closed or barely surviving businesses will also yield losses of tax revenue, and the street closures will mean losses of parking revenues. How will customers patronize these businesses while this street is blocked with limited access? And how will these shopowners

be compensated for their losses during this extremely long time period? I only hope that they will be compensated substantially and in good faith. 1 cont'd

Therefore, we are in favor of 'No Build." Please do not allow this project to continue down this path. It will not only create economic hardships for individual business owners and the city, but also destroy an important culture in LA that many generations have preserved for the current generations and the future. 2

Respectfully,

Arlene Akemi Balkin

Responses to Comments from Levy Affiliated Holdings, LLC, Balkin, Arlene Akemi

Response to Comment BU34-1

The Metro Board of Directors voted on October 28, 2010 to designate the Fully Underground LRT Alternative as the Locally Preferred Alternative. This alternative would not involve street-running tracks on 2nd Street. Construction durations for the Fully Underground LRT Alternative were shown in Table 4.18-2 of the Draft EIS/EIR and for the Locally Preferred Alternative in Table 4.18-1 of this Final EIS/EIR. The entire construction process would take four to five years, but the duration of construction in any one location in Little Tokyo would be less than four years. Metro will implement the mitigation measures in the Mitigation Monitoring and Reporting Program for the Locally Preferred Alternative (Chapter 8) of this Final EIS/EIR with the goal of supporting businesses throughout the construction phase. This will include targeted marketing efforts and other in-kind assistance. Metro will also provide two acres of land on the Mangrove property, located at the northeast corner of 1st and Alameda Streets, for the purposes of providing supplemental parking services, such as valet parking services during construction in order to preserve the accessibility of the neighborhood during construction. Metro will minimize street lane closures, and will maintain access to businesses throughout the construction process.

Response to Comment BU34-2

Thank you for your comment. Support for the No Build Alternative is noted. The Metro Board of Directors voted on October 28, 2010 to designate the Fully Underground LRT Alternative as the Locally Preferred Alternative. Impacts associated with each alternative were described in Chapter 3, Transportation Impacts and Mitigation, and Chapter 4, Environmental Analysis, Consequences, and Mitigation, of the Draft EIS/EIR and this Final EIS/EIR.

Subject: Comment on subway project on 2nd Street
Date: Monday, October 18, 2010 8:28 AM
From: Yuji Okamoto <yujihaircraft@hotmail.com>
To: Regional Connector <RSC_RegionalConnector@metro.net>

This message is to Ms. Dolores Roybal Saltarelli-Project Manager,

My name is Yuji Okamoto, the ower of hair salon called Hair Craft located within the building of Weller Court on 2nd Street.

I heard about the project of subway construction going under the 2nd Street. First of all, I am not opposing towards the project itself. I would rather be happy about the new subway system created within our city. However, the 2nd Street has been newly developed within recent few years. As you may know, there are more tall modern buildings on 2nd Street than 1st, and more people tend to come to 2nd Street rather than the 1st now. There are only restaurants on 1st Street, but we have different type of stores on 2nd Street including grocery market - you know there is no other grocery market in that area. 1

If you try to construct the subway underneath of 2nd Street, it only bothers our business but also lots of customers. Besides, there are some public buildings along the street. I wonder if it is good idea to block those area for certain period. We have very limited parking spot within the Little Tokyo that if those parking will be eliminated or block even for short period, we are loosing business completely.

I would suggest you to investigate little more towards the 3rd or even 4th Street. There are so many storage buildings or open field along that area. That would be much ideal area for construction. 2

Please re-consider the line going underneath of 2nd Street.

Regards,

Yuji

BU35

Responses to Comments from Hair Craft Salon, Okamoto, Yuji

Response to Comment BU35-1

Project alternatives involving alignments on 2nd Street were first developed as part of the Alternatives Analysis process and presented to the Little Tokyo community in 2007. To date, no new buildings have been constructed on 2nd Street since the inception of these alternatives. Potential alignments on 1st Street were studied in the Alternatives Analysis process and eliminated from further consideration due to potential difficulties in making the connection to the Metro Gold Line at-grade and desire to avoid construction activities in the Little Tokyo Historic Core.

Metro recognizes the uniqueness of businesses in Little Tokyo and will continue to work with the community to minimize adverse impacts. As described in Chapter 2, Alternatives Considered, and Section 4.18, Construction Impacts, of this Final EIS/EIR, the Locally Preferred Alternative has been refined since publication of the Draft EIS/EIR. The refined alignment would not involve cut and cover construction on 2nd Street in Little Tokyo, thus eliminating the need for lengthy closures of the street and sidewalk. Temporary intermittent closures may still be needed, but these would be less frequent than with the non-refined alternative described in the Draft EIS/EIR. No surface disruption or impacts to businesses on 2nd Street in Little Tokyo are anticipated as a result of the passage of the tunnel boring machine. Temporary replacement parking will be provided during construction as needed to offset the impact of on-street and off-street parking removal. As part of temporary replacement parking efforts, Metro will provide two acres of land on the Mangrove property, located at the northeast corner of 1st and Alameda Streets, for the purposes of providing supplemental parking services, such as valet parking services during construction. Please refer to the Transportation Impacts and Environmental Justice sections of Chapter 8, Mitigation Monitoring and Reporting Program for the Locally Preferred Alternative, for more information regarding construction mitigation measures.

Response to Comment BU35-2

The Metro Board of Directors voted on October 28, 2010 to designate the Fully Underground LRT Alternative as the Locally Preferred Alternative, which includes tunneling beneath 2nd Street. Metro considered alternatives on streets other than 2nd Street in the Alternatives Analysis process. This was documented in the Final Alternatives Analysis Report (Appendix H) of the Draft EIS/EIR and this Final EIS/EIR. Metro has refined the Locally Preferred Alternative, and cut and cover construction along 2nd Street would no longer be needed in Little Tokyo. No surface impacts on 2nd Street in Little Tokyo are anticipated. Alignments along other east-west streets involved higher-risk tunneling under high rise buildings, preclusion of a station serving Bunker Hill, greater property acquisitions, and curves too sharp to be accommodated by Metro's current fleet of light rail trains.

Re: State Clearinghouse No. 2009031043
Los Angeles County Metropolitan Transportation Authority
Regional Connector Transit Corridor Project
Draft Environmental Impact Statement/Environmental Impact Report

Dear Ms. Roybal Saltarelli and Mr. Tellis:

Thomas Properties Group ("TPG") is real property owner and property manager of the properties located at 515-555 South Flower Street, named as "City National Plaza and Towers" in the subject document, and 400 South Flower Street, known as the "J-2 Garage", collectively, the "Adjacent Properties". Both of these properties are immediately adjacent to the proposed locations of the Los Angeles County Metropolitan Transportation Authority ("LACMTA") Regional Connector Transit Corridor Project ("Regional Connector"). Pursuant to CEQA/NEPA, the following comments are submitted for consideration.

LACMTA has proposed three alternatives for the Regional Connector as follows:

- At-Grade Emphasis LRT Alternative;
- Underground Emphasis LRT Alternative; and
- Fully Underground LRT Alternative.

TPG understands that the Regional Connector will be constructed and that its path will follow Flower Street in immediate proximity to the Adjacent Properties. As developer, owner, and property manager of predominantly sustainable, transit-oriented developments, TPG is in overall support of mass transit, and of the Regional Connector project specifically. However, TPG has a significant economic interest in ensuring the minimization of the short-term construction impacts in the vicinity of the Adjacent Properties and on the tenants, employees, patrons, and visitors of the Adjacent Properties.

1

Specifically, TPG would like to register support for the Fully Underground LRT Alternative. It is our understanding that the LACMTA staff recommendation includes the elimination of the station proposed immediately north of 5th Street due to lack of funding. TPG would like to request that this station continue to be included in the Final EIR and future studies so that the option to include this station is not completely eliminated at this time. A station in this location would be beneficial to provide an important and needed connection at the center of the Financial District and adjacent to the Central Library.

1 cont'd

2

While TPG is supportive of the Fully Underground LRT Alternative; TPG formally opposes the At-Grade Emphasis LRT Alternative inclusive of the proposed below-grade station immediately south of 5th Street. The At-Grade Emphasis LRT Alternative requires a partial take of property for the proposed below-grade station and at-grade access to that station which would be located on the west side of Flower Street adjacent to and under City National Plaza and Towers. This alternative and the resulting take of property would disrupt the substantial enjoyment of, and have the potential to impact business operations at, the City National Plaza and Towers for the following reasons:

- Use of and access to the outdoor pedestrian plaza could be limited, restricted, or eliminated both during construction and operation of this alternative.
- Access to and operation of the subsurface garage which extends to the curb-line in this location could be disrupted both during construction and operation of this alternative.
- Infrastructure, e.g., utilities, providing service to and supporting City National Plaza and Towers could be disrupted both during construction and operation of this alternative.
- Lateral support of the 4-level subsurface structure could be jeopardized by construction of a station adjoining the City National Plaza and Towers property.

3

In light of the proximity and potential impacts to the Adjacent Properties, TPG requests the following:

- LACMTA should consider additional mitigation measures to address the significant traffic impacts identified in the Draft EIR (decreased LOS) that result from the changes to the number of traffic lanes in the immediate vicinity of the Adjacent Properties on Flower Street.

4

- While construction of the tunnel under Flower Street would be performed using cut-and-cover construction, access and circulation impacts could still result at City National Plaza and Towers and the J2 Garage. 5
- With the J2 Garage located across the street from the City National Plaza and Towers, many individuals employed at or visiting City National Plaza and Towers are required to cross both 5th Street and Flower Street; therefore, the safety and maintenance of a pedestrian connection between the Adjacent Properties is necessary at all times (as more generally indicated in the Draft EIR). 6
- TPG provides shuttle service to Union Station, Staples Center and other downtown destinations from the plaza on Flower Street. Furthermore, there is a heavy concentration of transportation lines with stops directly adjacent to the City National Plaza and Towers immediately south of 5th Street. These transportation lines are heavily utilized by employees, tenants, patrons, and visitors of City National Plaza and Towers. Therefore, in addition to mitigation measures in the Draft EIR addressing access to the bus lines, the shuttles should also be addressed. 7
- While City National Plaza and Towers has not been identified as a sensitive receptor in the noise and vibration analysis, due to the immediate proximity of construction to the Adjacent Properties, noise and vibration have the potential to substantially alter the existing ambient noise and vibration environment. General mitigation measures have been identified in the Draft EIR; however, no mitigation measure has been specifically identified to address the substantial change in ambient noise levels in the vicinity of the Adjacent Properties. 8
- Construction under Flower Street has the potential to significantly impact the lateral support of the subterranean garage at both City National Plaza and Towers and the J2 Garage. Specific mitigation measures related to this potential impact need to be addressed in consultation with TPG. 9
- The Draft EIR indicates that an easement is needed for construction staging at the plaza of City National Plaza and Towers. Due to the heavy volume of pedestrians and the number of transportation lines in this location, at no time should the plaza or adjacent sidewalk at City National Plaza and Towers be utilized for construction staging. 10

For all of these reasons, TPG respectfully requests that we be an active participant in planning for construction staging and logistics in those areas adjoining the Adjacent Properties. As owner and property manager of two properties whose operations, employees, tenants, patrons, and visitors will 11

be directly, and negatively, impacted by construction of any of the alternatives, and given the extreme reliance on the functionality of both 5th Street and Flower Streets, TPG has a vested interest in minimizing the short-term impacts of construction. As indicated above, TPG expects to be intimately involved during the planning phases to ensure that LACMTA provides all feasible mitigation measures to reduce construction impacts and effects in the vicinity of the Adjacent Properties. 11 cont'd

TPG looks forward to working with LACMTA for the long-term success of the Regional Connector project and the Fully Below-Grade LRT Alternative.

Sincerely,

Thomas S. Ricci
Executive Vice President

TSR/ct

BU36

Responses to Comments from Thomas Properties Group Inc., Ricci, Thomas S.

Response to Comment BU36-1

Thank you for your comment. Support for the Fully Underground LRT Alternative is noted. The Metro Board of Directors voted on October 28, 2010 to designate the Fully Underground LRT Alternative as the Locally Preferred Alternative.

Response to Comment BU36-2

Support for the Flower/5th/4th Street station is noted. The Metro Board of Directors voted on October 28, 2010 to designate the Fully Underground LRT Alternative without the Flower/5th/4th Street station as the Locally Preferred Alternative. The deletion of the station was done in an effort to reduce the cost of the project while still meeting the project's purpose and need. An enhanced pedestrian walkway connecting the 4th/Flower Streets area to the existing 7th Street/Metro Center Station would be constructed on Flower Street to improve access to the Financial District. Metro understands the importance of serving the Financial District and believes that the Locally Preferred Alternative still meets the purpose and need of the project despite the station deletion. Deletion of the Flower/5th/4th Street station would result in minimal ridership losses because most riders would use the 2nd/Hope Street station or 7th Street/Metro Center Station, which would service the Financial District. After the October 28, 2010 meeting, the Metro Board of Directors directed staff to meet with the Financial District stakeholders to discuss options for privately funding the Flower/5th/4th Street station, but no funding sources were identified. However, the design of the Locally Preferred Alternative would not preclude a station at 5th and Flower Streets from being built as a possible future, separate project.

Response to Comment BU36-3

Support for the Fully Underground LRT Alternative is noted. The At-Grade Emphasis LRT Alternative is not the designated Locally Preferred Alternative. The Metro Board of Directors voted on October 28, 2010 to designate the Fully Underground LRT Alternative as the Locally Preferred Alternative, with the elimination of the Flower/5th/4th Street station. However, construction of a station at this location as a future, separate project would not be precluded by the design of the Locally Preferred Alternative.

Metro plans to minimize the area needed for construction of the Locally Preferred Alternative to the extent feasible. As indicated in Section 4.18, Construction Impacts, of the Draft EIS/EIR and this Final EIS/EIR, building protection measures such as underpinning or ground improvement combined with a geotechnical monitoring program would be used to monitor and protect structures identified for such measures. In addition, prior to construction utilities that would conflict with excavations would be relocated, modified, or protected in place.

Response to Comment BU36-4

Mitigation measures were incorporated in Chapter 3, Transportation Impacts and Mitigation, of the Draft EIS/EIR to reduce intersection impacts associated with each alternative to the maximum extent feasible. Mitigation identified for the Fully Underground LRT Alternative includes:

- Flower Street/4th Street – Restripe the southbound Flower Street approach to provide one shared left-turn/through lane and two through lanes. Then optimize the signal splits.
- Flower Street/5th Street – Restripe the southbound Flower Street approach to provide three through lanes and one exclusive right-turn lane. Then optimize the signal splits.
- Flower Street/6th Street – Restripe the eastbound 6th Street approach to provide three through lanes and two exclusive right-turn lanes. Then optimize the signal splits.

After implementation of mitigation for the Fully Underground LRT Alternative, one intersection would continue to be significantly impacted during the AM peak hour. In the PM peak hour, impacts to all three intersections would be reduced to less than significant.

The above-mentioned mitigation measures have been confirmed in the Mitigation Monitoring and Reporting Program for the Locally Preferred Alternative (Chapter 8) of this Final EIS/EIR.

Response to Comment BU36-5

As stated in Chapter 3, Transportation Impacts and Mitigation, of the Draft EIS/EIR and this Final EIS/EIR, construction-related traffic and pedestrian access impacts would be significant and unavoidable. However, access to the City National Plaza would be maintained during operating hours throughout project construction. Chapter 3, Transportation Impacts and Mitigation, of the Draft EIS/EIR and this Final EIS/EIR identified mitigation measures to reduce traffic circulation and pedestrian access impacts associated with construction to the maximum extent feasible such as: preparation of site- and street-specific Worksite Traffic Control Plans in cooperation with the Los Angeles Department of Transportation; maintenance of access to adjacent businesses via existing or temporary driveways throughout the construction period; approval of sidewalk closures by the affected agency having jurisdiction and closure of only one side of the street at a time; and if crosswalks are temporarily closed, pedestrians would be directed to use one that is in close proximity to a closed one.

Response to Comment BU36-6

Comment acknowledged. Chapter 3, Transportation Impacts and Mitigation, Section 4.3, Community and Neighborhood Impacts, and Section 4.15, Safety and Security, of the Draft EIS/EIR identified mitigation measures to provide for the safety of pedestrians in the areas of construction activity and maintain adequate crosswalks during construction. For example, special facilities such as handrails, fences, and walkways would be provided for the safety of pedestrians in areas where construction activities would impact sidewalk areas. Please refer to Response to Comment BU36-5, above, for additional examples.

Appropriate candidate mitigation measures identified in the Draft EIS/EIR have been refined and confirmed in the Mitigation Monitoring and Reporting Program for the Locally Preferred Alternative (Chapter 8) of this Final EIS/EIR.

Response to Comment BU36-7

Metro will ensure shuttle bus access to City National Plaza is maintained during construction. This mitigation measure has been added to the Mitigation Monitoring and Reporting Program for the Locally Preferred Alternative (Chapter 8) of this Final EIS/EIR.

Response to Comment BU36-8

Some land use types are more sensitive to noise than others. For example, parks, churches, and residences are typically more noise-sensitive than industrial and commercial areas. The noise analysis contained in Section 4.7, Noise and Vibration, of the Draft EIS/EIR and this Final EIS/EIR used the FTA noise impact criteria classification of sensitive land uses:

- Category 1: Buildings or parks where low noise is an essential element of their purpose (e.g., amphitheaters and concert pavilions)
- Category 2: Buildings where people normally sleep, including residences, hospitals, and hotels where nighttime sensitivity is assumed to be of utmost importance
- Category 3: Institutional land uses with primarily daytime uses that depend on low noise as an important part of operations (e.g., schools, libraries, churches, theaters, and places of study)

The City National Plaza and Towers is an office land use, which is not considered a sensitive land use.

As indicated in Section 4.7, Noise and Vibration, of this Final EIS/EIR, consistency with the goals of applicable local ordinances and implementation of Best Management Practices would ensure that noise and vibration levels associated with construction of the Fully Underground LRT Alternative (the Locally Preferred Alternative) would not result in a significant adverse noise impact. Given that the Locally Preferred Alternative would not result in an adverse noise impact during construction, mitigation is not required. The alignment would be constructed beneath Flower Street in the vicinity of the City National Plaza and Towers using cut and cover construction. Cut and cover construction would involve large bulldozers and drill rigs as the main sources of construction vibration. As indicated in Section 4.7, Noise and Vibration, vibration impacts (including ground-borne noise) associated with large bulldozers and drill rigs would be less than significant. Nonetheless, mitigation measures were included in the Supplemental EA/Recirculated Draft EIR Sections which would further reduce annoyance to sensitive land uses caused by ground-borne vibration. Since designation of a Locally Preferred Alternative, mitigation measures have been refined and confirmed for the Locally Preferred Alternative, which are listed in Section 4.7, Noise and Vibration, of this Final EIS/EIR, based on input received during the Draft EIS/EIR and Supplemental EA/Recirculated Draft EIR Sections public review periods. Mitigation measures for the Locally Preferred Alternative have been carried forward and included in the Mitigation Monitoring and Reporting Program for the Locally Preferred Alternative, Chapter 8, of this Final EIS/EIR.

Response to Comment BU36-9

Metro will coordinate with Thomas Properties Group, Inc. (TPG) regarding specific construction concerns. As indicated in Response to Comment BU36-3, above, building protection measures such as underpinning or ground improvement combined with a geotechnical monitoring program would be used to monitor and protect structures identified for such measures. In addition, a geotechnical investigation will be performed during final design for the proposed at-grade and below-grade structures and improvements associated with the Locally Preferred Alternative. The investigation will provide additional site-specific data to facilitate final design

for maintaining the integrity of existing structures under static and seismic loading and operational demands. Refer to Section 4.9, Geotechnical/Subsurface/Seismic/Hazardous Materials, of this Final EIS/EIR for further information regarding geotechnical mitigation measures.

Response to Comment BU36-10

Metro will ensure that detours around construction staging areas can sufficiently accommodate the pedestrian flow and transportation lines in the vicinity. Pedestrian and vehicular access to surrounding parcels will be maintained during operating hours throughout the construction phase.

Response to Comment BU36-11

Comment acknowledged. Metro will coordinate with TPG regarding specific construction concerns. During preparation of this Final EIS/EIR, Metro held meetings with community groups, which included TPG, and identified municipal leaders to guide them in the decision-making process as it relates to the proposed station locations, alignment options, and anticipated mitigation measures. Community input during these meetings has been taken into account in the refinement of the Locally Preferred Alternative and the Mitigation Monitoring and Reporting Program for the Locally Preferred Alternative (Chapter 8), which are presented in this Final EIS/EIR.

Appropriate candidate mitigation measures identified in the Draft EIS/EIR have been refined and confirmed in this Final EIS/EIR.

Dear Dolores,

Metro Regional Connector のLittle Tokyo　での建設計画で
２ND　Street　を通る「Fully underground Alternative」には
絶対反対です。

この話を聞いた時、すでに日系団体の話し合いもしたとの説明でしたが
実際に２ND　STREETで商売している私たちオーナーには
何の連絡も打診もなく、商売には全く影響のない人の意見が多く取り
入れられています。

今年に入りやっと色々な工事が終わりリトル東京に人の流れが
出てきこれからと言う時に、なぜ、店舗の多い２NDをわざわざ通る
必要があるのか、理解できません。

リトル東京の中心地である２ND　STで工事が行われる事は、お客さんに
大迷惑で、商売になりません。
お店を閉める所も出てくると思われます。

２NDだけは絶対に反対です。止めて下さい。お願い致します。

10-18-2010　　YOSHINOBU　MARUYAMA

To: Ms. Dolores Roybal Saltarelli
Metro Project Manager

From: Yoshinobu Maruyama, Owner
Shabu-Shabu House Restaurant
127 Japanese Village Plaza Mall
Los Angeles, CA 90012
(213) 680-3890

Dear Dolores,

With regard to the Little Tokyo construction plan for the Metro Regional Connector, I am absolutely opposed to the "Fully Underground Alternative" that passes under Second Street. When I heard about this, I was told that they had already spoken with Japanese-American groups, but in fact there had been no contact or discussion of any kind with us, the owners who actually do business on Second Street, and the opinions had been gathered mostly from people whose businesses would not be affected at all. 1

When this year began, various construction projects had finally finished, and the flow of people could be seen again in Little Tokyo, so I can't understand why at this time it is necessary to purposely go under Second Street, where there are many stores. Construction on Second Street, the heart of Little Tokyo, will be a great inconvenience for shoppers, making business difficult. I think some stores would close. It is specifically Second Street to which I am absolutely opposed. Please don't do this, I ask you. 2

October 18, 2010
Yoshinobu Maruyama

BU38

Responses to Comments from Shabu-Shabu House Restaurant, Maruyama, Yoshinobu

Response to Comment BU38-1

Opposition to the Fully Underground LRT Alternative is noted. The Metro Board of Directors voted on October 28, 2010 to designate the Fully Underground LRT Alternative as the Locally Preferred Alternative. Metro has performed extensive outreach activities to involve Little Tokyo stakeholders in the project development process. Metro has met with the Little Tokyo Business Association and the Little Tokyo Business Improvement District on multiple occasions to discuss the Regional Connector and the Fully Underground LRT Alternative, as documented in Chapter 7, Public and Agency Outreach, of the Draft EIS/EIR and this Final EIS/EIR. Advertisements regarding scoping meetings and community updates were printed in local newspapers, including Japanese language publications. Outreach staff has maintained a consistent presence in the community and has gone door-to-door to speak with business owners. Appropriate mitigation measures have been identified to address the impacts to businesses, and Metro has confirmed their implementation in the Mitigation Monitoring and Reporting Program for the Locally Preferred Alternative (Chapter 8) of this Final EIS/EIR.

Response to Comment BU38-2

As described in Chapter 2, Alternatives Considered, and Section 4.18, Construction Impacts, of this Final EIS/EIR, the Locally Preferred Alternative has been refined since publication of the Draft EIS/EIR. The refined alignment would not involve cut and cover construction on 2nd Street in Little Tokyo, thus eliminating the need for lengthy closures of the street and sidewalk. Short-term intermittent closures may still be needed, but these would be less frequent than with the non-refined alternative described in the Draft EIS/EIR. No surface disruption or impacts to businesses on 2nd Street in Little Tokyo are anticipated as a result of the passage of the tunnel boring machine. Mitigation measures targeted at supporting businesses during the construction period are provided in the Mitigation Monitoring and Reporting Program for the Locally Preferred Alternative (Chapter 8) of this Final EIS/EIR. It is Metro's goal to minimize impacts to businesses during construction.

Responses to Comments from Nishi Center, Mukai, Susan

Response to Comment BU39-1

Thank you for your comment. Support for the Underground Emphasis LRT Alternative is noted. The Metro Board of Directors voted on October 28, 2010 to designate the Fully Underground LRT Alternative as the Locally Preferred Alternative.

Response to Comment BU39-2

It is Metro's goal to minimize adverse impacts to the Little Tokyo community, including impacts to businesses. Metro will implement the mitigation measures proposed by the Little Tokyo Community Council and Little Tokyo Business Improvement District/Little Tokyo Business Association regarding business interruption shown in the Mitigation Monitoring and Reporting Program (Chapter 8) of this Final EIS/EIR. Metro will work with the Regional Connector Community Leadership Council to serve all businesses affected by Regional Connector construction.

Response to Comment BU39-3

It is Metro's goal to minimize adverse impacts to the Little Tokyo community, including impacts to businesses. Metro will implement the mitigation measures proposed by the Little Tokyo Community Council and Little Tokyo Business Improvement District/Little Tokyo Business Association regarding business interruption shown in the Mitigation Monitoring and Reporting Program (Chapter 8) of this Final EIS/EIR. Metro will work with the Regional Connector Community Leadership Council to serve all businesses affected by Regional Connector construction.

Response to Comment BU39-4

Metro understands the impacts that construction would have in the Little Tokyo community, and will work with the community to minimize impacts to businesses. During construction, Metro will minimize lane and sidewalk closures, and will provide adequate detours to maintain pedestrian flow. Temporary replacement parking will be provided during construction as needed to offset the impact of on-street and off-street parking removal. As part of temporary replacement parking efforts, Metro will provide two acres of land on the Mangrove property, located at the northeast corner of 1st and Alameda Streets, for the purposes of providing supplemental parking services, such as valet parking services during construction. Please refer to the Transportation Impacts and Environmental Justice sections of Chapter 8, Mitigation Monitoring and Reporting Program for the Locally Preferred Alternative, for more information regarding construction parking mitigation measures.

I strongly oppose the plan. 1

2nd street is a really important place for Japanese community & business. Long term constructing to separate Little Tokyo is unallowable for all Japanese, Japanes American & Japanese community. All people now in this area is against the plan. 2

Metro should listen to the opinions of Japanese groups. otherwise, we will take robust actions. 3

Responses to Comments from Teishokuya of Tokyo, Masuda, Etsuko

Response to Comment BU40-1

Comment acknowledged. It is noted that the commenter opposes the Regional Connector project.

Response to Comment BU40-2

Metro understands the importance of 2nd Street to Little Tokyo and will continue to work with the community to minimize adverse impacts. As described in Chapter 2, Alternatives Considered, and Section 4.18, Construction Impacts, of this Final EIS/EIR, the Locally Preferred Alternative has been refined since publication of the Draft EIS/EIR. The refined alignment would not involve cut and cover construction on 2nd Street in Little Tokyo, thus eliminating the need for lengthy closures of the street and sidewalk. Short-term intermittent closures may still be needed, but these would be less frequent than with the non-refined alternative described in the Draft EIS/EIR. No surface disruption or impacts to businesses on 2nd Street in Little Tokyo are anticipated as a result of the passage of the tunnel boring machine. It is Metro's goal to minimize construction impacts to the Little Tokyo community and its businesses. Support for a non-2nd Street alignment is noted. The Metro Board of Directors voted on October 28, 2010 to designate the Fully Underground LRT Alternative as the Locally Preferred Alternative.

Response to Comment BU40-3

Comment acknowledged. Metro has met and will continue to meet with the Little Tokyo community groups regarding the Regional Connector Transit Corridor project. During preparation of this Final EIS/EIR, Metro held meetings with community groups, which included the Little Tokyo community, and identified municipal leaders to guide them in the decision-making process as it relates to the proposed station locations, alignment options, and anticipated mitigation measures. Input from the community was incorporated into the refinement of the Locally Preferred Alternative and the mitigation measures presented in this Final EIS/EIR.

この計画に強く反対します。
私たちリトル東京にとって 2nd street はとても大切です。
そこを分断して何年も工事することなど絶対に許せません。
ビジネスコミュニティーにとって大打撃です。
全ての日本人、日系人、日系コミュニティーの方が大変怒ってます。
もし、この計画が進めば、私たちは断固として戦います。

I strongly opposed to this plan.
For those of us in Little Tokyo, 2nd Street is very important.
We absolutely cannot allow it to be blocked off and under construction for years.
That would be a big blow to the business community.
All Japanese, and Japanese-Americans, and the Japanese-American community, are terribly upset.
If this plan is pursued, we will fight against it with determination.

Responses to Comments from Joy Mart Restaurant, Masuda, Sotaro

Response to Comment BU41-1

Metro understands the importance of 2nd Street to Little Tokyo and will continue to work with the community to minimize adverse impacts. As described in Chapter 2, Alternatives Considered, and Section 4.18, Construction Impacts, of this Final EIS/EIR, the Locally Preferred Alternative has been refined since publication of the Draft EIS/EIR. The refined alignment would not involve cut and cover construction on 2nd Street in Little Tokyo, thus eliminating the need for lengthy closures of the street and sidewalk. Short-term intermittent closures may still be needed, but these would be less frequent than with the non-refined alternative described in the Draft EIS/EIR. No surface disruption or impacts to businesses on 2nd Street in Little Tokyo are anticipated as a result of the passage of the tunnel boring machine. It is Metro's goal to minimize construction impacts to the Little Tokyo community and its businesses. Opposition to the 2nd Street alignment is noted. The Metro Board of Directors voted on October 28, 2010 to designate the Fully Underground LRT Alternative as the Locally Preferred Alternative.

RE: Comments on Draft EIS/EIR for Regional Connector

Dear Ms. Roybal-Saltarelli:

The Little Tokyo Community Council (LTCC) appreciates the opportunity to comment on the Draft EIS/EIR for the proposed Regional Connector. The positive working relationship and open dialogue have helped the community actively participate in the process to date. We offer the following general comments, which are followed by specific comments on the EIS/EIR: 1

1. The LTCC strongly believes that the Fully Underground alternative is the only acceptable option as the Locally Preferred Alternative that addresses its concerns about the environmental, economic, social, and cultural impacts to the community. As such, it supports Metro's finding that "the Draft EIS/EIR does designate the Fully Underground LRT Alternative...as a staff recommended Preferred Alternative based on the technical analysis...and input received from the community." We concur that the Fully Underground Alternative "was developed to best address community concerns simultaneous with cost, operational, and design concerns." Further, the analysis in the EIS/EIR shows it is clearly the best performing alternative from a ridership, travel time savings, environmental, noise, safety, cost-effectiveness, and social impact perspective. It is also nearly the cheapest alternative to operate and maintain over time. Please note that our support for the Fully Underground alternative is contingent on satisfactory acceptance of LTCC's proposed mitigation measures identified on April 27, 2010. The other alternatives pose significant, disproportionate impacts on Little Tokyo that are unacceptable. 2

2. The EIS/EIR should correct its assessment of the impacts of the At-Grade Emphasis and Underground Emphasis alternatives. The draft understates the environmental impacts on the Little Tokyo community of the grade separations required along Alameda Street that would physically bisect the Little Tokyo community, potential impacts if tunnel boring were to be initiated from 2nd/Central, and the aesthetic impacts associated with at-grade LRT operations through our community. As such, these two alternatives would place disproportionate burdens on a minority community in the areas of Transit Service Equity Deterioration and Community and Neighborhood Impacts. 3

3. In its letter to Metro dated April 27, 2010, the LTCC strongly urged Metro to initiate tunnel boring activities from 2nd/Flower/Hope to minimize construction impacts on the Little Tokyo community. If Metro cannot commit to initiate TBM activities at 2nd/Flower/Hope until Preliminary Engineering is complete, the EIS/EIR should more clearly distinguish the extent and duration of construction impacts that could affect Little Tokyo if boring begins at 2nd/Central. This information is critical to determining whether the community will endure disproportionate impacts during construction activities. 4

4. While many mitigation measures are identified throughout the document, the recommendations from the LTCC are segregated as a package of candidate measures to be considered by Metro and FTA. Please confirm the process for approving mitigation measure recommendations and whether this differs from mitigation measures cited elsewhere in the document. 5

5. The LTCC calls for Metro to formalize an agreement with the Little Tokyo community that provides us with a substantial role in decision-making during the Preliminary Engineering, Final Design, and construction phases that addresses: 6

    a. Little Tokyo's formal involvement in the development and approval of mitigation measures for the Little Tokyo community,
    b. Little Tokyo's formal involvement in the monitoring of mitigation measures through the Mitigation Monitoring Plan,
    c. How to provide a sufficient safety net for Little Tokyo businesses that will be affected during construction,
    d. Redevelopment of the Office Depot block.

6. The Draft EIS/EIR does not reflect the language adopted by the LTCC on May 25, 2010 that included refinements to its comments on the pending environmental analysis. These changes stem from additional comments from the Little Tokyo community in late April and amend comments that were transmitted to Metro in our letter dated April 27, 2010: 7

    a. Expand the safety net for Little Tokyo businesses that will be affected during construction. This must include having Metro provide additional financial and other resources to the community and/or businesses to provide more targeted marketing, as well as financial compensation to local businesses for any loss in gross sales. The process for establishing eligibility, quantifying financial assistance or compensation, and related details would be established jointly between Metro and Little Tokyo stakeholders. 8
    b. Metro shall work with the Little Tokyo community businesses to ensure no adverse impacts to business operations prior to relocation of or protection of in-place utilities and during construction activities. The LTCC and Metro shall consider establishing a Business Interruption Committee that will streamline Metro's communication with the community, avoid adverse business interruptions, and ensure rapid resolution of unforeseen problems. This committee shall include local businesses and property owners. 9

Thank you for your consideration. We look forward to continuing to work with Metro to address appropriate mitigation measures that will address our community's concerns. 10

Sincerely,

Bill Watanabe
Chair, Little Tokyo Community Council

Encl. Detailed comments on Draft EIS/EIR

Little Tokyo Community Council

Detailed Comments

Executive Summary

7. The LTCC supports the statement that "the Draft EIS/EIR does designate the Fully Underground LRT Alternative...as a staff recommended Preferred Alternative based on the technical analysis...and input received from the community" (Page ES-5). We concur that it "was developed to best address community concerns simultaneous with cost, operational, and design concerns." Further, the analysis the EIS/EIR shows it is clearly the best performing alternative from a ridership, travel time savings, environmental, and social impact perspective. From the Little Tokyo community perspective, it is the only alternative that adequately addresses our concerns about environmental, economic, social, and cultural impacts to the community. The other alternatives pose significant disproportionate impacts on Little Tokyo. 11
8. The EIS/EIR incorrectly characterizes the impacts of the At-Grade analysis by understating its environmental impacts on the Little Tokyo community. Specifically, the project would place disproportionate burdens on a minority community in the areas of: 12
    a. Transit Service Equity Deterioration
    b. Community and Neighborhood Impacts.
9. The EIS/EIR incorrectly concludes that there would not be any significant unavoidable environmental justice impacts for the At-Grade Emphasis alternative. The EIS/EIR should conclude that the impacts are significant for two reasons: 13
    a. The grade separation of a vehicle underpass and pedestrian overpass at Temple and Alameda to route traffic under the rail tracks would physically divide Little Tokyo along Alameda. This would significant affect the cultural integrity of the community by separating the many temples and residents east of Temple from the core of Little Tokyo. The pedestrian overpass would be a significant barrier to elderly residents who travel east-west across Alameda.
    b. The grade separation plan is comparable to the Underground Emphasis alternative, which was found to have significant "Community and Neighborhood" impacts. The EIS/EIR should be revised to be consistent with this finding for the At-Grade emphasis alternative.

Chapter 1 (Purpose and Need)

10. The Draft EIS/EIR fails to acknowledge the existence of Little Tokyo in Section 1.4.2 (Project Area Ethnicity). Given its status as one of only three Japantowns in the nation and the environmental justice concerns that are important to Metro, Little Tokyo should be mentioned in the Purpose and Need chapter. 14

Chapter 2 (Alternatives Considered)

11. Page 2-21, Section 2.3.4.4. The analysis of pedestrian circulation impacts at Temple and Alameda Street from the At-Grade Emphasis alternative fails to adequately describe likely impacts. The construction of a pedestrian overpass to "minimize delays (of rail service) at the intersection of Temple and Alameda" comes at the expense of increasing travel time for pedestrians that must navigate the overpass to cross Alameda. Given the significant concentrations of elderly residents and merchants in the area, this will pose a significant impact on pedestrian circulation, particularly from temples and residences east of Alameda to the heart of Little Tokyo that lies west of Alameda. This represents a disproportionate impact on local residents and pedestrian circulation to accommodate reduced travel time for the regional Metro Rail system. The EIS/EIR should be revised to accurately portray the impact of pedestrian circulation. 15
12. Page 2-31, Section 2.3.6.4. The EIS/EIR understates the impact of the Underground Emphasis alternative on pedestrian circulation at Alameda Street by stating it will "require relatively small changes to surface traffic and pedestrian circulation patterns." The construction of a pedestrian overpass at 1st and Alameda comes at the expense of increasing travel time for pedestrians that must navigate the overpass to cross Alameda. Given the significant concentrations of elderly residents and merchants in the area, this will pose a significant impact on pedestrian circulation, particularly from temples and residences east of Alameda to the heart of Little Tokyo that lies west of Alameda. This represents a disproportionate impact on local residents and pedestrian circulation to accommodate reduced travel time for the regional Metro Rail system. The EIS/EIR should be revised to accurately portray the impact of pedestrian circulation. 16
13. Page 2-34, Section 2.4.5. The EIS/EIR remains silent on whether tunneling would involve single boring followed by a reverse boring in the other direction, use of two TBMs concurrently, or use of a single, wider boring. It is assumed that the EIS/EIR assumes the boring approach that would result in a worst-case scenario for construction impacts. 17
14. Page 2-38, Figure 2-13. The EIS/EIR depicts the block between 1st, 2nd, Central, and Alameda as being the site for an open cut. However, Metro has indicated that the existing development on the east side of Central between 1st and 2nd may be spared from demolition during construction. Given the orientation of any subway alignment under the property, every effort should be made to avoid demolishing existing buildings that front on 1st Street, including the former Café Cuba restaurant, Weiland's Brewery, and other nearby buildings. 18

Chapter 3 (Transportation Impacts and Mitigation)

15. Page 3-4, Section 3.1.3. The EIS/EIR should clarify that the assessment of parking impacts also considers off-street parking spaces that would be affected by the construction or operation of the project. Chapter 4 in fact accounts for off-street parking. 19
16. Page 3-4, Section 3.1.4. The determination of significance for pedestrian circulation should be clarified to include detours that might lengthen bicycle commutes or pedestrian routes or travel time..." 20
17. Section 3.2.2.1, Table 3-9. Please confirm the existing LOS B and C at Alameda/1st Street in the morning and evening peaks, respectively. These don't correspond with empirical observations. 21

If these are correct, please note that this is due in large part to the closure of westbound lanes over the Los Angeles River. 21 cont'd

18. Page 3-8, Table 3-3. The overview of ridership on bus lines servicing the project area omits LADOT Commuter Express 438, DASH, and possibly other LADOT lines. If Table 3-3 is intended to exclusively identify Metro lines, it should be labeled as such. 22

19. Page 3-17, Section 3.2.3. As noted earlier, any assessment of existing parking conditions in the study area must include an inventory of any parking facilities that would be affected by the proposed construction or operation of the project. This includes off-street spaces on the block bounded by 1st, 2nd, Central, and Alameda. Chapter 4 in fact accounts for off-street parking. 23

20. Page 3-37, Section 3.3.3.2. As noted earlier, the operation of an At-Grade Emphasis LRT system would require construction of a pedestrian overpass at Temple and Alameda that would impact the length and travel time for pedestrian travel. Given the high concentration of elderly residents in Little Tokyo, this impact on travel times would be even greater. This impact should be considered significant. 24

21. Section 3.3.3.2.2, Figure 3-7. Please explain how the intersection of Alameda/1st Street improves over existing conditions in the year 2035. This "beneficial change in LOS" is counterintuitive given the extent of growth projected in the study area through 2035. 25

22. Section 3.3.4.2.2, Figure 3-9. Please explain how the intersection of Alameda/1st Street improves over existing conditions in the year 2035. This "beneficial change in LOS" is counterintuitive given the extent of growth projected in the study area through 2035. 26

23. Section 3.3.4.2.2. Although this section concludes that the alternative would have a significant impact because of the seven intersections that would be impacted, the analysis needs to analyze and discuss the impact that the creation of the portal and the at-grade alignment to access the station at Alameda/1st. This is a huge impact on the area and should be discussed in terms of the operational impact this configuration has on the local street system. The actual impacted intersections in terms of LOS is minor in comparison to this potential impact. It must be evaluated in terms of operations, safety, access, etc., not just LOS. 27

24. Page 3-43, Section 3.3.4.2.3. In the analysis of the Underground Emphasis, the EIS/EIR fails to account for the demolition of off-street parking spaces on the block bounded by 1st, 2nd, Central, and Alameda. Removal of these spaces will likely have an impact on existing and proposed parking in Little Tokyo and should be analyzed. Chapter 4 in fact accounts for off-street parking. 28

25. Page 3-44, Section 3.3.4.2.4. The operation of an Underground Emphasis LRT system would require construction of a pedestrian overpass at 1st and Alameda that would impact the length and travel time for pedestrian travel. Given the high concentration of elderly residents in Little Tokyo, this impact on travel times would be even greater. This impact should be considered significant. 29

26. Page 3-47, Section 3.3.5.1.1. The EIS/EIR should clarify whether construction of the Fully Underground alternative would require temporary closure of lanes on 2nd Street and Central for 30

relocation of utilities and cut-and-cover activities. The Draft does not indicate closure will be needed on these two streets. 30 cont'd

27. Page 3-48, Section 3.3.5.1.2. The EIS/EIR remains silent about where tunnel boring activities would be initiated, stating that "[r]outes and disposal sites will be confirmed during the preliminary engineering phase..." If Metro cannot confirm that tunnel boring will not be initiated from Little Tokyo, the EIS/EIR should assume a worst-case scenario of impacts for Little Tokyo so that the full extent of traffic impacts, including dirt hauling operations, during construction is understood. 31

28. Page 3-49, Section 3.3.5.1.3. In the analysis of the Fully Underground alternative, the EIS/EIR fails to account for the demolition of off-street parking spaces on the block bounded by 1st, 2nd, Central, and Alameda during construction. Removal of these spaces will likely have an impact on existing and proposed parking in Little Tokyo and should be analyzed. 32

29. Page 3-50, Section 3.3.5.2.2, Figure 3-11. Please explain how the intersection of Alameda/1st Street improves over existing conditions in the year 2035. This "beneficial change in LOS" is counterintuitive given the extent of growth projected in the study area through 2035. 33

30. Page 3-51, Section 3.3.5.2.2. Please explain how the intersection of Alameda/1st Street improves over existing conditions in the year 2035. This "beneficial change in LOS" is counterintuitive given the extent of growth projected in the study area through 2035. 34

31. Page 3-51, Section 3.3.5.2.2. It should be noted that there are only three impacted intersections from this alternative, none of them in Little Tokyo. From the LTCC's perspective, this alternative has no impacts on Little Tokyo. 35

32. Page 3-51, Section 3.3.5.2.3. In the analysis of the Fully Underground alternative, the EIS/EIR fails to account for the demolition of off-street parking spaces on the block bounded by 1st, 2nd, Central, and Alameda during operations. Removal of these spaces will likely have an impact on existing and proposed parking in Little Tokyo and should be analyzed. Chapter 4 in fact accounts for off-street parking. 36

33. Section 3.4.1.3. The analysis of parking and mitigation measures is too qualitative and conceptual to accurately gauge project impacts. There needs to be a much more detailed description of at least the mitigation options that should be considered for this program. The EIS/EIR should be more quantitative in the parking analysis, with the locations and the type of users for the various types of parking provided, both for the interim during construction and for the permanent during operation of the system. It is impossible to evaluate the parking program that does not discuss any of these items 37

Chapter 4 (Environmental Analysis, Consequences, and Mitigation)

34. Page 4-23, Section 4.2.3.4.3. LTCC agrees that the removal of off-street parking spaces from the Underground Emphasis alternative could be an "adverse effect with respect to environmental justice" if impacts are not fully mitigated. 38

35. Page 4-30, Section 4.2.4.4. While the issue of loading spaces at JANM is discussed in Chapter 3, the issue should be cited again in the displacement discussion, with appropriate mitigation included in this section. 39

36. Page 4-42, Section 4.3.2.4.6. The EIS/EIR should note that the Little Tokyo community exists on both the west and east sides of Alameda Street. 40

37. Page 4-43, Table 4.3-4. The overview of impacts to community and neighborhoods should be revised to reflect:

    a. The At-Grade Emphasis LRT can physically divide the Little Tokyo community because of the physical operation of LRT trains along surface streets that visually bisect these thoroughfares and because of the physical grade separation at Temple and Alameda that will create physical barriers to cross Alameda Street by walking or bicycling. 41
    b. The Underground Emphasis LRT can physically divide the Little Tokyo community because of the physical grade separation at 1st and Alameda that will create physical barriers to cross Alameda Street by walking or bicycling. 42
    c. The At-Grade Emphasis LRT can significant impair community mobility in Little Tokyo through the physical grade separation at Temple and Alameda that will create physical barriers to cross Alameda Street by walking or bicycling. 43
    d. The Underground Emphasis LRT can significant impair community mobility in Little Tokyo because of the physical grade separation at 1st and Alameda that will create physical barriers to cross Alameda Street by walking or bicycling. 44

38. Page 4-45, Section 4.3.3.4. While the EIS/EIR does not commit the project to initiate TBM activities at a particular location, it does confirm that construction impacts would be more significant in the Financial District and Little Tokyo. Please distinguish the extent of community and neighborhood impacts in Little Tokyo from dirt hauling and other operations if: a) TBM begins at 2nd/Central or near Bunker Hill. 45

39. Page 4-311, Section 4.17.5. The Draft EIS/EIR does not reflect the language adopted by the Little Tokyo Community Council (LTCC) on May 25, 2010 that included refinements to its comments on the pending environmental analysis. These changes stem from additional comments from the Little Tokyo community in late April and amend comments that were transmitted to Metro in our letter dated April 27, 2010. The approved changes are shown below in <u>underline</u>. 46

    c. Expand the safety net for Little Tokyo businesses that will be affected during construction. <u>This must include</u> having Metro provide additional financial and other resources to the community and/or businesses to provide more targeted marketing, <u>as well as financial compensation to local businesses for any loss in gross sales. The process for establishing eligibility, quantifying financial assistance or compensation, and related details would be established jointly between Metro and Little Tokyo stakeholders</u>. 47
    d. Metro shall work with the Little Tokyo community businesses to ensure no adverse impacts to business operations prior to relocation of or protection of in-place utilities <u>and during construction activities. The LTCC and Metro shall consider establishing a Business Interruption Committee that will streamline Metro's communication with the community and avoid adverse business interruptions. This committee shall include local businesses and property owners</u>. 48

40. Page 4-311, Section 4.17.5. Please add the following mitigation measure to the list of options suggested by the LTCC for inclusion in the Final EIS/EIR:
    a. Provide free business support technical assistance to local businesses on strategies for business development that can minimize any adverse impacts of construction. This can include, but not be limited to, assistance with marketing, accounting, or finance. 49

41. Page 4-311, Section 4.17.5. While many mitigation measures are identified throughout the document, the recommendations from the LTCC are segregated as a package of candidate measures to be considered by Metro and FTA. Please confirm the process for approving mitigation measure recommendations and whether this differs from mitigation measures cited elsewhere in the document. 50

Chapter 6 (Cost and Performance Considerations)

42. Please note that the capital costs of the Fully Underground alternative include all stations originally considered in the initial evaluations. Any efforts to reduce capital costs for this alternative should focus on opportunities for open cut stations, as well as eliminating any of the three stations to the west, including Flower Street between 4th and 5th, not on any changes to the fully underground system design at the proposed Little Tokyo station. 51

43. LTCC concurs with the EIS/EIR's finding that the operating and maintenance costs for the Fully Underground alternative are lower than the TSM and At-Grade Emphasis alternatives. 52

44. Page 6-19, Table 6-15. The overview of the mobility benefits of each alternative clearly confirm that the Fully Underground alternative provides the most benefit in reducing congestion countywide. 53

45. Page 6-21, Table 6-16. The assessment of transit system user benefits for all alternatives confirms that the Fully Underground alternative provides the most "bang for the buck" and will be most competitive in Metro's pursuit of Federal Transit Administration New Starts funding. 54

46. Page 6-22, Section 6.6.1. The description of the evaluation methodology should acknowledge the importance of providing proportional benefits to local communities like Little Tokyo that are affected by construction to benefit the regional transit system. 55

Chapter 7 (Public Agency Outreach)

47. Page 7-7. In the list of stakeholders consulted, please add the Little Tokyo Community Council under Community Organizations, Neighborhood Groups, and Homeowner Associations. 56

48. Page 7-21. Please note that the LTCC's PCPC is the Planning and Cultural Preservation Committee. 57

CN1

Responses to Comments from Little Tokyo Community Council, Watanabe, Bill

Response to Comment CN1-1

Comment acknowledged. Please refer to Responses to Comments CN1-2 through CN1-57, below, for detailed responses to concerns raised by the commenter.

Response to Comment CN1-2

Support for the Fully Underground LRT Alternative and the Little Tokyo Community Council proposed mitigation measures is noted. The Metro Board of Directors voted on October 28, 2010 to designate the Fully Underground LRT Alternative as the Locally Preferred Alternative.

Response to Comment CN1-3

The impacts of the proposed pedestrian bridge and roadway underpass in Little Tokyo were discussed in Sections 4.17.3.3.2 and 4.17.3.4.2 of the Draft EIS/EIR and this Final EIS/EIR, respectively. The potential impacts of beginning tunnel boring machine (TBM) operations at 2nd and Central were described in Section 4.18.3.4 of the Draft EIS/EIR. Impacts were adequately analyzed in the Draft EIS/EIR. Disproportionate impacts on the Little Tokyo community were analyzed in Section 4.17, Environmental Justice, of the Draft EIS/EIR and this Final EIS/EIR. The Metro Board of Directors voted on October 28, 2010 to designate the Fully Underground LRT Alternative as the Locally Preferred Alternative. The refined Locally Preferred Alternative would not involve construction of any pedestrian bridges or roadway underpasses in Little Tokyo, and would not involve starting TBM operations at 2nd and Central as indicated in Section 4.17.3.5 of this Final EIS/EIR. TBM operations would instead begin at the Mangrove property, which is farther from the center of Little Tokyo and would involve fewer impacts.

Response to Comment CN1-4

Comment acknowledged. As indicated in Section 4.18, Construction Impacts, of the Draft EIS/EIR and this Final EIS/EIR, a range of durations, 2-4 months for the TBM insertion site and 24-48 months for the 2nd Street TBM tunnel, was assumed for tunneling activities at both insertion site options. These ranges are conservative estimates. Disproportionate impacts associated with each alternative were discussed in Section 4.17, Environmental Justice, of the Draft EIS/EIR and this Final EIS/EIR.

The small size of the 2nd/Hope Street station site would require a substantial portion of construction staging activities to occur in the surrounding streets, necessitating longer downtown street closures and increased cut and cover activities. This would have the effect of reducing mobility downtown and could deter visitors from frequenting many downtown communities, including Little Tokyo. In addition, the 1st/Central Avenue station site in Little Tokyo would need to be used as the TBM receiving site if the TBMs are inserted at the 2nd/Hope Street station site.

Based on comments received on the Draft EIS/EIR and input received from community meetings held during preparation of this Final EIS/EIR, the TBM insertion site options at 2nd/Central Avenue station and the 2nd/Hope Street station are no longer being considered. Instead the vacant property at the northeast corner of 1st and Alameda Streets, formerly known as the Mangrove Site, would be used as the insertion site. The TBM would be inserted

approximately 700 feet from the originally proposed 2nd/Central Avenue insertion area, which would reduce the intensity of construction on the block bounded by 1st Street, Central Avenue, 2nd Street, and Alameda Street and result in fewer acquisitions. Tunnel boring activities from this site would proceed farther down Flower Street to 4th Street, instead of ending at the proposed 2nd/Hope Street station. Spoils would be removed within the Mangrove property, and trucks would be routed to the east and/or north to reach the freeway, and would not pass through Little Tokyo. Section 4.18, Construction Impacts, of this Final EIS/EIR contains further detail regarding estimated construction durations, construction scenarios, and tunnel boring operations at the Mangrove property. Chapter 3, Transportation Impacts and Mitigation, and Chapter 4, Environmental Analysis, Consequences, and Mitigation, of the Draft EIS/EIR have been revised based on the new TBM insertion site in this Final EIS/EIR. A portion of the Mangrove property was identified for construction staging in the Draft EIS/EIR. Inserting the TBM at the Mangrove property would not result in new significant impacts or substantially increase the severity of impacts previously identified in the Draft EIS/EIR.

Worksite Traffic Control Plans will be developed in coordination with the Los Angeles Department of Transportation and presented to the community prior to construction activities. Metro will provide the community with updates regarding the construction schedule prior to and during construction.

Response to Comment CN1-5

The mitigation measure recommendations were segregated in the Draft EIS/EIR because they are a distinct part of the environmental justice outreach process. Like all other appropriate mitigation measures in the Draft EIS/EIR, feasible measures from the Little Tokyo Working Group recommendations have been incorporated into the Mitigation Monitoring and Reporting Program for the Locally Preferred Alternative (Chapter 8). The Mitigation Monitoring and Reporting Program for the Locally Preferred Alternative, Chapter 8, contains final mitigation measures for the Locally Preferred Alternative; the Mitigation Monitoring and Reporting Program will be approved by the Metro Board of Directors upon certification of this Final EIS/EIR. These mitigation measures will also be included in a Record of Decision subsequently issued by FTA. Metro will formally commit to implement all mitigation measures in the Mitigation Monitoring and Reporting Program for the Locally Preferred Alternative upon certification of this Final EIS/EIR and issuance of the Record of Decision by FTA.

Response to Comment CN1-6

Metro intends to undertake all of the listed activities. The Mitigation Monitoring and Reporting Program for the Locally Preferred Alternative (Chapter 8) of this Final EIS/EIR and Record of Decision to be issued by FTA are the formalized commitments to implement mitigation measures. Metro will involve the community throughout the project process. Based on the refinements to the Locally Preferred Alternative, only the northern portion of the block bounded by 1st Street, Central Avenue, 2nd Street, and Alameda Street would need to be acquired as part of the Locally Preferred Alternative for the 1st/Central Avenue station site. The Señor Fish, Weiland Brewery, associated parking, and the former Café Cuba (The Spice Table) would still need to be displaced. However, the other businesses on that block would remain, including the Office Depot and associated parking.

Response to Comment CN1-7

Comment acknowledged. The refinements identified in this comment and adopted by the Little Tokyo Community Council on May 25, 2010 have been included in the list of potential candidate mitigation measures developed by the Little Tokyo Working Group for the Fully Underground LRT Alternative in Section 4.17.5 of the Draft EIS/EIR as shown in the bullet points below. Metro evaluated these for incorporation into the list of final mitigation measures in Section 4.17.4.3 of this Final EIS/EIR.

- Expand the safety net for Little Tokyo businesses that will be affected during construction. This must include~~by~~ having Metro provide additional financial and other resources to the community and/or businesses to provide more targeted marketing~~.~~, as well as financial compensation to local businesses for any loss in gross sales. The process for establishing eligibility, quantifying financial assistance or compensation, and related details shall be established jointly between Metro and Little Tokyo stakeholders.

- Metro shall work with the Little Tokyo community businesses to ensure no adverse impacts to business operations prior to relocation of or protection of in-place utilities~~.~~ and during construction activities. The LTCC and Metro shall consider establishing a Business Interruption Committee that will streamline Metro's communication with the community, avoid adverse business interruptions, and ensure rapid resolution of unforeseen problems. This committee shall include local businesses and property owners.

Response to Comment CN1-8

This mitigation measure has been recorded in Section 4.17.4.2 of this Final EIS/EIR as one of the mitigation measures suggested by the Little Tokyo community. Metro has identified measures in the Mitigation Monitoring and Reporting Program for the Locally Preferred Alternative (Chapter 8) of this Final EIS/EIR that will provide support for the Little Tokyo businesses. This could take the form of in-kind advertising, Metro-sponsored coupons, city-wide advertising that Little Tokyo is open for business during construction, and similar supportive measures.

Response to Comment CN1-9

This refinement, which was adopted by the Little Tokyo Community Council on May 25, 2010, to the list of potential candidate mitigation measures developed by the Little Tokyo Working Group for the Fully Underground LRT Alternative has been included in Section 4.17.4.2 of this Final EIS/EIR. Please refer to Response to Comment CN1-7, above. The final mitigation measures are shown in Section 4.17.4.3 of this Final EIS/EIR.

In addition, Metro will create a Regional Connector Community Leadership Council, consisting of local business and property owners, to streamline Metro's communication with all communities affected by the project and respond to their concerns during construction of the Locally Preferred Alternative.

Response to Comment CN1-10

Comment acknowledged. Metro has met and will continue to meet with the Little Tokyo community groups regarding the Regional Connector Transit Corridor project. During preparation of this Final EIS/EIR, Metro held meetings with community groups, which included

the Little Tokyo community, and identified municipal leaders to guide them in the decision-making process as it relates to the proposed station locations, alignment options, and anticipated mitigation measures. Input from the community was incorporated into the refinement of the Locally Preferred Alternative and the mitigation measures presented in this Final EIS/EIR.

Response to Comment CN1-11

Thank you for your comment. Support for the Fully Underground LRT Alternative is noted. The Metro Board of Directors voted on October 28, 2010 to designate the Fully Underground LRT Alternative as the Locally Preferred Alternative.

Response to Comment CN1-12

The At-Grade Emphasis LRT Alternative would improve transit service in Little Tokyo by increasing the number of destinations reachable with a one-seat ride from the existing Little Tokyo/Arts District Station. The disproportionate adverse community and neighborhood impacts that the At-Grade Emphasis LRT Alternative would cause in Little Tokyo were documented in Section 4.17.3.3 of the Draft EIS/EIR and this Final EIS/EIR. This alternative is not being pursued for further study. The Metro Board of Directors voted on October 28, 2010 to designate the Fully Underground LRT Alternative as the Locally Preferred Alternative.

Response to Comment CN1-13

None of the proposed alternatives would have significant adverse community or neighborhood impacts remaining after mitigation, as documented in Table 4.3-4 of the Draft EIS/EIR and this Final EIS/EIR. However, both the At-Grade Emphasis LRT Alternative's and Underground Emphasis LRT Alternative's Alameda Street underpass and pedestrian bridge would result in disproportionate adverse environmental justice impacts, as reported in Sections 4.17.3.3.2 and 4.17.3.4.2 of the Draft EIS/EIR and this Final EIS/EIR. The proposed pedestrian bridges would be compliant with the Americans with Disabilities Act, and would have elevator access for elderly persons who are unable to use the escalators or stairs. Neither the At-Grade Emphasis LRT Alternative nor the Underground Emphasis LRT Alternative are being pursued for further study. The Metro Board of Directors voted on October 28, 2010 to designate the Fully Underground LRT Alternative as the Locally Preferred Alternative.

Response to Comment CN1-14

Section 1.4.2 of the Draft EIS/EIR and this Final EIS/EIR identified populations of Asian, African-American, White, and Hispanic populations in the project area based on census demographic data. The importance of Little Tokyo as one of the three Japantowns in the nation was appropriately discussed in Section 4.17.2 of the Draft EIS/EIR and this Final EIS/EIR.

Response to Comment CN1-15

The design of the pedestrian bridge would have incorporated elevators to provide access to senior citizens and disabled persons. The underpass on Alameda Street would reduce vehicular traffic at the intersection, which would be beneficial to all pedestrians. A pedestrian bridge in Little Tokyo is included only in the At-Grade Emphasis LRT Alternative and the Underground Emphasis LRT Alternative. The Metro Board of Directors voted on October 28, 2010 to

designate the Fully Underground LRT Alternative as the Locally Preferred Alternative, which does not include an underpass or pedestrian bridge in Little Tokyo.

Response to Comment CN1-16

Please refer to Response to Comment CN1-15, above.

Response to Comment CN1-17

Comment acknowledged. Section 2.4.5 of the Draft EIS/EIR and this Final EIS/EIR described typical underground construction using TBM. All TBM options were discussed in the Draft EIS/EIR because all options were a possible construction method depending on the alternative. The Draft EIS/EIR analyzed the most conservative TBM scenario for each environmental resource area. Based on further study, it was determined that one larger TBM would not be used during construction. The tunnels could be constructed using one TBM inserted and then transported back to the original insertion site and re-inserted; or two TBMs would be used, with the second machine inserted slightly later than the first TBM and both are pulled from the site, with no need for re-inserting.

Response to Comment CN1-18

Metro has made refinements to the Locally Preferred Alternative in response to community input. The refinements would greatly reduce impacts to businesses. The refined alternative would not involve cut and cover construction on 2nd Street, and would minimize acquisitions on the block bounded by 1st Street, Central Avenue, 2nd Street, and Alameda Street. The majority of parking spaces and businesses, including the Office Depot, on this block would not need to be acquired. However, Señor Fish, Weiland Brewery and the former Café Cuba (The Spice Table) would still need to be displaced.

Response to Comment CN1-19

Comment acknowledged. Off-street parking impacts were analyzed in Section 4.2, Displacement and Relocation, of the Draft EIS/EIR and this Final EIS/EIR. The following reference has been added to Section 3.1.3 of this Final EIS/EIR:

Evaluation of potential parking impacts included consideration of:

- The availability of parking within one-half mile walking distance; and
- The availability of loading zones in relation to the location of commercial enterprises.

Refer to Section 4.2, Displacement and Relocation, for analysis of off-street parking impacts.

Response to Comment CN1-20

Comment acknowledged. Travel time is already taken into account under the threshold. If bicycle commutes or pedestrian routes are lengthened, the time to travel along those commutes or routes would also lengthen. Section 3.1.4 of this Final EIS/EIR has been modified as follows:

- Detours that might lengthen bicycle commutes or pedestrian routes (which would increase travel time); and

Response to Comment CN1-21

The level of service data in Section 3.2.2.1 of the Draft EIS/EIR is correct, per the on-site traffic counts performed by Metro. These counts are supplemented with traffic data from before the bridge closure in order to accurately gauge the potential impacts of the Regional Connector.

Response to Comment CN1-22

Comment acknowledged. The title of Table 3-3 has been modified to read:

Table 3-3. Average Daily Ridership on Metro Bus Lines Serving the Project Area (2009).

Response to Comment CN1-23

Comment acknowledged. Off-street parking impacts were analyzed in Section 4.2, Displacement and Relocation, of the Draft EIS/EIR and this Final EIS/EIR. The following reference has been added to Section 3.2.3 of this Final EIS/EIR:

Along the majority of the proposed build alternative alignments, parking regulations permit on-street parking in one or both directions during the AM and PM peak hours. Refer to Section 4.2, Displacement and Relocation, for analysis of off-street parking impacts.

Response to Comment CN1-24

The pedestrian bridge would lengthen crossings of Alameda Street, but this would be offset by eliminating the need to wait for a walk signal. Pedestrian safety would also be improved because the bridge would reduce the existing potential for conflicts between automobiles and pedestrians. The bridge would include elevators and escalators for elderly residents, and would be fully compliant with the Americans with Disabilities Act. The Metro Board of Directors voted on October 28, 2010 to designate the Fully Underground LRT Alternative as the Locally Preferred Alternative, which does not include an underpass or pedestrian bridge in Little Tokyo.

Response to Comment CN1-25

Figure 3-7 of the Draft EIS/EIR and this Final EIS/EIR shows that level of service at 1st and Alameda would decline under the At-Grade Emphasis LRT Alternative. The Metro Board of Directors voted on October 28, 2010 to designate the Fully Underground LRT Alternative as the Locally Preferred Alternative.

Response to Comment CN1-26

Level of service at 1st and Alameda would improve under the Underground Emphasis LRT Alternative due to the new underpass. The new underpass at 1st and Alameda is part of the Underground Emphasis LRT Alternative. The Metro Board of Directors voted on October 28, 2010 to designate the Fully Underground LRT Alternative as the Locally Preferred Alternative.

Response to Comment CN1-27

The analysis in Section 3.3.4.2.2 of the Draft EIS/EIR and this Final EIS/EIR assumes the presence of the portal and at-grade tracks at 1st and Alameda. Traffic circulation impacts related to the construction of the portal were discussed in Section 3.3.4.1.2 of the Draft EIS/EIR and this Final EIS/EIR. These impacts pertain to the Underground Emphasis LRT Alternative. The Metro

Board of Directors voted on October 28, 2010 to designate the Fully Underground LRT Alternative as the Locally Preferred Alternative.

Response to Comment CN1-28

Comment acknowledged. Off-street parking impacts were analyzed in Section 4.2, Displacement and Relocation, of the Draft EIS/EIR and this Final EIS/EIR. The following reference has been added to Section 3.3.4.2.3 of this Final EIS/EIR:

The parking impacts identified under this alternative would be adverse only in the Little Tokyo community portion of the alignment, but even there ~~they~~ impacts would be less than significant after implementation of proposed mitigation. Refer to Section 4.2, Displacement and Relocation, for analysis of off-street parking impacts.

Response to Comment CN1-29

The pedestrian bridge would lengthen crossings of Alameda Street, but this would be offset by eliminating the need to wait for a walk signal. Pedestrian safety would also be improved because the bridge would reduce the existing potential for conflicts between automobiles and pedestrians. The bridge would include elevators and escalators for elderly residents, and would be fully compliant with the Americans with Disabilities Act. The Metro Board of Directors voted on October 28, 2010 to designate the Fully Underground LRT Alternative as the Locally Preferred Alternative, which does not include an underpass or pedestrian bridge in Little Tokyo.

Response to Comment CN1-30

Temporary lane closures would be needed on 2nd Street and a portion of Central Avenue between 1st and 2nd Streets for relocation of utilities and cut and cover activities for proposed stations. Refinement of the Locally Preferred Alternative would reduce the amount of cut and cover construction needed on 2nd Street. The Draft EIS/EIR indicated this in Section 4.18.2.2.

Response to Comment CN1-31

Comment acknowledged. At the time the Draft EIS/EIR was circulated for public review, both TBM insertion sites were being considered. Both TBM insertion sites were analyzed in the Draft EIS/EIR where appropriate. On October 28, 2010, the Metro Board of Directors voted to designate the Fully Underground LRT Alternative as the Locally Preferred Alternative. Based on comments received on the Draft EIS/EIR and input received from community meetings held during preparation of this Final EIS/EIR, the TBM insertion site options at 2nd/Central Avenue station and 2nd/Hope Street station are no longer being considered. Instead, the vacant property to the northeast of 1st and Alameda Streets, formerly known as the Mangrove Site, would be used as the insertion site. Please refer to Response to Comment CN1-4, above. Please refer to Section 4.18, Construction Impacts, of this Final EIS/EIR for further detail regarding tunnel boring operations at the Mangrove property. Chapter 3, Transportation Impacts and Mitigation, and Chapter 4, Environmental Analysis, Consequences, and Mitigation, of the Draft EIS/EIR have been revised in this Final EIS/EIR based on the new TBM insertion site. A portion of the Mangrove property was identified for construction staging in the Draft EIS/EIR.

Response to Comment CN1-32

Comment acknowledged. Off-street parking impacts were analyzed in Section 4.2, Displacement and Relocation, of the Draft EIS/EIR and this Final EIS/EIR. The following reference has been added to Section 3.3.5.1.3 of this Final EIS/EIR:

Potential impacts to available parking during construction of the ~~Fully Underground LRT~~ LPA would result in an adverse impact only in the Little Tokyo community portion of the alignment~~.~~; however, even within Little Tokyo ~~but even there~~ the potential impact would be less than significant after implementation of ~~proposed~~ the final mitigation measures in Section 3.4.2 and Chapter 8. Refer to Section 4.2, Displacement and Relocation, for analysis of off-street parking impacts.

Response to Comment CN1-33

Level of service at 1st and Alameda would improve under the Locally Preferred Alternative due to the at-grade light rail tracks being removed from service. Trains would no longer pass through the intersection, thereby freeing up cycle time for auto traffic.

Response to Comment CN1-34

Level of service at 1st and Alameda would improve under the Locally Preferred Alternative due to the at-grade light rail tracks being removed from service. Trains would no longer pass through the intersection, thereby freeing up cycle time for auto traffic.

Response to Comment CN1-35

Comment acknowledged. The following note has been incorporated in the fourth paragraph of Section 3.3.5.2.2 of this Final EIS/EIR.

Only one intersection during the AM peak hour and only three intersections during the PM peak hour would experience a significant adverse impact from the ~~Fully Underground LRT Alternative~~ LPA. It should be noted, none of the adversely impacted intersections are located in Little Tokyo.

Response to Comment CN1-36

Comment acknowledged. Off-street parking impacts were analyzed in Section 4.2, Displacement and Relocation, of the Draft EIS/EIR and this Final EIS/EIR. The following reference has been added to Section 3.3.5.2.3 of this Final EIS/EIR:

The on-street parking impacts identified under ~~this alternative~~ the LPA would not be adverse. Only 13 on-street parking spaces would be displaced, in an area with multiple off-street garages. Also, the parking spaces would be replaced by access points to a new underground light rail station, and the improved transit access would offset the effects of the lost parking. Therefore, the on-street parking impacts would not be adverse and would be less than significant. Refer to Section 4.2, Displacement and Relocation, for analysis of off-street parking impacts.

Response to Comment CN1-37

The Mitigation Monitoring and Reporting Program for the Locally Preferred Alternative (Chapter 8) of this Final EIS/EIR identifies specific replacement parking sites and mitigation measures to

offset parking impacts during construction. This includes two acres of land on the Mangrove property, located at the northeast corner of 1st and Alameda Streets, for the purposes of providing supplemental parking services, such as valet parking services during construction. Preliminary drafts of the Mitigation Monitoring and Reporting Program were submitted to the Little Tokyo Working Group for review. Some demand for parking in the long term would be offset by the introduction of improved light rail service into the community.

Response to Comment CN1-38

Comment acknowledged.

Response to Comment CN1-39

Chapter 3, Transportation Impacts and Mitigation, of the Draft EIS/EIR and this Final EIS/EIR, discusses transportation circulation impacts. Impacts to the loading spaces at the Japanese American National Museum were considered in the analysis presented in Section 3.3.5.1.3 of the Draft EIS/EIR and this Final EIS/EIR. Impacts to the museum itself are non-transportation impacts, and were appropriately discussed in Section 4.2.4.4 of the Draft EIS/EIR.

Response to Comment CN1-40

Comment acknowledged. The third paragraph of Section 4.3.2.4.6 of this Final EIS/EIR has been modified to read:

Little Tokyo, which exists to the east and west of Alameda Street, contains a variety of important cultural venues and resources including the Japanese American National Museum, the Jodo Shu Betsuin Temple, the Los Angeles Hompa Hongwanji Temple, and the Japanese-American Cultural and Community Center.

Response to Comment CN1-41

As indicated in Section 4.3, Community and Neighborhood Impacts, and Appendix O, Community and Neighborhood Impacts Technical Memorandum, of the Draft EIS/EIR and this Final EIS/EIR, the At-Grade Emphasis LRT Alternative would not physically divide an established community. Automobiles, pedestrians, and bicycles would still be able to cross the alignment at roadway intersections to access the communities to the north and south. At the intersection of Temple and Alameda Streets in the Little Tokyo community, the addition of an automobile underpass would facilitate movement of traffic on Alameda Street by allowing it to travel below the intersection without stopping and, thus, enhancing community mobility. A pedestrian bridge would also be located where the tracks would cross Alameda Street, which would allow pedestrians and bicyclists to cross the street. The Underground Emphasis LRT Alternative would not create a barrier that would impede vehicle, bicycle, or pedestrian access. Vehicle, bicycle, and pedestrian access at the intersection of 1st and Alameda Streets would be maintained as indicated above. Therefore, this alternative would not physically divide a community and impacts would be less than significant. Nonetheless, the At-Grade Emphasis LRT Alternative is not the designated Locally Preferred Alternative and will not be studied further. The Fully Underground LRT Alternative has been designated as the Locally Preferred Alternative.

Response to Comment CN1-42

As with the At-Grade Emphasis LRT Alternative, the Underground Emphasis LRT Alternative would not physically divide an established community. As part of the Underground Emphasis LRT Alternative, the Alameda Street underpass would be constructed at 1st Street in the Little Tokyo community, which would carry car and truck through traffic along Alameda Street beneath 1st Street and the rail junction. In addition, an optional overhead pedestrian bridge structure would maintain pedestrian and bicyclist access to the north and south sides of Alameda Street and enhance mobility. The Underground Emphasis LRT Alternative would not create a barrier that would impede vehicle, bicycle, or pedestrian access. Vehicle, bicycle, and pedestrian access at the intersection of 1st and Alameda Streets would be maintained as indicated above. Therefore, this alternative would not physically divide a community and impacts would be less than significant. Nonetheless, the Underground Emphasis LRT Alternative is not the designated Locally Preferred Alternative and will not be studied further. The Fully Underground LRT Alternative has been designated as the Locally Preferred Alternative.

Response to Comment CN1-43

Please refer to Response to Comment CN1-41, above. Under the At-Grade Emphasis LRT Alternative, the automobile underpass under Alameda Street and the pedestrian bridge located where the tracks would cross Alameda Street would enhance community mobility. Therefore, this alternative would not impair community mobility or create a physical barrier to cross Alameda Street and impacts would be less than significant. Nonetheless, the At-Grade Emphasis LRT Alternative is not the designated Locally Preferred Alternative and will not be studied further. The Fully Underground LRT Alternative has been designated as the Locally Preferred Alternative.

Response to Comment CN1-44

Please refer to Response to Comment CN1-42, above. As part of the Underground Emphasis LRT Alternative, the Alameda Street underpass constructed at 1st Street and the pedestrian bridge located where the tracks would cross Alameda Street would enhance community mobility. Therefore, this alternative would not impair community mobility or create a physical barrier to cross Alameda Street and impacts would be less than significant. Nonetheless, the Underground Emphasis LRT Alternative is not the designated Locally Preferred Alternative and will not be studied further. The Fully Underground LRT Alternative has been designated as the Locally Preferred Alternative.

Response to Comment CN1-45

The duration and intensity of construction impacts related to TBM operations were shown in Table 4.18-2 of the Draft EIS/EIR and for the Locally Preferred Alternative in Table 4.18-1 of this Final EIS/EIR. The Locally Preferred Alternative has been modified since publication of the Draft EIS/EIR to relocate the potential TBM insertion site to the Mangrove property in order to reduce impacts. Please refer to Response to Comment CN1-4, above.

Response to Comment CN1-46

Please refer to Response to Comment CN1-7, above.

Response to Comment CN1-47

This mitigation measure has been recorded in Section 4.17.4.2 of this Final EIS/EIR as one of the mitigation measures suggested by the Little Tokyo community. Metro has identified measures in the Mitigation Monitoring and Reporting Program for the Locally Preferred Alternative (Chapter 8) of this Final EIS/EIR that will provide support for the Little Tokyo businesses. This could take the form of in-kind advertising, Metro-sponsored coupons, city-wide advertising that Little Tokyo is open for business during construction, and similar supportive measures.

Response to Comment CN1-48

Please refer to Response to Comment CN1-9, above.

Response to Comment CN1-49

The following mitigation measure has been added to Section 4.17.4.3 of this Final EIS/EIR and the Mitigation Monitoring and Reporting Program for the Locally Preferred Alternative (Chapter 8):

Metro shall provide services to support affected Little Tokyo businesses and organizations during construction such as targeted advertising and marketing campaigns, Metro-sponsored coupons, incentives for construction worker patronage, and Metro-sponsored community events. Metro shall provide free technical support assistance (i.e., website development) to local businesses on strategies for business development that can minimize any adverse impacts of construction. This can include, but not be limited to, assistance with accounting or advertising. Metro shall work with the RCCLC including businesses, tenants, property owners, and government agencies with jurisdiction to make policy to resolve issues arising from adverse business issues during all phases of construction. The committee shall work to develop an implementation plan for these services and determine their content. The committee shall also be kept apprised of construction progress and upcoming transit, parking, or access changes. Metro shall provide maps showing existing and planned access during all phases of construction. Metro shall also provide directional signage to temporary parking facilities. These activities shall be conducted in a manner consistent with the similar program developed for the Crenshaw Transit Corridor Project.

Response to Comment CN1-50

The mitigation measure recommendations were segregated in the Draft EIS/EIR because they are a distinct part of the environmental justice outreach process. Like all other appropriate mitigation measures in the Draft EIS/EIR, feasible measures from the Little Tokyo Working Group recommendations have been incorporated into the Mitigation Monitoring and Reporting Program for the Locally Preferred Alternative (Chapter 8). The Mitigation Monitoring and Reporting Program for the Locally Preferred Alternative, Chapter 8, contains final mitigation measures for the Locally Preferred Alternative; the Mitigation Monitoring and Reporting Program will be approved by the Metro Board of Directors upon certification of this Final EIS/EIR. These mitigation measures will also be included in a Record of Decision subsequently issued by FTA. Metro will formally commit to implement all mitigation measures in the Mitigation Monitoring and Reporting Program for the Locally Preferred Alternative upon certification of this Final EIS/EIR and issuance of the Record of Decision by FTA.

Response to Comment CN1-51

Partially open-roof stations are being considered as an urban design measure where possible. Metro has refined the Locally Preferred Alternative alignment in Little Tokyo primarily to reduce impacts, but this refinement may also have the benefit of reducing project capital costs.

Response to Comment CN1-52

Comment acknowledged.

Response to Comment CN1-53

Comment acknowledged. Table 6-15 of the Draft EIS/EIR showed that the Fully Underground LRT Alternative performs the best compared to the No Build, TSM, and other build alternatives for both new transit trips and project transit trips.

Response to Comment CN1-54

Thank you for your comment. Support for the Fully Underground LRT Alternative is noted. The Metro Board of Directors voted on October 28, 2010 to designate the Fully Underground LRT Alternative as the Locally Preferred Alternative.

Response to Comment CN1-55

Comment acknowledged. As indicated in Chapter 6, Cost and Performance Considerations, of the Draft EIS/EIR and this Final EIS/EIR, the value of unique and diverse communities in the project area and the support of community preservation, which includes balancing the benefits and impacts while preserving communities in the area, such as Little Tokyo, the Arts District, Bunker Hill, Civic Center, and the Historic Core, are already included as goals and objectives for evaluating potential alternatives for the Regional Connector Transit Corridor project.

Response to Comment CN1-56

Comment acknowledged. The Little Tokyo Community Council has been added to the List of Key Stakeholder Groups and Organizations table in Chapter 7, Public and Agency Outreach, of this Final EIS/EIR.

Community Organizations, Neighborhood Groups, and Homeowner Associations:

Downtown Los Angeles Neighborhood Council	Higgins Homeowners Association
Historic Cultural Neighborhood Council	Savoy Homeowners Association
Little Tokyo Community Council	

Response to Comment CN1-57

Comment acknowledged. Chapter 7, Public and Agency Outreach, of this Final EIS/EIR has been modified to clarify that the Little Tokyo Community Council's PCPC is the Planning and Cultural Preservation Committee.

- Little Tokyo Community Council: ~~Parking,~~ Planning, and Cultural Preservation Committee

Email: cishii@jaclpsw.org

Comment:

I speak on behalf of the Japanese American Citizens League - Pacific Southwest District. Our organization, as a fellow Little Tokyo community-based nonprofit organization supports the Fully-Underground Regional Connector option as the **ONLY** acceptable alternative for the Metro Regional Connector. We appreciate the continuous dialogue that MTA has engaged in with Little Tokyo nonprofits, residents and small businesses. 1

The JACL Pacific Southwest District is a member of the Little Tokyo Community Council (LTCC). As an active participant with the LTCC Preservation and Planning Committee as well as the LTCC Transit Committee, we would also like to reiterate the 6 major comments on the Draft EIR/EIS provided by the LTCC: 2

1) The LTCC strongly supports Metro's finding that "the Draft EIS/EIR does designate the Fully Underground LRT Alternative…as a staff recommended Preferred Alternative based on the technical analysis…and input received from the community." We concur that the Fully Underground Alternative "was developed to best address community concerns simultaneous with cost, operational, and design concerns." Further, the analysis the EIS/EIR shows it is clearly the best performing alternative from a ridership, travel time savings, environmental, cost-effectiveness, and social impact perspective. It is also nearly the cheapest alternative to operate and maintain over time. From the Little Tokyo community perspective, it is the only alternative that adequately addresses our concerns about environmental, economic, social, and cultural impacts to the community. The other alternatives pose significant disproportionate impacts on Little Tokyo.

2) The EIS/EIR should correct its assessment of the impacts of the At-Grade Emphasis and Underground Emphasis alternatives. The draft understates the environmental impacts on the Little Tokyo community of the grade separations required along Alameda Street that would physically bisect the Little Tokyo community, potential impacts if tunnel boring were to be initiated from 2nd/Central, and the aesthetic impacts associated with at-grade LRT operations through our community. As such, these two alternatives would place disproportionate burdens on a minority community in the areas of Transit Service Equity Deterioration and Community and Neighborhood Impacts. 3

3) If Metro cannot commit to initiate TBM activities at 2nd/Flower/Hope until Preliminary Engineering is complete, the EIS/EIR should more clearly distinguish the extent and duration of construction impacts that could affect Little Tokyo if boring begins at 2nd/Central. This information is critical to determining whether the community will endure disproportionate impacts during construction activities. 4

4) While many mitigation measures are identified throughout the document, the recommendations from the LTCC are segregated as a package of candidate measures to be considered by Metro and FTA. Please confirm the process for approving mitigation measure recommendations and whether this differs from mitigation measures cited elsewhere in the document. 5

5) The LTCC calls for Metro to formalize an agreement with the Little Tokyo community that provides us with a substantial role in decision-making during the Preliminary Engineering, Final Design, and construction phases that addresses:

- Little Tokyo's formal involvement in the development and approval of mitigation measures for the Little Tokyo community,

- Little Tokyo's formal involvement in the monitoring of mitigation measures through the Mitigation Monitoring Plan,

- How to provide a sufficient safety net for Little Tokyo businesses that will be affected during construction,

- Redevelopment of the Office Depot block 6

6) The Draft EIS/EIR does not reflect the language adopted by the LTCC on May 25, 2010 that included refinements to its comments on the pending environmental analysis. These changes stem from additional comments from the Little Tokyo community in late April and amend comments that were transmitted to Metro in our letter dated April 27, 2010. The approved changes are shown in underline. 7

- Expand the safety net for Little Tokyo businesses that will be affected during construction. This can include having Metro provide additional financial and other resources to the community and/or businesses to provide more targeted marketing, as well as financial compensation to local businesses for any loss in gross sales. The process for establishing eligibility, quantifying financial assistance or compensation, and related details would be established jointly between Metro and Little Tokyo stakeholders. 8

- Metro shall work with the Little Tokyo community businesses to ensure no adverse impacts to business operations prior to relocation of or protection of in-place utilities and during construction activities. The LTCC and Metro shall consider establishing a Business Interruption Committee that will streamline Metro's communication with the community and avoid adverse business interruptions. This committee shall include local businesses and property owners. 9

Responses to Comments from Japanese American Citizens League - Pacific Southwest District, Ishii, Craig

Response to Comment CN2-1

Thank you for your comment. Support for the Fully Underground LRT Alternative is noted. The Metro Board of Directors voted on October 28, 2010 to designate the Fully Underground LRT Alternative as the Locally Preferred Alternative.

Response to Comment CN2-2

Thank you for your comment. Support for the Fully Underground LRT Alternative is noted. Please refer to Responses to Comments CN2-3 through CN2-9, below, for detailed responses to concerns raised by the commenter.

Response to Comment CN2-3

The impacts of the proposed pedestrian bridge and roadway underpass in Little Tokyo were discussed in Sections 4.17.3.3.2 and 4.17.3.4.2 of the Draft EIS/EIR and this Final EIS/EIR, respectively. The potential impacts of beginning tunnel boring machine operations at 2nd and Central were described in Section 4.18.3.4 of the Draft EIS/EIR. Impacts were adequately analyzed in the Draft EIS/EIR. Disproportionate impacts on the Little Tokyo community were analyzed in Section 4.17, Environmental Justice, of the Draft EIS/EIR and this Final EIS/EIR. The Metro Board of Directors voted on October 28, 2010 to designate the Fully Underground LRT Alternative as the Locally Preferred Alternative. The refined Locally Preferred Alternative would not involve construction of any pedestrian bridges or roadway underpasses in Little Tokyo, and would not involve starting tunnel boring machine operations at 2nd and Central. Tunnel boring machine operations would instead begin at the Mangrove property as indicated in Section 4.18, Construction Impacts, of this Final EIS/EIR which is farther from the center of Little Tokyo and would involve fewer impacts.

Response to Comment CN2-4

Please refer to Response to Comment CN1-4, above.

Response to Comment CN2-5

The mitigation measure recommendations were segregated in the Draft EIS/EIR because they are a distinct part of the environmental justice outreach process. Like all other appropriate mitigation measures in the Draft EIS/EIR, feasible measures from the Little Tokyo Working Group recommendations have been incorporated into the Mitigation Monitoring and Reporting Program for the Locally Preferred Alternative (Chapter 8). The Mitigation Monitoring and Reporting Program for the Locally Preferred Alternative, Chapter 8, contains final mitigation measures for the Locally Preferred Alternative; the Mitigation Monitoring and Reporting Program will be approved by the Metro Board of Directors upon certification of this Final EIS/EIR. These mitigation measures will also be included in a Record of Decision subsequently issued by FTA. Metro will formally commit to implement all mitigation measures in the Mitigation Monitoring and Reporting Program for the Locally Preferred Alternative upon certification of this Final EIS/EIR and issuance of the Record of Decision by FTA.

Response to Comment CN2-6

Metro intends to undertake all of the listed activities. The Mitigation Monitoring and Reporting Program for the Locally Preferred Alternative (Chapter 8) of this Final EIS/EIR and Record of Decision to be issued by FTA are the formalized commitments to implement mitigation measures. Metro will involve the community throughout the project process. Based on the refinements to the Locally Preferred Alternative, only the northern portion of the block bounded by 1st Street, Central Avenue, 2nd Street, and Alameda Street would need to be acquired as part of the Locally Preferred Alternative for the 1st/Central Avenue station site. The Señor Fish, Weiland Brewery, associated parking, and the former Café Cuba (The Spice Table) would still need to be displaced. However, the remaining businesses on that block would remain, including the Office Depot and associated parking.

Response to Comment CN2-7

Please refer to Response to Comment CN1-7, above.

Response to Comment CN2-8

This mitigation measure has been recorded in Section 4.17.4.2 of this Final EIS/EIR as one of the mitigation measures suggested by the Little Tokyo community. Metro has identified measures in the Mitigation Monitoring and Reporting Program for the Locally Preferred Alternative (Chapter 8) of this Final EIS/EIR that will provide support for the Little Tokyo businesses. This could take the form of in-kind advertising, Metro-sponsored coupons, city-wide advertising that Little Tokyo is open for business during construction, and similar supportive measures.

Response to Comment CN2-9

As indicated in Section 4.3, Community and Neighborhood Impacts, of the Draft EIS/EIR and this Final EIS/EIR, mitigation to reduce community and neighborhood impacts during construction of the Locally Preferred Alternative involves the development of a community outreach plan to notify local communities of construction schedules, street lane and sidewalk closures, and detours.

In addition, Metro will create a Regional Connector Community Leadership Council, consisting of local business and property owners, to streamline Metro's communication with all communities affected by the project and respond to their concerns during construction of the Locally Preferred Alternative.

RE: Comments on Draft EIS/EIR for Regional Connector

Dear Ms. Roybal-Saltarelli:

I speak as a Board member of the Japanese American Citizens League, Pacific Southwest District. Our organization, as a fellow Little Tokyo community-based nonprofit organization supports the Fully-Underground Regional Connector option as the **ONLY** acceptable alternative for the Metro Regional Connector. We appreciate the continuous dialogue that MTA has engaged in with Little Tokyo nonprofits, residents and small businesses. The positive working relationship and open dialogue have helped the community actively participate in the process to date. 1

The JACL Pacific Southwest District is a member of the Little Tokyo Community Council (LTCC). As an active participant with the LTCC Preservation and Planning Committee as well as the LTCC Transit Committee, we would also like to reiterate the 6 major comments on the Draft EIR/EIS provided by the LTCC: 2

1) The LTCC strongly supports Metro's finding that "the Draft EIS/EIR does designate the Fully Underground LRT Alternative...as a staff recommended Preferred Alternative based on the technical analysis...and input received from the community." We concur that the Fully Underground Alternative "was developed to best address community concerns simultaneous with cost, operational, and design concerns." Further, the analysis the EIS/EIR shows it is clearly the best performing alternative from a ridership, travel time savings, environmental, cost-effectiveness, and social impact perspective. It is also nearly the cheapest alternative to operate and maintain over time. From the Little Tokyo community perspective, it is the only alternative that adequately addresses our concerns about environmental, economic, social, and cultural impacts to the community. The other alternatives pose significant disproportionate impacts on Little Tokyo.

2) The EIS/EIR should correct its assessment of the impacts of the At-Grade Emphasis and Underground Emphasis alternatives. The draft understates the environmental impacts on the Little Tokyo community of the grade separations required along Alameda Street that would physically bisect the Little Tokyo community, potential impacts if tunnel boring were to be initiated from 2nd/Central, and the aesthetic impacts associated with at-grade LRT operations through our community. As such, these two alternatives would place disproportionate burdens on a minority community in the areas of Transit Service Equity Deterioration and Community and Neighborhood Impacts. 3

3) If Metro cannot commit to initiate TBM activities at 2nd/Flower/Hope until Preliminary Engineering is complete, the EIS/EIR should more clearly distinguish the extent and duration of construction impacts that could 4

affect Little Tokyo if boring begins at 2nd/Central. This information is critical to determining whether the community will endure disproportionate impacts during construction activities.

4 cont'd

4) While many mitigation measures are identified throughout the document, the recommendations from the LTCC are segregated as a package of candidate measures to be considered by Metro and FTA. Please confirm the process for approving mitigation measure recommendations and whether this differs from mitigation measures cited elsewhere in the document.

5

5) The LTCC calls for Metro to formalize an agreement with the Little Tokyo community that provides us with a substantial role in decision-making during the Preliminary Engineering, Final Design, and construction phases that addresses:
- Little Tokyo's formal involvement in the development and approval of mitigation measures for the Little Tokyo community,
- Little Tokyo's formal involvement in the monitoring of mitigation measures through the Mitigation Monitoring Plan,
- How to provide a sufficient safety net for Little Tokyo businesses that will be affected during construction,
- Redevelopment of the Office Depot block

6

6) The Draft EIS/EIR does not reflect the language adopted by the LTCC on May 25, 2010 that included refinements to its comments on the pending environmental analysis. These changes stem from additional comments from the Little Tokyo community in late April and amend comments that were transmitted to Metro in our letter dated April 27, 2010. The approved changes are shown in underline.

7

- Expand the safety net for Little Tokyo businesses that will be affected during construction. This can include having Metro provide additional financial and other resources to the community and/or businesses to provide more targeted marketing, as well as financial compensation to local businesses for any loss in gross sales. The process for establishing eligibility, quantifying financial assistance or compensation, and related details would be established jointly between Metro and Little Tokyo stakeholders.

8

- Metro shall work with the Little Tokyo community businesses to ensure no adverse impacts to business operations prior to relocation of or protection of in-place utilities and during construction activities. The LTCC and Metro shall consider establishing a Business Interruption Committee that will streamline Metro's communication with the community and avoid adverse business interruptions. This committee shall include local businesses and property owners.

9

In conclusion, I would like to thank Metro again for their willingness to open the planning process to the community, and strongly hope that such a positive working relationship will continue in the future. Little Tokyo is an important place of history and community for Japanese Americans and everyone else, and ensuring the preservation of Little Tokyo is essential. The Fully Underground alternative is the **only build option** that allows for this, and therefore I urge the MTA Board to select this as the Locally Preferred Alternative.

Thank you for your consideration. We look forward to continuing to work with Metro to address appropriate mitigation measures that will address our community's concerns.

10

Sincerely,

CN3

RE: Comments on Draft EIS/EIR for Regional Connector

Dear Ms. Roybal-Saltarelli:

I speak as the Public Policy Coordinator of the Japanese American Citizens League, Pacific Southwest District. Our organization, as a Little Tokyo community-based organization, supports the Fully-Underground Regional Connector option as the ONLY acceptable alternative for the Metro Regional Connector. We appreciate the continuous dialogue that MTA has engaged in with Little Tokyo nonprofits, residents and small businesses. The positive working relationship and open dialogue have helped the community actively participate in the process to date. 1

The JACL Pacific Southwest District is a member of the Little Tokyo Community Council (LTCC). As an active participant with the LTCC Preservation and Planning Committee as well as the LTCC Transit Committee, we would also like to reiterate the 6 major comments on the Draft EIR/EIS provided by the LTCC:

1) The LTCC strongly supports Metro's finding that "the Draft EIS/EIR does designate the Fully Underground LRT Alternative…as a staff recommended Preferred Alternative based on the technical analysis…and input received from the community." We concur that the Fully Underground Alternative "was developed to best address community concerns simultaneous with cost, operational, and design concerns." Further, the analysis the EIS/EIR shows it is clearly the best performing alternative from a ridership, travel time savings, environmental, cost-effectiveness, and social impact perspective. It is also nearly the cheapest alternative to operate and maintain over time. From the Little Tokyo community perspective, it is the <u>only</u> alternative that adequately addresses our concerns about environmental, economic, social, and cultural impacts to the community. The other alternatives pose significant disproportionate impacts on Little Tokyo. 2

2) The EIS/EIR should correct its assessment of the impacts of the At-Grade Emphasis and Underground Emphasis alternatives. The draft understates the environmental impacts on the Little Tokyo community of the grade separations required along Alameda Street that would physically bisect the Little Tokyo community, potential impacts if tunnel boring were to be initiated from 2nd/Central, and the aesthetic impacts associated with at-grade LRT operations through our community. As such, these two alternatives would place disproportionate burdens on a minority community in the areas of Transit Service Equity Deterioration and Community and Neighborhood Impacts. 3

3) If Metro cannot commit to initiate TBM activities at 2nd/Flower/Hope until Preliminary Engineering is complete, the EIS/EIR should more clearly distinguish the extent and duration of construction impacts that could affect Little Tokyo if boring begins at 2nd/Central. This information is critical to determining whether the community will endure disproportionate impacts during construction activities. [kristin's note: to reiterate and be resolute: we absolutely do not want tunnel boring to begin in Little Tokyo, as we believe it will severely disrupt community and economic life] 4

4) While many mitigation measures are identified throughout the document, the recommendations from the LTCC are segregated as a package of candidate measures to be considered by Metro and FTA. Please confirm the process for approving mitigation measure recommendations and whether this differs from mitigation measures cited elsewhere in the document. 5

5) The LTCC calls for Metro to formalize an agreement with the Little Tokyo community that provides us with a substantial role in decision-making during the Preliminary Engineering, Final Design, and construction phases that addresses:
- Little Tokyo's formal involvement in the development and approval of mitigation measures for the Little Tokyo community,
- Little Tokyo's formal involvement in the monitoring of mitigation measures through the Mitigation Monitoring Plan,
- How to provide a sufficient safety net for Little Tokyo businesses that will be affected during construction,
- Redevelopment of the Office Depot block

6

6) The Draft EIS/EIR does not reflect the language adopted by the LTCC on May 25, 2010 that included refinements to its comments on the pending environmental analysis. These changes stem from additional comments from the Little Tokyo community in late April and amend comments that were transmitted to Metro in our letter dated April 27, 2010. The approved changes are shown in underline.

7

- Expand the safety net for Little Tokyo businesses that will be affected during construction. This can include having Metro provide additional financial and other resources to the community and/or businesses to provide more targeted marketing, as well as financial compensation to local businesses for any loss in gross sales. The process for establishing eligibility, quantifying financial assistance or compensation, and related details would be established jointly between Metro and Little Tokyo stakeholders.

8

- Metro shall work with the Little Tokyo community businesses to ensure no adverse impacts to business operations prior to relocation of or protection of in-place utilities and during construction activities. The LTCC and Metro shall consider establishing a Business Interruption Committee that will streamline Metro's communication with the community and avoid adverse business interruptions. This committee shall include local businesses and property owners.

9

In conclusion, I would like to thank Metro again for their willingness to open the planning process to the community, and strongly hope that such a positive working relationship will continue in the future. Little Tokyo is an important place of history and community for Japanese Americans and everyone else, and ensuring the preservation of Little Tokyo is essential. The Fully Underground alternative is the only build option that allows for this, and therefore I urge the MTA Board to select this as the Locally Preferred Alternative. This is, however, an acceptable alternative only by securing proper mitigations. Our biggest concern right now, to reiterate, is proper business mitigations, as well as minimizing impact to Little Tokyo. We also want to be sure that the Little Tokyo community remains an integral part of future conversations on this project, and that our comments and input are given the proper attention.

Thank you for your consideration. We look forward to continuing to work with Metro to address appropriate mitigation measures that will address our community's concerns.

10

Sincerely,

Kristin Fukushima

Response to Comment CN5-1

Thank you for your comment. Support for the Fully Underground LRT Alternative is noted. The Metro Board of Directors voted on October 28, 2010 to designate the Fully Underground LRT Alternative as the Locally Preferred Alternative.

Response to Comment CN5-2

Thank you for your comment. Support for the Fully Underground LRT Alternative is noted. Please refer to Responses to Comments CN5-3 through CN5-10, below, for detailed responses to concerns raised by the commenter.

Response to Comment CN5-3

The impacts of the proposed pedestrian bridge and roadway underpass in Little Tokyo were discussed in Sections 4.17.3.3.2 and 4.17.3.4.2 of the Draft EIS/EIR and this Final EIS/EIR, respectively. The potential impacts of beginning tunnel boring machine operations at 2nd and Central were described in Section 4.18.3.4 of the Draft EIS/EIR. Impacts were adequately analyzed in the Draft EIS/EIR. Disproportionate impacts on the Little Tokyo community were analyzed in Section 4.17, Environmental Justice, of the Draft EIS/EIR and this Final EIS/EIR. The Metro Board of Directors voted on October 28, 2010 to designate the Fully Underground LRT Alternative as the Locally Preferred Alternative. The refined Locally Preferred Alternative would not involve construction of any pedestrian bridges or roadway underpasses in Little Tokyo, and would not involve starting tunnel boring machine operations at 2nd and Central. Tunnel boring machine operations would instead begin at the Mangrove property as indicated in Section 4.18, Construction Impacts, of this Final EIS/EIR which is farther from the center of Little Tokyo and would involve fewer impacts.

Response to Comment CN5-4

Please refer to Response to Comment CN1-4, above.

Response to Comment CN5-5

The mitigation measure recommendations were segregated in the Draft EIS/EIR because they are a distinct part of the environmental justice outreach process. Like all other appropriate mitigation measures in the Draft EIS/EIR, feasible measures from the Little Tokyo Working Group recommendations have been incorporated into the Mitigation Monitoring and Reporting Program for the Locally Preferred Alternative (Chapter 8). The Mitigation Monitoring and Reporting Program for the Locally Preferred Alternative, Chapter 8, contains final mitigation measures for the Locally Preferred Alternative; the Mitigation Monitoring and Reporting Program will be approved by the Metro Board of Directors upon certification of this Final EIS/EIR. These mitigation measures will also be included in a Record of Decision subsequently issued by FTA. Metro will formally commit to implement all mitigation measures in the Mitigation Monitoring and Reporting Program for the Locally Preferred Alternative upon certification of this Final EIS/EIR and issuance of the Record of Decision by FTA.

Response to Comment CN5-6

Metro intends to undertake all of the listed activities. The Mitigation Monitoring and Reporting Program for the Locally Preferred Alternative (Chapter 8) of this Final EIS/EIR and Record of Decision to be issued by FTA are the formalized commitments to implement mitigation measures. Metro will involve the community throughout the project process. Based on the refinements to the Locally Preferred Alternative, only the northern portion of the block bounded by 1st Street, Central Avenue, 2nd Street, and Alameda Street would need to be acquired as part of the Locally Preferred Alternative for the 1st/Central Avenue station site. The Señor Fish, Weiland Brewery, associated parking, and the former Café Cuba (The Spice Table) would still need to be displaced. However, the remaining businesses on that block would remain, including the Office Depot and associated parking.

Response to Comment CN5-7

Please refer to Response to Comment CN1-7, above.

Response to Comment CN5-8

This mitigation measure has been recorded in Section 4.17.4.2 of this Final EIS/EIR as one of the mitigation measures suggested by the Little Tokyo community. Metro has identified measures in the Mitigation Monitoring and Reporting Program for the Locally Preferred Alternative (Chapter 8) of this Final EIS/EIR that will provide support for the Little Tokyo businesses. This could take the form of in-kind advertising, Metro-sponsored coupons, city-wide advertising that Little Tokyo is open for business during construction, and similar supportive measures.

Response to Comment CN5-9

Refer to Response to Comment CN2-9, above.

Response to Comment CN5-10

Thank you for your comment. Metro has met and will continue to meet with the Little Tokyo community groups regarding the Regional Connector Transit Corridor project. Support for the Fully Underground LRT Alternative is noted. The Metro Board of Directors voted on October 28, 2010 to designate the Fully Underground LRT Alternative as the Locally Preferred Alternative.

During preparation of this Final EIS/EIR, Metro held meetings with community groups, which included the Little Tokyo community, and identified municipal leaders to guide them in the decision-making process as it relates to the proposed station locations, alignment options, and anticipated mitigation measures. Input from the community was incorporated into the refinement of the Locally Preferred Alternative and the mitigation measures presented in this Final EIS/EIR.

RE: Comments on Draft EIS/EIR for Regional Connector

Dear Ms. Roybal-Saltarelli:

The Japanese American Cultural & Community Center is an active participant in the Little Tokyo Community Council, and have hosted many of the community meetings regarding the proposed Regional Connector. We take this opportunity to submit our letter of concurrence with the position stated by Little Tokyo Community Council (LTCC) in their letter of October 1, 2010. 1

LTCC comments addressed the following:

1. The LTCC strongly believes that the Fully Underground alternative is the only acceptable option as the Locally Preferred Alternative that addresses its concerns about the environmental, economic, social, and cultural impacts to the community. As such, it supports Metro's finding that "the Draft EIS/EIR does designate the Fully Underground LRT Alternative...as a staff recommended Preferred Alternative based on the technical analysis...and input received from the community." Please note that our support for the Fully Underground alternative is contingent on satisfactory acceptance of LTCC's proposed mitigation measures identified on April 27, 2010. The other alternatives pose significant, disproportionate impacts on Little Tokyo that are unacceptable. 2

2. The EIS/EIR should correct its assessment of the impacts of the At-Grade Emphasis and Underground Emphasis alternatives. The draft understates the environmental impacts on the Little Tokyo community of the grade separations required along Alameda Street that would physically bisect the Little Tokyo community, potential impacts if tunnel boring were to be initiated from 2nd/Central, and the aesthetic impacts associated with at-grade LRT operations through our community. 3

3. In its letter to Metro dated April 27, 2010, the LTCC strongly urged Metro to initiate tunnel boring activities from 2nd/Flower/Hope to minimize construction impacts on the Little Tokyo community. This information is critical to determining whether the community will endure disproportionate impacts during construction activities. 4

4. While many mitigation measures are identified throughout the document, the recommendations from the LTCC are segregated as a package of candidate measures to be considered by Metro and FTA. Please confirm the process for approving mitigation measure recommendations and whether this differs from mitigation measures cited elsewhere in the document. 5

5. The LTCC calls for Metro to formalize an agreement with the Little Tokyo community that provides us with a substantial role in decision-making during the Preliminary Engineering, Final Design, and construction phases that addresses: 6

    a. Little Tokyo's formal involvement in the development and approval of mitigation measures for the Little Tokyo community,
    b. Little Tokyo's formal involvement in the monitoring of mitigation measures through the Mitigation Monitoring Plan,
    c. How to provide a sufficient safety net for Little Tokyo businesses that will be affected during construction,
    d. Redevelopment of the Office Depot block.

6. The Draft EIS/EIR does not reflect the language adopted by the LTCC on May 25, 2010 that included refinements to its comments on the pending environmental analysis. These changes stem from additional comments from the Little Tokyo community in late April and amend comments that were transmitted to Metro in our letter dated April 27, 2010: 7

    a. Expand the safety net for Little Tokyo businesses that will be affected during construction. This must include having Metro provide additional financial and other resources to the community and/or businesses to provide more targeted marketing, as well as financial compensation to local businesses for any loss in gross sales. The process for establishing eligibility, quantifying financial assistance or compensation, and related details would be established jointly between Metro and Little Tokyo stakeholders. 8
    b. Metro shall work with the Little Tokyo community businesses to ensure no adverse impacts to business operations prior to relocation of or protection of in-place utilities and during construction activities. 9

Thank you for your consideration. We look forward to continuing to work with Metro to address appropriate mitigation measures that will address our community's concerns. 10

Sincerely,

Chris Aihara
Executive Director
Japanese American Cultural & Community Center

CN6

Responses to Comments from Japanese American Cultural and Community Center, Aihara, Chris

Response to Comment CN6-1

Comment acknowledged.

Response to Comment CN6-2

Support for the Fully Underground LRT Alternative and the Little Tokyo Community Council proposed mitigation measures is noted. The Metro Board of Directors voted on October 28, 2010 to designate the Fully Underground LRT Alternative as the Locally Preferred Alternative.

Response to Comment CN6-3

The impacts of the proposed pedestrian bridge and roadway underpass in Little Tokyo were discussed in Sections 4.17.3.3.2 and 4.17.3.4.2 of the Draft EIS/EIR and this Final EIS/EIR, respectively. The potential impacts of beginning tunnel boring machine operations at 2nd and Central were described in Section 4.18.3.4 of the Draft EIS/EIR. Impacts were adequately analyzed in the Draft EIS/EIR. Disproportionate impacts on the Little Tokyo community were analyzed in Section 4.17, Environmental Justice, of the Draft EIS/EIR and this Final EIS/EIR. The Metro Board of Directors voted on October 28, 2010 to designate the Fully Underground LRT Alternative as the Locally Preferred Alternative. The refined Locally Preferred Alternative would not involve construction of any pedestrian bridges or roadway underpasses in Little Tokyo, and would not involve starting tunnel boring machine operations at 2nd and Central. Tunnel boring machine operations would instead begin at the Mangrove property as indicated in Section 4.18, Construction Impacts, of this Final EIS/EIR which is farther from the center of Little Tokyo and would involve fewer impacts.

Response to Comment CN6-4

Please refer to Response to Comment CN1-4, above.

Response to Comment CN6-5

The mitigation measure recommendations were segregated in the Draft EIS/EIR because they are a distinct part of the environmental justice outreach process. Like all other appropriate mitigation measures in the Draft EIS/EIR, feasible measures from the Little Tokyo Working Group recommendations have been incorporated into the Mitigation Monitoring and Reporting Program for the Locally Preferred Alternative (Chapter 8). The Mitigation Monitoring and Reporting Program for the Locally Preferred Alternative, Chapter 8, contains final mitigation measures for the Locally Preferred Alternative; the Mitigation Monitoring and Reporting Program will be approved by the Metro Board of Directors upon certification of this Final EIS/EIR. These mitigation measures will also be included in a Record of Decision subsequently issued by FTA. Metro will formally commit to implement all mitigation measures in the Mitigation Monitoring and Reporting Program for the Locally Preferred Alternative upon certification of this Final EIS/EIR and issuance of the Record of Decision by FTA.

Response to Comment CN6-6

Metro intends to undertake all of the listed activities. The Mitigation Monitoring and Reporting Program for the Locally Preferred Alternative (Chapter 8) of this Final EIS/EIR and Record of Decision to be issued by FTA are the formalized commitments to implement mitigation measures. Metro will involve the community throughout the project process. Based on the refinements to the Locally Preferred Alternative, only the northern portion of the block bounded by 1st Street, Central Avenue, 2nd Street, and Alameda Street would need to be acquired as part of the Locally Preferred Alternative for the 1st/Central Avenue station site. The Señor Fish, Weiland Brewery, associated parking, and the former Café Cuba (The Spice Table) would still need to be displaced. However, the remaining businesses on that block would remain, including the Office Depot and associated parking.

Response to Comment CN6-7

Please refer to Response to Comment CN1-7, above.

Response to Comment CN6-8

This mitigation measure has been recorded in Section 4.17.4.2 of this Final EIS/EIR as one of the mitigation measures suggested by the Little Tokyo community. Metro has identified measures in the Mitigation Monitoring and Reporting Program for the Locally Preferred Alternative (Chapter 8) of this Final EIS/EIR that will provide support for the Little Tokyo businesses. This could take the form of in-kind advertising, Metro-sponsored coupons, city-wide advertising that Little Tokyo is open for business during construction, and similar supportive measures.

Response to Comment CN6-9

Please refer to Response to Comment CN2-9, above.

Response to Comment CN6-10

Thank you for your comment. Metro has met and will continue to meet with the Little Tokyo community groups regarding the Regional Connector Transit Corridor project. During preparation of this Final EIS/EIR, Metro held meetings with community groups, which included the Little Tokyo community, and identified municipal leaders to guide them in the decision-making process as it relates to the proposed station locations, alignment options, and anticipated mitigation measures. Input from the community was incorporated into the refinement of the Locally Preferred Alternative and the mitigation measures presented in this Final EIS/EIR.

Re: Metro Regional Connector EIS/EIR

The Little Tokyo Service Center (LTSC) is a comprehensive multi-purpose social service agency serving thousands of clients annually in Little Tokyo for the past 30 years.

The LTSC Board of Directors, at the Board meeting on Tuesday, October 12, 2010, voted unanimously to support the FULLY UNDERGROUND OPTION of the Metro Connector Project, with the provisions that there would be: a) ongoing communication with and participation by the Little Tokyo community in the development of the Connector, b) mitigation and business compensation measures for businesses negatively impacted by the Connector construction, and c) boring of the underground tunnel along Second Street be done from west to east. 1 2 3

LTSC is appreciative of the work done thus far by the Metro staff in assisting the community to be informed and engaged, and hopes to continue in a constructive dialogue as we move ahead. 4

Sincerely,

Bill Watanabe
Executive Director

RE: Comments on Draft EIS/EIR for Metro Regional Connector

Dear Ms. Roybal Saltarelli:

The Asian Pacific Islander Small Business Program is a non-profit collaborative whose mission is to assist entrepreneurs in low-income immigrant Asian Pacific Islander communities. Our offices are located in Little Tokyo and as a result we are very interested in Metro's plans for the Regional Connector Transit Corridor. As an elected Little Tokyo representative of the Historic Cultural Neighborhood Council, and as an appointed member of the Community Redevelopment Agency of the City of Los Angeles' Little Tokyo Community Advisory Committee, I have closely followed the planning for this important project. I wish to reiterate the comments submitted by the Little Tokyo Community Council (LTCC): I strongly believe that the Fully Underground LRT Alternative is the only acceptable option as the Locally Preferred Alternative. 1

As an advocate of entrepreneurs and small businesses I want to emphasize to Metro the need to provide compensation to businesses that are negatively impacted by the project. Metro must work with Little Tokyo organizations such as the Japanese Chamber of Commerce of Southern California, the Little Tokyo Business Association and the Little Tokyo Business Improvement District to ensure that the concerns of Little Tokyo businesses met. The provision of financial compensation and targeted marketing efforts are essential to providing a safety net for Little Tokyo businesses. In particular, Metro should provide free technical assistance to small businesses to help minimize the adverse impacts of the project. This could include, but not be limited to, assistance with marketing, accounting, finance and access to Metro or other public sources of small business support. 2

My final comment concerns the use of Tunnel Boring Machines. We strongly recommend that the insertion point for TBM be at the west end of 2nd Street, furthest from Little Tokyo. 3

Thank you for your consideration. We look forward to continuing to work with Metro to address appropriate mitigation measures that will address our community's concerns. 4

Sincerely,

Response to Comment CN9-1

Thank you for your comment. Support for the Fully Underground LRT Alternative is noted. The Metro Board of Directors voted on October 28, 2010 to designate the Fully Underground LRT Alternative as the Locally Preferred Alternative. Please refer to Responses to Comments CN9-2 through CN9-4, below, for detailed responses regarding concerns raised by the commenter.

Response to Comment CN9-2

Metro intends to work with the Little Tokyo community to support businesses throughout the construction phase of the project. It is Metro's goal to minimize the Regional Connector's adverse impacts to businesses. Targeted marketing efforts and other technical assistance are included as confirmed mitigation measures in the Mitigation Monitoring and Reporting Program for the Locally Preferred Alternative (Chapter 8) of this Final EIS/EIR. Metro believes that, once completed, the Regional Connector will be beneficial for the Little Tokyo business community.

Response to Comment CN9-3

Please refer to Response to Comment CN1-4, above.

Response to Comment CN9-4

Thank you for your comment. Metro has met and will continue to meet with the Little Tokyo community groups regarding the Regional Connector Transit Corridor project. During preparation of this Final EIS/EIR, Metro held meetings with community groups, which included the Little Tokyo community, and identified municipal leaders to guide them in the decision-making process as it relates to the proposed station locations, alignment options, and anticipated mitigation measures. Input from the community was incorporated into the refinement of the Locally Preferred Alternative and the mitigation measures presented in this Final EIS/EIR.

Mark Ridley-Thomas, Los Angeles County Supervisor, 2nd District
MTA Board of Directors

We, the residents of Savoy in Little Tokyo, represented by the Savoy Homeowners' Association, hereby oppose the MTA Regional Connector underground alignment crossing 1st and Alameda St. As a community of 500+ property owners and residents in 303 units facing this intersection, we stand to lose much because of this project: depressed property values during construction, permanent loss of businesses, increased traffic, and increased air and noise pollution from construction and trains, respectively. The extreme designs for the surfacing of the train and the intersection threaten our property and quality of life. We have already sustained three years of road closures and construction for the Gold Line Extension. We applaud the conventional and unobtrusive design of the Gold line route and welcome the addition of a new Metro station to our neighborhood.

The proposed underground alignment for the Regional Connector, on the other hand, would surround the building in yet another round of heavy construction and place trains running on TWO sides of our building, forcing residents to use a bridge just to cross the street. Our residents facing Alameda will see their views of LA street life forever altered by the presence of a hole going into the ground and trains surfacing every 1.30 minutes. Finally, the Regional Connector will create an artificial boundary effectively isolating us from the historic and significant LA community we are so proud to be a part of.

1 cont'd

We understand the need for the Regional Connector, but we simply cannot accept this development in its present form; the impact on our community is too severe. We implore you and the MTA to find another way.

Sincerely,

The Residents of the Savoy

OPPOSITION LETTER

Attention: Antonio R. Villaraigosa, Mayor, City of Los Angeles
Michael D. Antonovich, Los Angele County Supervisor, 5th District
Don Knabe, Los Angeles County Supervisor, 4th District
Zaev Yaroslavsky, Los Angeles County Supervisor, 3rd District
Mark Ridley-Thomas, Los Angeles County Supervisor, 2nd District
Gloria Molina, Los Angeles County Supervisor, 1st District

We, the patrons, businesses and community members of Little Tokyo, hereby list our signatures below to oppose Metro Regional Connector's underground, or light rail project, which will run through our beloved community. The Metro Regional Connector is only a thoroughfare along 2nd Street and emerges onto 1st and Alameda. It offers no stops along the way. This will threaten long time established businesses, forcing closures and loss of jobs, due to 3-5 years of construction; as well as visitors and tourists seeking accessibility elsewhere. Many Japanese senior citizens who reside in Little Tokyo will not be able to cross the street safely. The Metro line will delineate resident's from their current lifestyle, which will segregate them from everyday shopping, community centers and temples/churches of worship. 2nd Street is very narrow and should not be allowed for Metro's proposed commuter transportation.

We ask that you and your constituents reconsider this project and find other routes that will not destroy our community.

We hereby oppose this project as presented below:

Responses to Comments from the Savoy Homeowners Association

Response to Comment CN10-1

This letter and the signature pages are included herein as part of this Final EIS/EIR. This Final EIS/EIR also includes refinements to the Locally Preferred Alternative presented in the Draft EIS/EIR that reduce construction impacts both in Little Tokyo and other parts of the project area (see Chapter 2). The Locally Preferred Alternative involves reconstruction of a portion of the Metro Gold Line underground, including the tracks at the 1st and Alameda intersection. All trains would run underground or in an open-cut portal in the vicinity of the Savoy complex. This would reduce train activity on the surface in front of the building. The rail infrastructure and trains would be less visibly noticeable than the current at-grade Metro Gold Line. No pedestrian bridges in Little Tokyo are proposed as part of the Locally Preferred Alternative. Metro will continue to work with the community throughout project construction. Metro believes that the mitigation measures presented in the Mitigation Monitoring and Reporting Program for the Locally Preferred Alternative (Chapter 8) of this Final EIS/EIR would minimize project impacts to the extent feasible, including business loss, traffic congestion, air pollution, and noise. It should also be noted that light rail trains are powered by electricity, and do not generate air pollution in the vicinity of the vehicles.

Japanese American National Museum

October 15, 2010

Ms. Dolores Roybal-Saltarelli
Project Manager
Los Angeles County Metropolitan Transportation Authority
One Gateway Plaza, MS 99-22-2
Los Angeles, CA 90012

Dear Ms. Roybal-Saltarelli:

The Japanese American National Museum is appreciative for the opportunity to provide its position on Metro's proposed Regional Connector and, more specifically, on the Draft Environmental Impact Study and Environmental Impact Report (Draft EIS/EIR) for the Regional Connector Transit Corridor Study which was first released on September 3, 2010.

Given the magnitude of the proposed project and the direct impact on the Japanese American National Museum's facilities (located at the corner of Alameda and First Street) and operations, the Board of Trustees wants to convey the following to Metro:

1) Of the proposed build options listed in the Draft EIS/EIR, the Japanese American National Museum believes the Fully Underground Alternative is the best choice in terms of long-term economic, social, environmental, and public benefit to the local and greater community. By constructing the Regional Connector entirely underground, Metro would mitigate potential problems of great concern to the National Museum, such as safety, noise and traffic. The commitment to construct a Little Tokyo station is of primary importance. Given the potential disruption to Little Tokyo during a construction period that could span four years or more, it would be unjust if the community does not receive a commensurate benefit when the project is completed. The National Museum deems the Little Tokyo station as an essential part of the proposed project.

2) The two other build options, the At-Grade Emphasis and the Underground Emphasis, are both problematical for the National Museum. Because the light rail lines would run at-grade, traffic will continuously be disrupted, creating hazards for pedestrians trying to visit our facilities and producing an unhealthy environment filled with noise pollution. One scenario has as

1

2

3

many as 24 trains an hour running adjacent to the Museum's Pavilion and the Museum's tenant, Chado Tea Room. The two other build proposals would require the excavation of Alameda Street, adjacent to the Museum's Pavilion and Chado Tea Room. Such a development would inhibit access to the Museum's underground garage, loading dock, and bus loading zones on First Street and Alameda, jeopardizing thousands of student visits as well as normal operations for the institution.

3 cont'd

3) The National Museum, while expressing its preference for the Fully Underground Alternative, has grave concerns on how the project and its lengthy construction period will affect the stability of the institution. There are three major areas in which the National Museum will be severely impacted by the construction of the Regional Connector:

   a. access to the Museum;
   b. facilities/operations; and
   c. business revenue.

   Mitigation for each area is essential to ensure that the Museum may continue day-to-day operations without suffering an increased burden on its finances and human resources and to compensate for any lost revenue due to construction circumstances that prevent the Museum from doing business with visitors and event rental clients. The National Museum is concerned about its members and visitors not being able to visit its facilities. The perception alone that access is difficult is enough to decrease the institution's attendance. For facilities, increased wear-and-tear on its HVAC (Heating, Ventilation & Air Conditioning) equipment, specifically in regard to air filtration systems, ventilation shafts and rooftop condenser coils due to dust and debris from construction are enormous expenses. Also of major concern is the likelihood of utility service disruptions, including electrical power, natural gas, plumbing and telecom. The construction will likely inhibit the Museum's ability to host visitors and event rental clients, of which the Museum depends for operating revenue. Construction noise and lack of accessibility will greatly reduce the appeal and logistical ability for the Museum to rent event space for meetings, lectures, seminars and receptions. Renting location space for events and media productions constitute an important stream of earned income for the Museum. Noise and accessibility challenges will certainly make the location undesirable and the Museum would lose that revenue source.

4

4) The Japanese American National Museum seeks assurances from Metro that it will be responsive to these concerns and will engage in direct discussions throughout the process and duration of construction. Given

5

the length of the project, direct communication with Metro leadership and staff will be crucial to facilitating resolution of any challenges. The National Museum is gratified by the amount of cooperation shown by Metro since the proposed Regional Connector project was made public and believes that continued cooperation with the willingness to seek new, innovative solutions will be the key to making the project successful for all involved.

5 cont'd

The Japanese American National Museum looks forward to working with Metro to find ways to handle the challenges that lie ahead.

Thank you for your consideration.

Sincerely,

Akemi Kikumura Yano
President & CEO

Gordon Yamate
Chairman of the Board of Trustees

CN11

Responses to Comments from Japanese American National Museum, Yano, Akemi Kikumura

Response to Comment CN11-1

Thank you for your comment. Support for the Fully Underground LRT Alternative is noted. The Metro Board of Directors voted on October 28, 2010 to designate the Fully Underground LRT Alternative as the Locally Preferred Alternative.

Response to Comment CN11-2

The Metro Board of Directors voted on October 28, 2010 to designate the Fully Underground LRT Alternative as the Locally Preferred Alternative. This alternative includes a new underground station on the block bounded by 1st Street, Central Avenue, 2nd Street, and Alameda Street.

Response to Comment CN11-3

Comment noted. Metro will ensure that access to the museum, including bus loading areas, is maintained during construction. The Locally Preferred Alternative would not involve at-grade train operations at 1st and Alameda Streets like the At-Grade Emphasis LRT Alternative and Underground Emphasis LRT Alternative would have.

Response to Comment CN11-4

Preference for the Fully Underground LRT Alternative is noted. The Metro Board of Directors voted on October 28, 2010 to designate the Fully Underground LRT Alternative as the Locally Preferred Alternative. Metro will provide replacement parking during construction on the Mangrove property to offset displaced parking spaces and help maintain access to the museum and other destinations nearby. Pedestrian and automobile access to the museum will be maintained during operating hours throughout the construction phase of the project, and Metro will ensure that visitors remain able to access the museum. Mitigation measures to assist businesses and organizations, including the Japanese American National Museum, are included in the Mitigation Monitoring and Reporting Program for the Locally Preferred Alternative (Chapter 8) of this Final EIS/EIR. Metro will work to minimize any utility service disruptions, and will notify the community in advance should any brief outages be necessary. Metro will repair any inadvertent damage to private property that occurs as a result of construction, including heating, ventilation, and air conditioning (HVAC) systems. Metro will work to establish construction schedules around important community events at the museum so as to accommodate the museum's need to utilize its outdoor spaces. Barriers will be placed around construction staging areas to minimize the visual and noise impacts of construction activities.

Response to Comment CN11-5

Metro intends to engage in direct discussions with the museum throughout the construction phase and will be responsive to the museum's concerns. Metro agrees that direct communication will be crucial to resolving challenges. Metro looks forward to the continued involvement of the museum.

Go For Broke
NATIONAL EDUCATION CENTER

October 15, 2010

Ms. Dolores Roybal-Saltarelli

Via email: regionalconnector@metro.net

RE: Comments on Draft EIS/EIR for Regional Connector

Dear Ms. Roybal-Saltarelli:

Go For Broke National Education Center (GFBNEC) is a 501(c)(3) established by second-generation Japanese American or Nisei veterans of World War II. Our founders and supporters were soldiers of the 100th Infantry Battalion, 442nd Regimental Combat Team and Military Intelligence Service, the heroic units recently designated by Congress to collectively receive its highest civilian honor, the Congressional Gold Medal. Our programs include:

- Hanashi Oral Histories, an archive of more than 1,000 interviews that we've conducted with Nisei or second-generation Japanese American veterans that is the largest of its kind in the nation, and
- an educational curriculum for history and social studies classes that we support with teacher training nationwide and that is offered to students in California, Hawaii, Maryland, Washington, D.C. and Virginia.

In addition, we serve as a resource center for academics, journalists, historians, documentary and film producers, journalists, writers and others. Our symbol is the **Go For Broke Monument**, a lasting reminder of the U.S. Constitution's guarantees of civil liberties to Americans of all races and ethnic backgrounds that stands in Little Tokyo off of Temple Street at Alameda near MOCA's Geffen Contemporary Museum.

GFBNEC has raised millions of dollars, including funding from Congress and the State of California, for the development and planning of a new Go For Broke National Education Center to be built adjacent to the Go For Broke Monument.

On behalf of the veterans, our GFBNEC Board of Directors and our Board of Governors, we join fellow members of the Little Tokyo Community Council (LTCC) in urging the Metropolitan Transit Authority to adopt the Fully Underground Alternative as the only acceptable build option, with the caveat that critical mitigation measures be part of the plan. This option is the Locally Preferred Alternative. It addresses more of our

Go For Broke
NATIONAL EDUCATION CENTER

concerns about environmental, economic, social and cultural impacts on our existing Go For Broke Monument, our future National Education Center and the Little Tokyo community than any of the other alternatives examined by the DEIS/EIR, with the exceptions of the no-build alternatives. We also support Metro's finding that "the Draft EIS/EIR does designate the Fully Underground LRT Alternative...as a staff recommended Preferred Alternative based on the technical analysis...and input received from the community."

1 cont'd

The veterans and GFBNEC agree, as stated in the Draft EIS/EIR, that the Fully Underground Alternative "was developed to best address community concerns simultaneous with cost, operational, and design concerns." The Draft EIS/EIR also shows this option to be the best performing alternative from a ridership, travel time savings, environmental, noise, safety, cost-effectiveness and social impact perspective. Over time, we believe the fully Underground Alternative will also be the most prudent choice fiscally. In contrast, other alternatives, with the exceptions of the no-build alternatives, pose significant, disproportionate impacts on our Go For Broke Monument, our National Education Center, the Little Tokyo community and, ultimately, the City of Los Angeles.

We also agree with our fellow LTCC members that our support for the Fully Underground Alternative is contingent on satisfactory acceptance of LTCC's proposed mitigation measures identified on April 27, 2010. The other alternatives, with the exceptions of the no-build alternatives, pose significant disproportionate impacts on our Go For Broke Monument, our National Education Center and Little Tokyo that are unacceptable. Little Tokyo is one of three remaining Japan Towns in America and is a vibrant part of the Downtown Los Angeles renaissance.

2

We also agree with LTCC that the Draft EIS/EIR is incorrect in its assessment of the impacts of the At-Grade Emphasis and Underground Emphasis alternatives. The draft understates the environmental impacts on the Little Tokyo community of the grade separations required along Alameda Street that would physically bisect the Little Tokyo community, potential impacts if tunnel boring were to be initiated from 2nd/Central, and the aesthetic impacts associated with at-grade LRT operations through our community. As such, these two alternatives would place disproportionate burdens on a minority community in the areas of Transit Service Equity Deterioration and Community and Neighborhood Impacts.

3

HEADQUARTERS
370 Amapola Ave. Ste 110
Torrance, CA 90501
ph: 310-328-0907

ph/fax: 808-585-8484

www.GoForBroke.org

Established in 1988 as the 100th/442nd/MIS WWII Memorial Foundation

Go For Broke
NATIONAL EDUCATION CENTER

The At-Grade Emphasis is especially objectionable to GFBNEC. Running at street level on Temple Street to Alameda, tracks and right-of-way would take up most of the parking lot area north of the Geffen at the corner of Temple and Alameda Streets. The inward curve of the two sets of tracks would be very close to the Go For Broke Monument and would significantly encroach into our GFBNEC building site. In addition, if the LA City Department of Transportation requires more right-of-way for safety reasons as we've been told that it may do, the At-Grade Emphasis would take away most of our building site. This street-level option would have detrimental effects on GFBNEC's plans and on work now underway. Frequent trains would make it impossible to hold veterans' celebrations at the Go For Broke Monument or to use the long-awaited Art Park for special events. It would also make it unlikely that buses filled with school children or 80 and 90-year-old veterans would be able to enter or exit from our new Go For Broke National Education Center on Temple Street. 4

GFBNEC further agrees with LTCC that it is critical for Metro to establish a broader safety net for Little Tokyo businesses and institutions, and that boring must begin at the vacant parcel on 2nd Street between Flower and Hope Streets to minimize impacts of construction on daily life in our Little Tokyo community and on access to our community. 5

And we agree that it is important for Metro to formalize a process for the Little Tokyo Community to have a continuing voice regarding these issues throughout design, engineering and construction of the Regional Connector. 6

On behalf of the veterans, GFBNEC Board of Directors and GFBNEC Board of Governors, thank you for your consideration. We look forward to continuing to work with Metro to move forward with this project and develop effective mitigation measures that will address our own and our community's concerns. 7

Sincerely,

Michael Ozawa
Chairman of the Board
GFBNEC

CN12

Responses to Comments from Go For Broke National Education Center, Ozawa, Michael

Response to Comment CN12-1

Thank you for your comment. Support for the Fully Underground LRT Alternative is noted. The Metro Board of Directors voted on October 28, 2010 to designate the Fully Underground LRT Alternative as the Locally Preferred Alternative. Appropriate candidate mitigation measures identified in the Draft EIS/EIR for the Fully Underground LRT Alternative have been refined and confirmed in the Mitigation Monitoring and Reporting Program for the Locally Preferred Alternative (Chapter 8) of this Final EIS/EIR.

Response to Comment CN12-2

Comment acknowledged.

Response to Comment CN12-3

The impacts of the proposed pedestrian bridge and roadway underpass in Little Tokyo were discussed in Sections 4.17.3.3.2 and 4.17.3.4.2 of the Draft EIS/EIR and this Final EIS/EIR, respectively. The potential impacts of beginning tunnel boring machine operations at 2nd and Central were described in Section 4.18.3.4 of the Draft EIS/EIR. Impacts were adequately analyzed in the Draft EIS/EIR. Disproportionate impacts on the Little Tokyo community were analyzed in Section 4.17, Environmental Justice, of the Draft EIS/EIR and this Final EIS/EIR. The Metro Board of Directors voted on October 28, 2010 to designate the Fully Underground LRT Alternative as the Locally Preferred Alternative. The refined Locally Preferred Alternative would not involve construction of any pedestrian bridges or roadway underpasses in Little Tokyo, and would not involve starting tunnel boring machine operations at 2nd and Central. Tunnel boring machine operations would instead begin at the Mangrove property as indicated in Section 4.18, Construction Impacts, of this Final EIS/EIR which is farther from the center of Little Tokyo and would involve fewer impacts.

Response to Comment CN12-4

Metro recognized the proximity of the proposed At-Grade Emphasis LRT Alternative alignment to the Go For Broke Monument in Section 4.1.4.3 of the Draft EIS/EIR and this Final EIS/EIR. The alternative's potential traffic access impacts to the Go For Broke Monument were identified in Section 4.17.3.3.1 of the Draft EIS/EIR and this Final EIS/EIR. This alternative is not being pursued for further study. The Metro Board of Directors voted on October 28, 2010 to designate the Fully Underground LRT Alternative as the Locally Preferred Alternative. The Locally Preferred Alternative alignment would not use any part of the lot containing the Go For Broke Monument, and would run along the opposite side of Alameda Street in an underground configuration.

Response to Comment CN12-5

Metro will implement the mitigation measures shown in the Mitigation Monitoring and Reporting Program for the Locally Preferred Alternative (Chapter 8) of this Final EIS/EIR with the goal of minimizing impacts to businesses and institutions affected by the project. As part of the refinements made to the Locally Preferred Alternative in response to public comments on the Draft EIS/EIR, Metro is no longer considering inserting tunnel boring machines from the

2nd/Central Avenue station or the 2nd/Hope Street station sites. Instead, the tunnel boring machine would be inserted from the Mangrove property, which is farther from the center of Little Tokyo. This refinement would reduce impacts to the Little Tokyo community and its businesses. Metro will have at least one project office in the Little Tokyo community, and staff will be available via a 24-hour hotline to ensure the minimization of impacts during construction.

Response to Comment CN12-6

Comment acknowledged. Metro will create a Regional Connector Community Leadership Council a committee, consisting of local business and property owners, to streamline Metro's communication with all communities affected by the project and respond to their concerns during construction of the Locally Preferred Alternative.

Response to Comment CN12-7

Thank you for your comment. Metro has met and will continue to meet with the Little Tokyo community groups regarding the Regional Connector Transit Corridor project. During preparation of this Final EIS/EIR, Metro held meetings with community groups, which included the Little Tokyo community, and identified municipal leaders to guide them in the decision-making process as it relates to the proposed station locations, alignment options, and anticipated mitigation measures. Input from the community was incorporated into the refinement of the Locally Preferred Alternative and the mitigation measures presented in this Final EIS/EIR.

Re: **Comments of East West Players on Draft EIS/EIR for Regional Connector**

Dear Ms. Roybal-Saltarelli:

On behalf of East West Players ("EWP"), I am submitting comments on the Draft EIS/EIR for the proposed Regional Connector.

By way of introduction, EWP is the nation's largest producing organization of Asian American artistic work and the longest-running professional theater of color in the country. EWP performs in a 240-seat theater in a restored, historic building once known as the Union Church of Los Angeles, now the Union Center for the Arts. The Union Center, which also houses EWP's administrative offices, is located at 120 John John Aiso Street near the corner of First and San Pedro Streets in the heart of the historic Little Tokyo District in downtown Los Angeles. The Union Center's parking lot is shared with the Go for Broke Monument, the Geffen Contemporary at MOCA and the Japanese American National Museum.

EWP is a member of the Little Tokyo Community Council ("LTCC") and has participated in the prior discussions that Metro has had with Little Tokyo community stakeholders concerning the proposed Regional Connector. EWP fully supports LTCC's position on this issue and joins in LTCC's comments dated October 1, 2010 on the Draft EIS/EIR. Specifically, EWP strongly urges Metro to adopt the Fully Underground LRT Alternative for the proposed Regional Connector as it is the only

1

option that adequately addresses the environmental, economic, social and cultural impacts to the community.

The balance of this letter addresses a few comments specific to EWP and the potential impact the proposed Regional Connector may have on EWP.

1 cont'd

Through its main stage productions, Actors Conservatory, David Henry Hwang Writers Institute and other programs, EWP is a cultural and economic engine for Little Tokyo and the surrounding downtown area. Surveys confirm that over 70% of our patrons visit local restaurants and shops before and/or after attending EWP performances.

Because most of our patrons arrive at the theater via private cars, EWP's main concerns about the proposed Regional Connector is that automobile traffic in the downtown area not be unduly hindered during the construction phase, that access to the Union Center be maintained at all times and that parking in Little Tokyo be preserved as much as reasonably practicable. EWP understands that LTCC has advocated for Metro to implement construction/traffic mitigation measures in addition to those already contemplated in the Draft EIS/EIR, and we join those recommendations.

2

Moreover, upon the completion of the proposed Regional Connector utilizing the Fully Underground Alternative, EWP's patrons will be able to reach the theater using various light rail lines, thus potentially reducing traffic. Many of EWP's patrons reside in Los Angeles' West Side (West LA, Culver City, Beverly Hills, Santa Monica, etc.), South Bay (Gardena, Torrance) and San Gabriel Valley (Pasadena, Monterey Park, Alhambra). The proposed Regional Connector will fulfill the goal stated in the Executive Summary of connecting the spokes of Metro's expanding rail lines and providing a "one seat ride," via the Blue, Gold and Expo lines, from home to the theater for many of EWP's patrons.

3

Given the importance of EWP to Little Tokyo's cultural and economic life, and the impact that the proposed Regional Connector can have on EWP, we believe it would be appropriate to include a specific reference to EWP in the final EIS/EIR as follows and as reflected in the attached pages:

--In Chapter 4, "Environmental Analysis, Consequences and Mitigation," Section 4.3.2.4.6 Little Tokyo, the following (or similar) sentence should be inserted immediately before the final sentence of the third paragraph: --

4

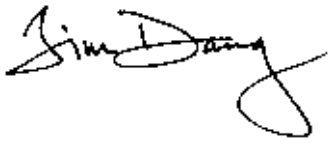
East West Players, the largest and oldest Asian American theater organization in the country, is located across from the Geffen Contemporary and the Go For Broke Monument. 4 cont'd

--In Appendix O, "Community and Neighborhood Impacts," Section 4.9.6 Little Tokyo, on page 21 before the last sentence of the third paragraph, insert the following (or similar) sentence: 5

East West Players, the nation's largest and oldest producing organization of Asian American artistic works, is housed in the historic Union Church Building (now the Union Center for the Arts) located across from the Geffen Contemporary and the Go For Broke Monument.

In conclusion, East West Players thanks Metro for this opportunity to comment on the draft EIS/EIR and reiterates its support for the staff recommended Preferred Alternative of the Fully Underground LRT Alternative for the proposed Regional Connector. Please do not hesitate to contact me if you require any further information. 6

Sincerely,



Tim Dang
Producing Artistic Director

cc: EWP Board of Directors

Core/Center City area and contains a large homeless population and many single-occupant hotel residential properties.

4.3.2.4.6 Little Tokyo

Little Tokyo is a unique cultural community in downtown Los Angeles because it has the largest Japanese-American community in the continental United States (City of Los Angeles Planning Department 2003). Little Tokyo is one of only three remaining Japantowns in the United States (in addition to San Francisco and San Jose). Little Tokyo has a range of mixed uses including retail, hotel, office, and commercial spaces.

The area also contains a substantial portion of the central downtown's residential units and has several new residential developments. The rehabilitation of existing spaces into residential uses is also occurring in Little Tokyo. Important developments in the early planning stages include a 4.5-acre site adjacent to the Little Tokyo/Arts District Station on the Metro Gold Line. Due to the proximity to Metro's transit lines, this development could potentially contain a high-density combination of offices and housing.

Little Tokyo contains a variety of important cultural venues and resources including the JANM, the Jodo Shu Betsuin Temple, the Los Angeles Hompa Hongwanji Temple, and the Japanese-American Cultural and Community Center. The Geffen Contemporary at the MOCA is located behind JANM. The Go For Broke Monument, located North of The Geffen Contemporary at MOCA at Temple and Alameda Streets is a monument dedicated to the Japanese-American veterans of World War II. Little Tokyo also houses the Little Tokyo Service Center that provides affordable housing and community services to residents of the area.

INSERT

The Little Tokyo Historic District was listed on the National Register of Historic Places in 1986. The district spans from the north side of 1st Street from Judge John Aiso Street to Central Avenue and the east side of Judge John Aiso Street from 1st Street to midblock between 1st and Temple Streets. Buildings in the Historic District include commercial buildings on the north side of 1st Street, the Union Church on San Pedro Street, and the former Nishi Hongwanji Temple (the first Buddhist Temple built in Los Angeles) located at 1st and Central Streets.

4.3.2.4.7 Arts District

The Arts District is technically outside central downtown and considered a part of the Central City North Community Plan area; however, it is discussed in this section because it is adjacent to Little Tokyo and could be affected by the project. The Arts District consists mostly of old warehouses that have been converted to artists' lofts and studios (City of Los Angeles Planning Department 2003b). The largest concentration of artists is within the area between 1st, Palmetto, and Alameda Streets, and the Los Angeles River. This area is also sometimes referred to as the Artist-in-Residence District (City of Los Angeles Planning Department 2003b).

4.3.3 Environmental Impacts/Environmental Consequences

The following sections summarize the evaluation of potential community and neighborhood impacts for each alternative. Table 4.3-4 summarizes the results of the analysis.

(City of Los Angeles Planning Department 2003a). To the east, a variety of offices, hotels, shops and government buildings exist along Los Angeles, Spring, and Main Streets. Many buildings here have been renovated and converted to residential uses with ground floor retail, restaurants, and art galleries. Most of the historic financial buildings of the 1920s are found on Spring Street. Several historic theatres are located in this area; however, some are being used for retail purposes or are currently vacant.

The southern end of the Historic Core/City Center is adjacent to the Fashion District and contains historic buildings now used to manufacture clothing. The Metro Red Line travels beneath this district with a station on Hill Street between 4th and 5th Streets (City of Los Angeles Planning Department 2003a). The Skid Row community is located adjacent to the Historic Core/Center City area and contains a large homeless population and many single occupancy hotel residential properties.

4.9.6 Little Tokyo

Little Tokyo is a unique cultural community in downtown Los Angeles with the largest Japanese-American community in the continental United States (City of Los Angeles Planning Department 2003). Los Angeles' Little Tokyo is one of only three remaining Japantowns in the US (in addition to San Francisco and San Jose). Located between 1st, 3rd, San Pedro, and Alameda Streets, Little Tokyo has a range of mixed uses including retail, hotel, office, and commercial spaces.

The area also contains a substantial portion of the central downtown's residential units and has several new residential developments. The rehabilitation of existing spaces into residential uses is also occurring in Little Tokyo. Important developments in the early planning stages include a 4.5-acre site adjacent to the Little Tokyo/Arts District Station on the Metro Gold Line. This development could potentially contain a high-density combination of offices and housing, utilizing its proximity to transit.

Little Tokyo contains a variety of important cultural venues and resources including the Japanese American National Museum (JANM), the Jodo Shu Betsuin Temple, the former Nishi Hongwanji Temple, and the Japanese American Cultural and Community Center. The Geffen Contemporary at the Museum of Contemporary Art (MOCA) is located behind JANM. North of The Geffen Contemporary at MOCA, at Temple and Alameda Streets, is the Go For Broke Monument, a monument dedicated to the Japanese American veterans of World War II who fought for the United States even as their families were classified as "enemy aliens" and were forced into internment camps (Experience L.A. 2009). Little Tokyo also houses the Little Tokyo Service Center that provides affordable housing and community services to the area.

INSERT

The Little Tokyo Historic District was listed on the National Register of Historic Places in 1986. The district spans the north side of 1st Street from Judge John Aiso Street to Central Avenue, and the east side of Judge John Aiso Street from 1st Street to midblock between 1st

Responses to Comments from East West Players, Dang, Tim

Response to Comment CN13-1

Thank you for your comment. Support for the Fully Underground LRT Alternative is noted. The Metro Board of Directors voted on October 28, 2010 to designate the Fully Underground LRT Alternative as the Locally Preferred Alternative. Please refer to Responses to Comments CN13-2 through CN13-6, below, for detailed responses regarding concerns raised by the commenter.

Response to Comment CN13-2

As indicated in Chapter 3, Transportation Impacts and Mitigation, and Section 4.18, Construction Impacts, of the Draft EIS/EIR and this Final EIS/EIR, during construction of the Locally Preferred Alternative significant traffic impacts would occur due to temporary lane closures and installation of decking above proposed stations. Mitigation has been incorporated to reduce traffic impacts associated with construction of the Locally Preferred Alternative to the maximum extent feasible. Nonetheless, traffic impacts associated with construction of the Locally Preferred Alternative would be significant and unavoidable. However, access to Union Station would be maintained.

On-street and off-street parking impacts were discussed in Chapter 3, Transportation Impacts and Mitigation, and Section 4.2, Displacement and Relocation, of the Draft EIS/EIR and this Final EIS/EIR, respectively. Appropriate candidate mitigation measures to reduce parking impacts associated with the Locally Preferred Alternative were identified in the Draft EIS/EIR and confirmed in the Mitigation Monitoring and Reporting Program for the Locally Preferred Alternative (Chapter 8) of this Final EIS/EIR. Examples of parking mitigation include development of a parking mitigation and circulation plan by the contractor in coordination with Metro and the City of Los Angeles; possible sequencing of construction activities so that multiple blocks of on-street parking are not temporarily removed at one time; and any unmet demand for parking spaces eliminated from the northern portion of the block bounded by 1st Street, Central Avenue, 2nd Street, and Alameda Street shall be replaced with spaces within one block of the land uses that rely on those spaces, or through a combination of strategies identified in the Mitigation Monitoring and Reporting Program for the Locally Preferred Alternative.

Response to Comment CN13-3

Comment acknowledged. Support for the Fully Underground LRT Alternative is noted. The Metro Board of Directors voted on October 28, 2010 to designate the Fully Underground LRT Alternative as the Locally Preferred Alternative.

Response to Comment CN13-4

Comment acknowledged. The following sentence has been added to Section 4.3.2.4.6 of this Final EIS/EIR:

The Go For Broke Monument, located ~~North~~ north of The Geffen Contemporary at MOCA at Temple and Alameda Streets is a monument dedicated to the Japanese-American veterans of World War II. East West Players, the largest and oldest Asian American theater organization in the country, is located across from The Geffen Contemporary and the Go For Broke Monument,

in the Union Church Building (now the Union Center for the Arts). Little Tokyo also houses the Little Tokyo Service Center that provides affordable housing and community services to residents of the area.

Response to Comment CN13-5

Comment acknowledged. The following sentence has been added to Section 4.3.2.4.6 of this Final EIS/EIR instead of Appendix O, Community and Neighborhood Impacts Technical Memorandum:

East West Players, the largest and oldest Asian American theater organization in the country, is located across from The Geffen Contemporary and the Go For Broke Monument, in the Union Church Building (now the Union Center for the Arts). Little Tokyo also houses the Little Tokyo Service Center that provides affordable housing and community services to residents of the area.

Response to Comment CN13-6

Thank you for your comment. Support for the Fully Underground LRT Alternative is noted. The Metro Board of Directors voted on October 28, 2010 to designate the Fully Underground LRT Alternative as the Locally Preferred Alternative.

Re: Regional Connector Transit Corridor Project Draft EIR

Dear Ms. Saltarelli:

On behalf of the Los Angeles Conservancy, thank you for the opportunity to comment on Metro's Regional Connector Transit Corridor Project Draft EIR (DEIR). The Los Angeles Conservancy is the largest local historic preservation organization in the United States, with over 6,000 members throughout the Los Angeles area. Established in 1978, the Conservancy works to preserve and revitalize the significant architectural heritage of Los Angeles County. We commend Metro for its thorough survey of historic resources within the Area of Potential Effect, and believe the Regional Connector is an important project for the continued vitality of downtown. We submit the following comments to ensure that adverse impacts to historic and cultural resources are minimized as Metro selects its locally preferred alternative and as the project advances through completion. 1

I. At-Grade Emphasis LRT Alternative

In the analysis of the three build alternatives, At-Grade Emphasis, Underground Emphasis, and Fully Underground, the DEIR identifies a direct adverse impact on a historic resource with the At-Grade Emphasis alternative. As proposed, the train tracks for this alternative would "punch" through the south wall of the National Register-eligible 2nd Street Tunnel before continuing east through the tunnel toward Hill Street.

Completed in 1924, the 2nd Street Tunnel was the fourth in a sequence of significant tunnels built by the City of Los Angeles to ease traffic congestion in the early 20th century. With the demolition of the Broadway and Hill tunnels, and the subsequent alteration of 3rd Street Tunnel in the 1960s, 2nd Street is the only remaining tunnel in this group that retains its original appearance. With a brick-arch construction method and a rusticated, Classical Revival-style portal at the eastern (Hill Street) end, the most notable feature of the tunnel is its sleek, white-tiled line interior that is instantaneously recognizable in countless films and automobile commercials. 2

While the majority of the 2nd Street Tunnel would remain, we concur with the DEIR finding that punching through the tunnel's tile-lined wall would constitute an adverse effect under the federal Section 106 regulations as well as under the California Environmental Quality Act (CEQA). Although the HABS/HAER documentation is a fairly common mitigation measure adopted under Section 106 review, CEQA sets the bar higher by requiring the lead agency to evaluate and adopt all feasible alternatives and mitigation measures that avoid or reduce impacts on historic resources. As feasible alternatives exist that avoid impacts to the 2nd Street Tunnel in the form of the Underground Emphasis and Fully Underground alternatives, the Conservancy urges Metro not to adopt the At-Grade Emphasis as the locally preferred alternative. 2 cont'd

II. Underground Emphasis and Fully Underground LRT Alternatives

Under all options for the Underground Emphasis and Fully Underground alternatives, the block bounded by 1st Street, Alameda, 2nd Street, and Central Avenue would be taken and all buildings demolished, including the California Register-eligible building at 416 East 1st Street. Located at the southwest corner of 1st Street and Alameda, the one-story building dates from the early twentieth century but is best known and culturally significant as the location of the Atomic Café. Owners Minoru and Ito Matoba first opened their curiously-named restaurant at another location in Little Tokyo one year after the bombing of Nagaski and Hiroshima, and moved it to 416 East 1st Street in 1965. At this location, the Atomic Café was popular with intellectuals as a late night hang-out, and under the direction of the Matobas' daughter, Nancy, became a destination for the emerging punk rock music scene in the 1970s and 1980s. The building today houses Señor Fish, which continues the decades-long tradition as a gathering place for an eclectic crowd of artists, musicians, and intellectuals. 3

a. DEIR fails to evaluate alternatives that substantially lessen adverse impacts

As mentioned above, it is well established under CEQA that documentation does not meaningfully reduce the impacts of demolition of historic resources. As recognized by the court in *League for Protection of Oakland's Architectural and Historic Resources v. City of Oakland* (1997) 52 Cal.App.4th 896, "A large historical structure, once demolished, normally cannot be adequately replaced by reports and commemorative markers." Therefore, the demolition of the Atomic Café/Señor Fish building would constitute a significant adverse impact under CEQA, and the lead agency is required to evaluate and adopt all feasible alternatives and mitigation measures that avoid or reduce impacts on historic resources.

The DEIR erroneously concludes that documentation was sufficient mitigation under CEQA and fails to evaluate any potentially feasible preservation alternatives to demolition. To ensure adequacy of the environmental documents, the Final EIR must evaluate the feasibility of relocating the train egress/ingress portal in the Underground Emphasis and the underground station in the Fully Underground alterative to avoid demolition of the Atomic Café/Señor Fish building. Since the building is located on the corner of the block, we believe that this could be accommodated.

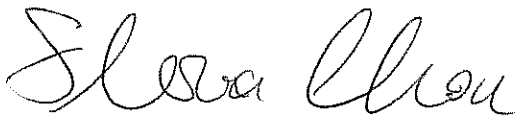
III. Effectiveness of Proposed Mitigation Measures to Avoid Potential Construction Impacts 4

Several historic resources along the route of all build alternatives have been identified as vulnerable to differential settlement and/or damage from ground-borne vibration during construction. In particular, the proximity of the routes to St. Vibiana Cathedral, which dates to 1876, and the 1910 Higgins Building should be studied. Previous Metro projects have resulted in damage to historic resources from such construction effects and it is unclear whether similar pre- and post-construction surveys, geotechnical and vibration investigation and monitoring, building protection measures, and contractor requirements near historic resources were employed. We request additional information concerning lessons learned from prior Metro projects such as the Red and Gold Lines, and examples of comparable projects in which the proposed mitigation measures have been utilized successfully. 4 cont'd

We also urge Metro to include an additional mitigation measure committing to repair substantial damage attributable to the construction of the Regional Connection as determined through the proposed monitoring. Such repairs should conform to the Secretary of the Interior's Standards and should be overseen by a qualified architectural historian or preservation architect in consultation with the City of Los Angeles Office of Historic Resources. 5

Thank you for the opportunity to comment on the Regional Connector Transit Corridor Project Draft EIR. Please feel free to contact me at (213) 430-4211 or fchou@laconservancy.org should you have any questions.

Sincerely,



Flora Chou
Preservation Advocate

Responses to Comments from Los Angeles Conservancy, Chou, Flora

Response to Comment CN14-1

Thank you for your comment. Please refer to Responses to Comments CN14-2 through CN14-5, below, for detailed responses to concerns raised by the commenter regarding historic and cultural resources.

Response to Comment CN14-2

Comment acknowledged. On October 28, 2010, the Metro Board of Directors voted to designate the Fully Underground LRT Alternative as the Locally Preferred Alternative. The alignment of the Fully Underground LRT Alternative does not travel through the 2nd Street Tunnel as with the At-Grade Emphasis LRT Alternative.

Response to Comment CN14-3

Metro appreciates the comments from the Los Angeles Conservancy and the Office of Historic Resources regarding the development of mitigation measures for the impacts to the S. Kamada Restaurant, Atomic Café, Señor Fish, and Coast Imports building. Although the facts of the case for the Office of Historic Preservation and the League for Protection of Oakland's Architectural and Historic Resources v City of Oakland differ in that Metro is already developing an EIR for this project. The Draft EIS/EIR did include alternatives that avoided impacts to the S. Kamada Restaurant, Atomic Café, Señor Fish, and Coast Imports building. However, the Locally Preferred Alternative identified in this Final EIS/EIR would require acquisition of the S. Kamada Restaurant, Atomic Café, Señor Fish, and Coast Imports building property. The S. Kamada Restaurant, Atomic Café, Señor Fish, and Coast Imports building has been significantly altered from its original condition and does not meet the criteria for architectural historic significance. However, this location played an important role in California history as the commenter points out. Metro agrees that mitigation is required for the change to the property. Metro also agrees that additional mitigation measures are warranted to mitigate for the impacts to this historic resource and that the proposed additional mitigation, while not required to reach the CEQA determination in the Draft EIS/EIR, would reinforce that determination. Metro has developed additional mitigation measures to enhance reduction of the impacts to a less than significant level and to be responsive to these comments. These include Metro offering the building for a period of one year following certification of this Final EIS/EIR for the price of one dollar to any party willing to move the building off of the 1st/Central Avenue station site at their own expense. Should no parties come forward, Metro would incorporate materials from the building into the project facilities. Metro would also offer to provide an exhibit commemorating the Atomic Cafe at the Japanese American National Museum or other suitable location, including exploring incorporating such an exhibit into the proposed 1st/Central Avenue station; and developing an individual Historic American Buildings Survey/Historic American Engineering Record (HABS/HAER) submission. Section 4.12, Historic Resources, of this Final EIS/EIR and the Mitigation Monitoring and Reporting Program for the Locally Preferred Alternative (Chapter 8) have been updated accordingly with the new mitigation measures. Please also refer to Response to Comment AL3-101.

Response to Comment CN14-4

Metro utilizes industry standards that are particular to California in identifying mitigation measures for potential ground-borne vibration and settlement near historic and non-historic resources during construction. These measures were identified in Section 4.7, Noise and Vibration, and Section 4.12, Historic Resources, of the Draft EIS/EIR and have been refined and confirmed in this Final EIS/EIR. These measures have been utilized on the Metro Red Line North Hollywood extension and the Metro Gold Line Eastside Extension where Metro completed two miles of tunnel with almost zero settlement near historic and culturally significant structures such as the Boyle Hotel at 1st and Boyle Streets which was built in 1889. In addition, structures at 2130 East 1st Street, Hollenbeck Masonic Lodge, 2415 East 1st Street and 2001-2009 were among some of the historic structures along the alignment where a tunnel boring machine, specifically an earth pressure balance (EPB) machine, was used successfully to limit ground settlement.

Response to Comment CN14-5

Metro has included this measure in the Mitigation Monitoring and Reporting Program for the Locally Preferred Alternative (Chapter 8) of this Final EIS/EIR. Metro will further stipulate that whatever repairs that are done to damaged historic properties are implemented in a manner consistent with the Secretary of the Interior's Standards for Rehabilitation. Metro has consulted with the California State Historic Preservation Officer and other consulting parties concerning this measure and its inclusion in the Mitigation Monitoring and Reporting Program for the Locally Preferred Alternative and the Memorandum of Agreement (MOA) for the project.

Los Angeles, CA 90012-2932

RE: Metro Regional Connector DEIR/DEIS Comments

Dear Ms. Roybal Saltarelli:

The Transit Coalition strongly supports the Metro Downtown Regional Connector. Our comments describe the DEIR/DEIS items we support and the items that need to be changed. Also, the project needs to ensure bike access through station entrances, as directed by the Metro Board resolution. 1, 2

We believe that it is vital to keep the 5th/Flower Station. 7th/Metro is already crowded during peak hours; with the addition of traffic from the Expo, Foothill and Eastside lines, this key station will be severely overcrowded. The station on Flower, with portals at 5th and/or 4th, serves the densest concentration of high-rise buildings in the Western U.S. Many of these commuters would switch to transit if it is close to their destination, but not if they have to walk several blocks up to Bunker Hill. This would reduce congestion and improve air quality. 5th is actually three blocks away from 7th due to Wilshire, the same as between Pershing Square and Civic Center. 3

We support an underground alternative with inclusion of all four stations. 4

Sincerely,

Bart Reed

Bart Reed
Executive Director

CN15

Responses to Comments from The Transit Coalition, Reed, Bart

Response to Comment CN15-1

Thank you for your comment. Support for the project is noted. Please refer to Responses to Comments CN15-2 through CN15-4, below, for detailed responses to concerns raised by the commenter.

Response to Comment CN15-2

Station entrances proposed under the refined Locally Preferred Alternative would accommodate bicycle access in accordance with Metro polices.

Response to Comment CN15-3

Support for the Flower/5th/4th Street station is noted. The Metro Board of Directors voted on October 28, 2010 to designate the Fully Underground LRT Alternative without the Flower/5th/4th Street station as the Locally Preferred Alternative. The deletion of the station was done in an effort to reduce the cost of the project while still meeting the project's purpose and need. An enhanced pedestrian walkway connecting the 4th/Flower Streets area to the existing 7th Street/Metro Center Station would be constructed on Flower Street to improve access to the Financial District. Metro understands the importance of serving the Financial District and believes that the Locally Preferred Alternative still meets the purpose and need of the project despite the station deletion. Deletion of the Flower/5th/4th Street station would result in minimal ridership losses because most riders would use the 2nd/Hope Street station or 7th Street/Metro Center Station, which would service the Financial District. After the October 28, 2010 meeting, the Metro Board of Directors directed staff to meet with the Financial District stakeholders to discuss options for privately funding the Flower/5th/4th Street station, but no funding sources were identified. However, the design of the Locally Preferred Alternative would not preclude a station at 5th and Flower Streets from being built as a possible future, separate project.

Response to Comment CN15-4

Thank you for your comment. Support for an underground alternative with four stations is noted. The Metro Board of Directors voted on October 28, 2010 to designate the Fully Underground LRT Alternative as the Locally Preferred Alternative.

Re: State Clearinghouse No. 2009031043
Los Angeles County Metropolitan Transportation Authority
Regional Connector Transit Corridor Project
Draft Environmental Impact Statement/Environmental Impact Report

Dear Ms. Roybal Saltarelli and Mr. Tellis:

FAST is a non-profit organization dedicated to designing and supporting the implementation of short-term strategies to reduce traffic congestion in Los Angeles by optimizing current transit infrastructure and expanding use of public transit in order to improve our mobility and quality of life.

Pursuant to CEQA/NEPA, we submit the following comments with regard to the Regional Connector Transit Corridor Project:

Metro has proposed three alternatives for the Regional Connector as follows:

- At-Grade Emphasis LRT Alternative;
- Underground Emphasis LRT Alternative; and
- Fully Underground LRT Alternative.

FAST supports the Fully Below-Grade LRT Alternative. We strongly believe that this alignment will best serve employers, employees, students, residents and visitors around the region to and from the downtown area. The project will improve existing at-grade intersections and the flow of traffic downtown, while making public transit more accessible and useful for existing and future users.

1

515 South Flower Street • Sixth Floor • Los Angeles, CA 90071 • 213.233.2542 • Fax 213.613.1903
www.FASTLA.org

Metro has successfully engaged the entire community of stakeholders for the Regional Connector. While there would be some temporary disruption of surface street traffic during the construction phase for stations, the long-term impact of the Fully Below-Grade LRT Alternative would best serve the maximum number of people, providing circulation through downtown in the least intrusive way possible. This option is the safest for a highly pedestrian-used area. 2

We understand that Metro staff currently recommends eliminating the station proposed at 5th and Flower Streets due to potential cost overruns for the Fully Underground LRT Alternative. While FAST supports the 5th and Flower Street Station as important service to a residential, financial, tourist and cultural area currently underserved by transit, we would not want continued inclusion of this potential station to jeopardize Metro's application for federal New Starts program funding for the entire Regional Connector project. 3

However, FAST believes that a station in this area, in the heart of the Financial District and adjacent to the Central Library, is an important way to completely connect the different areas of Downtown Los Angeles. FAST therefore requests that the 5th and Flower Street station continues to be included in the Final EIR and future studies to ensure that this station is not completely eliminated at this time.

FAST congratulates Metro staff members Ann Kerman and Dolores Roybal-Saltarelli, with whom we have worked closely during the development and outreach process for this important project. The outreach efforts of this team and of The Robert Group have been exemplary. 4

We look forward to our continued work with Metro for the long-term success of the Regional Connector project and the Fully Below-Grade LRT Alternative. Please feel free to contact me with regard to any additional support FAST can provide. 5

Sincerely,

Hilary Norton

Los Angeles, CA 90012

Dear Ms. Roybal:

On behalf of over 2,000 dues-paying members, we are writing to express our opposition to the construction of the Downtown Regional Connector. We see this as yet another misguided project whose exorbitant costs far outweigh its transit benefits. Bus riders simply cannot see this project – which duplicates existing rail connections -- as the slightest bit beneficial when it is proposed as part of a Long Range Transportation Plan that reduces bus service and raises fares over the next three decades. We would support a revamped and expanded TSM alternative that would invest not only in shuttle bus service serving downtown, but would also increase Rapid and Local service, keep fares low and fund bus-only lanes county-wide. If this option is not seriously considered, then we support the No-Build alternative. 1

Here are our core objections to the project: 2

- **The Regional Connector duplicates existing rail service at the same time that bus service will see significant reductions in bus service.** Metro has cited duplication of service as one of the major justifications for the reduction of bus service, claiming it cannot afford to maintain this perceived inefficiency in the bus system. Yet the Regional Connector will not create any new connections – it will simply duplicate service with the only benefit being the reduction of travel time by 7 to 12 minutes, and with an enormous construction price tag.
- **The Regional Connector has a minimal transit benefits relative to cost**: As the Draft Environmental Impact Report (DEIR) states, shortening travel time between various downtown Metro Rail stations would yield between 12,300 and 17,400 transit trips per day. Given the high capital cost of the project, it means each new transit daily trip generated by the introduction of this line will cost $11 or $12 per day[1] compared to $1.40 per new rider if the same funds were invested in bus expansion following the strategies of the Bus Riders Union's Civil Rights consent decree.[2] 3
- **Spending $1.25 billion on the Regional Connector is an enormous missed opportunity to improve the bus system:** Leaving aside operations expenses for the Regional Connector, the total annualized capital cost of the project – ranging from $52 million for the At-Grade Emphasis alternative to $72 million for the Underground Alternative – would generate enormous benefits if invested instead in bus capital and service expansion following the strategies employed during the 4

BRU's civil rights consent decree with MTA. *Investing these annualized costs using consent decree strategies could increase system ridership between 100,000 and 140,000 new transit trips per day each year for the next 25 years.*[3] This beats the Regional Connector by more than 800% in new riders generated per year. Considering that the Regional Connector will not begin operation until 2019 whereas bus expansion strategies could be implemented as early as FY2013, investing these funds in "Consent Decree strategy" bus expansion would outperform the Regional Connector by 1100% in terms of ridership over the period of FY2013 to FY2035. 4 cont'd

- **The burden of rail construction, including cost overruns, has been born by bus riders.** As you know all too well, the Civil Rights Consent Decree was born largely out of Metro's practice of raiding the bus system budget in order to cover capital expenses of Rail project – especially all-too-frequent construction cost overruns. As it is, the project's construction budget depends heavily on not-yet-secure funding from the Federal Transit Administration New Starts program. Even after that, there is a $173 million hole in the construction budget of the staff-recommended Underground Alternative. Moreover, with all the complications endemic to Subway construction, we have no reason to believe the DEIR's 10% built-in cost overruns will be sufficient. Given the agency's track record of disrespect for bus riders – both very recent, in the form of service cuts and fare increases, and going back to the early 1990's – we have every reason to believe bus riders will end up paying the price as Metro siphons bus-eligible funds to fill these holes and in turn raises fares and cuts service. Proponents of the 30/10 Initiative argue that this acceleration will save money, but the federal government will not provide money for cost overruns in the form of a loan or a grant. 5

- **The Regional Connector, as a priority project within the 2009 Long Range Transportation and the 30/10 Initiative, will exacerbate the existing operations crisis and require fare increases and service cuts.** For many years, Metro has claimed that fare reductions and service cuts are necessary to close a structural operations deficit in the bus system budget. Some Metro staff member and Board members have blamed this operations deficit on bus expansion required by the BRU's civil rights consent decree with MTA. Yet the agency's current rail expansion plan – of which the Regional Connector is an important component -- will only exacerbate the operations crisis. First because the agency is building what it does not have the money to operate. The major *new* source of Metro Rail operations funds – Measure R 5% rail operations – will not generate enough in 2035 to cover the West Side Subway operations costs plus all of the other rail projects outlined in the 2009 Long Range Transportation Plan.[4] The agency plans to deal with this by 1) raising fares repeatedly; and 2) siphoning off additional money from the bus system budget, which means service cuts. *The result is that LA County's very low income, overwhelmingly Black, Latino and Asian bus riders will bear the burden of this project in its impact on their bus service and by paying higher fares.* If the 30/10 Initiative is implemented as an acceleration plan, this will accelerate this operations crisis into a 10-year rather than 30-year timetable. 6

For all these reasons, we urge the Board of Directors to adopt the "No-Build Alternative" and cease pursuing this project. 7

Best regards,

Esperanza V. Martinez
Lead Organizer, Bus Riders Union

Barbara Lott-Holland
Co-chair, Bus Riders Union

[1] Using annualized costs of $52-$72 million over 40 years, and ridership numbers from: Regional Connector DEIR, Table ES-1. Page ES-15.
[2] Using Consent Decree Strategies, ($1.40/boarding: Marginal capital and operations, minus operating revenue per new passenger). BRU and Ryan Synder. The Bus Riders Union Transit Model. 2009.
[3] Ibid. and MTA Ridership Statistics, http://www.metro.net/news/pages/ridership-statistics/ (10/14/2010)
[4] Based on 2009 Long Range Transportation Plan projections of Measure R revenue over time, the Measure R 5% Rail Operations fund will be $105 million in 2035. The projected annual operating cost of the Subway in 2035 is $67- $150 million, $31 million of which will be covered through reductions of bus service solely on the Wilshire Corridor.

CN17

Responses to Comments from Bus Riders Union, Martinez, Esperanza V.

Response to Comment CN17-1

The Regional Connector's primary purpose is to close a two-mile gap in the Metro light rail network and eliminate transfers from many transit trips. Many existing transit riders would benefit from shorter trip times to, from, and through downtown Los Angeles as a result of the Regional Connector. The Federal Transit Administration New Starts Cost-Effectiveness Index for the proposed project, as of the publication of the Draft EIS/EIR, was $13.68 (a "medium-high" rating), which indicates that the anticipated transportation benefits of the project would be great enough to justify the projected cost. Refer to Chapter 6, Cost and Performance Consideration and Summary Comparison of Alternative, of this Final EIS/EIR for updated information regarding the Locally Preferred Alternative. Connections with intersecting bus lines would be made at the new stations and, as noted in Section 4.17.3.5 of the Draft EIS/EIR and this Final EIS/EIR, the Regional Connector project does not involve any cuts in bus service or fare increases. Metro notes the Bus Riders Union's support for the TSM Alternative, and secondary support for the No Build Alternative. Additional shuttle bus service and bus-only lanes would fail to address the two-mile gap in the light rail system in a way that reduces transfers and improves trip times, and would not provide adequate capacity in the downtown area for the volume of transit passengers anticipated in the coming decades.

Response to Comment CN17-2

Although the Regional Connector would be located near the heavy rail Metro Red and Purple Lines, the primary purpose of the project is to eliminate transfers on the light rail system. New connections between the Metro Gold, Blue, and Expo Lines would be created. Trips from Pasadena to Long Beach, or East Los Angeles to Culver City (once the Expo Line opens) currently require two transfers. By linking these unconnected light rail lines in the Metro system, the Regional Connector would eliminate these transfers and allow a one-seat ride. Travel time savings would range from 7 minutes to 20 minutes or more, depending on the time of day. This constitutes a cost-effective enhancement of transit service, rather than a duplication.

Response to Comment CN17-3

The Regional Connector would shorten travel times between Metro Rail stations system-wide, and would place three new stations in downtown Los Angeles. In addition to the 17,000+ new daily transit trips generated by the Regional Connector, many existing transit trips would be improved with fewer transfers and faster travel times. Approximately 90,000 passengers per day would use the Regional Connector in the year 2035. As mentioned in Response to Comment CN17-1, the Federal Transit Administration cost-effectiveness rating for the project, as of the publication of the Draft EIS/EIR, was $13.68, which indicates substantial transit benefits relative to cost. In addition to the ridership benefits, the Regional Connector could also assist community revitalization and economic development. Refer to Chapter 6, Cost and Performance Consideration and Summary Comparison of Alternative, of this Final EIS/EIR for updated information regarding the Locally Preferred Alternative.

Metro designated the Fully Underground LRT Alternative as the Locally Preferred Alternative in part because it would address the need to reduce transfers system-wide and provide additional transit capacity in the downtown area. Many of the major streets in the downtown area already

carry their maximum practicable volume of buses. Further increases in transit capacity in the downtown area require the use of other modes, such as underground light rail. Buses have and will continue to play an important role in the regional transit system. However, buses cannot meet every transit need and purpose.

Response to Comment CN17-4

The Regional Connector would provide benefits to transit patrons who transfer to the rail system because fewer transfers on the rail system would be needed. Modeling indicates that some bus riders would begin using the rail system in lieu of bus trips once the Regional Connector is built because of the increased reliability and speed. In addition to creating new trips, the Regional Connector would improve trip times and reduce transfers on existing trips. Approximately 90,000 riders per day would use the Regional Connector 16 years after it is projected to open (year 2035), and this figure is expected to grow further in subsequent years. Metro would create new connections with the bus system at the new Regional Connector stations, which would benefit transit riders across Los Angeles County. Implementation of the Regional Connector would not involve reductions in bus service, as noted in Section 4.17.3.5 of the Draft EIS/EIR and this Final EIS/EIR, and would not preclude separate bus system improvements from being made.

Response to Comment CN17-5

As shown in Table 6-6 of the Draft EIS/EIR, bus operating funds would not be used to construct the Regional Connector. Table 6-8 of the Draft EIS/EIR showed that the costs of operating the Metro bus system would be the same for both the No Build Alternative and the build alternatives, demonstrating that the Regional Connector would not result in any cuts to the operating budget for the bus system. As mentioned in Responses to Comments CN17-1 and CN17-3, above, the Regional Connector's favorable FTA Cost-Effectiveness Index makes it competitive for New Starts funding. Metro is currently working to reduce the costs of constructing the Regional Connector. Metro has recently completed tunneling for the Eastside Extension Phase 1 within budget and on schedule, and believes that the contingency included in the Regional Connector's financial plan would be sufficient to cover any unforeseen expenses regardless of the outcome of America Fast Forward (formerly the 30/10 initiative). No fare increases are proposed to cover the Regional Connector's financing. Refer to Chapter 6, Cost and Performance Consideration and Summary Comparison of Alternative, of this Final EIS/EIR.

Response to Comment CN17-6

As discussed in Response to Comment CN17-5, above, Tables 6-6 and 6-8 of the Draft EIS/EIR showed that bus operating funds would not be used to construct or operate the Regional Connector, and bus operations funding would remain unaffected by the project. The Regional Connector project would not involve any bus fare increases or service reductions. Refer to Chapter 6, Cost and Performance Consideration and Summary Comparison of Alternative, of this Final EIS/EIR.

Response to Comment CN17-7

Support for the No Build Alternative is noted. The Metro Board of Directors voted on October 28, 2010 to designate the Fully Underground LRT Alternative as the Locally Preferred Alternative.

Sierra Club comments on the Regional Connector Draft EIS/EIR

We've long sought this vital light rail connection across the downtown Los Angeles gap between the Blue-Expo and Gold Lines. It will provide one-seat convenience for riders to more destinations within downtown and for trips from one side to the other. 1

We support the **Fully-Underground LRT Alternative**, and seek creative funding opportunities to **not eliminate the 5th and Flower station**, such as Propostion A and C for non-subway expenditures, or Los Angeles CRA funding. 2

Darrell Clarke
Angeles Chapter Conservation chair and Transportation co-chair

Responses to Comments from Sierra Club, Clarke, Darrell

Response to Comment CN18-1

Thank you for your comment.

Response to Comment CN18-2

Support for the Fully Underground LRT Alternative is noted. The Metro Board of Directors voted on October 28, 2010 to designate the Fully Underground LRT Alternative as the Locally Preferred Alternative. Metro is actively seeking ways to reduce the costs of the project, and is considering all available funding sources. Proposition A and C funds are largely unusable for the fully underground Regional Connector due to the voter-approved Metropolitan Transportation Authority Reform and Accountability Act of 1998. The City of Los Angeles would provide a portion of the local funding for the Regional Connector.

TO: Metro
FROM: Higgins Building HOA
RE: Comment on Draft EIS/EIR
for Regional Connector Transit Corridor Project

The Higgins Building Homeowners Association represents the owners of the 135 residences and seven commercial units in the 10-story Higgins Building located at 2nd and Main, which is in the path of the proposed rail project.

As we have previously stated, the at-grade and partially underground alternatives are not acceptable to our community: they would divide it, compromise quality of life and put its safety at risk. In the past, we have offered support in principle for the fully underground alternative. However, newly revealed details of that plan in the Draft EIS/EIR also make it unacceptable. We register our protest in the strongest terms. 1

Specifically, as proposed, it would do great harm to the economic and general well being of the businesses and those who make their homes near the 2nd and Broadway proposed station. We ask that this plan be taken off the table and reworked until this and other matters identified here are resolved.

TAKING OF PROPERTY AT 2nd and SPRING

We strenuously object to the taking of the commercial properties on the southeast corner of 2nd and Spring, identified in the report as 206 and 212 S. Spring Street. This quarter-block is the home of the Metropolitan News-Enterprise, Southland Credit Union, 2nd Street Cigars, Blue Cube café and City Employees Club Store. All are part of the fabric of the community and serve its needs.

Why, in the many public meetings on this project, was the prospect of taking these properties never raised? The implication in drawings and public statements has always been that the only parcel to be taken for this portion of the project was the parking lot across 2nd Street from the LA Times. 2

The current proposal would take these additional properties for the most mundane of reasons – to create an empty lot! This underscores lack of community sensitivity and shows a land-grab mentality that in the past has created negative public opinion surrounding so many transportation projects.

Higgins Building 108 West 2nd Street Los Angeles CA 90012

Regarding the property at 206 S. Spring Street, the Draft EIS/EIR states:

> "The entire parcel would be taken and utilized for staging materials and equipment for the Underground Emphasis LRT Alternative (for the entire alignment, not just the adjacent station options). Optional station entrance locations are also located on this site, though not all of the optional station entrances would be constructed."

--The destruction of activated buildings for the purpose of creating a construction staging and parking site shows complete lack of understanding of what a hard-won resource an established business is in downtown LA at any time, but in particular during this period of great economic distress in our city, state and nation.

--There are alternatives for staging and parking areas. Surely given the number of empty lots in the vicinity—especially obvious is the full city block at 2nd and Broadway, 1st and Hill–it is not necessary to level occupied buildings.

-- The proposed station has always been described as being at 2nd and Broadway – not 2nd and Spring. If an entrance is needed in addition to the one on the block directly across from the LA Times, it can be placed on the wide-open lot on the other side of Broadway. That would be in keeping with the station's particular appeal to the Bring Back Broadway effort and proposed streetcar alignment. And it would not tear down established businesses. 2 cont'd

-- Taking of the property on the southeast corner of 2nd and Spring will put at risk the survival of the businesses on the site, in particular the Metropolitan News-Enterprise, which serves a wide legal community and has location-specific business needs and difficult-to-relocate printing presses. Note: The Draft EIR/EIR errs in not including the newspaper in the list of businesses operating in the Wilcox Building.

-- The report states that demolition of the buildings would "displace approximately 40 employees" but it assumes those jobs would not be lost, only moved. That assessment does not take into account the particular combination of location, space and affordability that allows small businesses such as the Blue Cube to stay in business. It apparently does not take into account at all the 47 employees of the Metropolitan News-Enterprise.

-- The property has a historic pedigree. The larger of the two buildings, the Wilcox, was built in 1896 and was originally home to the California Club. While its upper floors no longer remain, elements of its elegant origins are still visible and add to the character of the neighborhood.

– Taking of the properties will isolate and further stress businesses in the Higgins Building during a four-year-or-more construction process. There is a huge difference between being on a street with other businesses and being on one with a long-term construction site. Commercial businesses located in the Higgins that rely on high-volume foot and vehicle traffic that would be highly impacted include The Edison nightclub, Lilya's China Bistro, the Charcoal Grill, Pitfire Pizza and Groundwork Coffee, not to mention the multiple live-work businesses operating from residential lofts.

– Turning the land immediately adjacent to the Higgins Building into a staging site for materials and equipment will create unacceptable high-volume noise and traffic disturbance to residents--not for a limited period, but for years. There is absolutely no buffer between these lots and where people live, work and sleep. It is estimated in the report that at least 15-20 trucks a day will be coming and going from the site. 2 cont'd

-- Taking these commercial properties would create a vacuum in the community before and after construction: no one wants to sign leases on a doomed property; after construction, protracted uncertainty and debate about the fate of the site would precede any decision and ultimate new construction.

TRAFFIC DISRUPTION

The cut-and-cover proposal for the 2nd and Broadway station is shown extending significantly beyond the site of the proposed station. Drawings exhibited at public hearings showed the station contained between Broadway and Spring streets; the plans in the Draft EIS/EIR now show it crossing both of those streets and extending an additional half block in each direction. Disruption to surface street traffic would be widespread. 3

-- We find no proposal for mitigating traffic disruption in this plan: it should not and must not go forward without one. 4

-- We urge Metro planners to reduce the footprint of the cut-and-cover construction. It is vital that disruption of access by residents and by customers, clients and workers with business in buildings on 2nd Street be kept to an absolute minimum. 5

– What access will there be to 2nd Street between Spring and Main during construction? The front door of the Higgins Building, which is the primary entrance and exit for 135 residences, is on the block. So is drop off and pick up for customers and vendors of the Edison, Charcoal Grill and Pitfire Pizza. Prolonged closure of this street or limited access will have dramatic and potentially crippling impact. 6

MITIGATION OF CONSTRUCTION ACTIVITY

Having just recently endured construction of the LAPD Headquarters and its parking facility, residents and businesses in the Higgins are very aware of the impact of major construction projects. Among the issues we know will arise: Vibration to the building, diminished air quality, dust and dirt, noise and smell of heavy equipment operation, ear-piercing beeping every time a vehicle backs up, lack of parking spaces and work being conducted during the day and at night (when we are trying to sleep!). 7

We ask that Metro conduct a separate meeting with residents/business owners in the Higgins Building to address point-by-point mitigation beyond the boilerplate language in the Draft EIS/EIR. We would anticipate a good faith effort on the part of Metro to develop mitigation on these and related issues, and then monitor implementation of that agreement.

PARK AT LAPD HEADQUARTERS

The community park adjacent to the new LAPD headquarters is not listed among park resources. We ask that it be included in the EIS/EIR and that efforts be made to ensure that access is not limited and that maintenance is not impaired during construction. 8

MEMORANDUM OF AGREEMENT

We ask that a Memorandum of Agreement (MM-BE-5) be added to proposed mitigations for the Higgins Building to resolve any adverse effects as a result of the project. We are especially concerned about the potential impact of vibration or settlement during construction and operation of a completed line.

In addition to the age of the building and its physical closeness to the project, the basement of the Higgins houses the Edison, a 14,000-square-foot nightclub. At a depth of two-stories underground, a portion of the club extends under the 2nd Street sidewalk, beyond the primary boundaries of the building. 9

We hope the assumption in the Draft EIR/EIS is correct, that with mitigation there will be minimal disturbance to the building and its occupants—in the club and elsewhere—but we are seeking additional assurance.

CN19

The importance of a memorandum (MM-BE-5) to the building is directly referenced in the report, including in this paragraph from Appendix X, p.186:

> CEQA Impact Analysis for Historical Resources
>
> The potential for construction-related vibration could cause a substantial adverse change that would impair the Barker Brothers, Roosevelt, General Petroleum Mobil Oil Building, Superior Oil Building, California Club, Los Angeles Central Library 2nd Street Tunnel, Mirror Building, Cathedral of Saint Vibiana, the Cathedral of Saint Vibiana Rectory, or the Higgins Building. The implementation of MM-BE-2, MM-BE-3, and MM-BE-5 would reduce the potential impacts to a less than significant level.

9 cont'd

Memoranda are being developed for nearby historic properties and it is entirely appropriate that one be developed for the 100-year-old Higgins Building.

HISTORIC DESIGNATION

We believe the Draft EIS/EIR errs in not including the Higgins Building among those eligible for listing in the National Register. We ask that this assessment be reexamined and, upon confirmation of the building's eligibility, that the report and all associated listings be corrected.

The consulting firm hired by Metro makes a number of incorrect assumptions and errors of omission and commission. Among them is misidentifying the building's architect as A.L. Hurley. The architect is A.L. Haley.

The consultant, SWCA of Pasadena, states that the building is not eligible because it is "not associated with any broad patterns of events nor is its architecture or engineering" and because "alterations to the building have reduced integrity of its original design." In describing the condition of the Higgins Building, Metro's consultant dismissively describes the façade as being of "painted concrete" rather than like "rubbed sandstone." The entire building is made of concrete, including the façade, and that is integral to its historic significance and relevant engineering.

10

The Higgins is of monolithic concrete construction and was the first high-rise in Southern California built of steel reinforced concrete. City code had to be changed to allow concrete construction to a height of 10 stories. The Higgins' architect and engineer, A.L. Haley and A.C. Martin, were both innovators and pioneers in the use of concrete. (There is evidence of only one other concrete high-rise from that era on the West Coast, a 10-story hotel in San Francisco.)

CN19

The Higgins Building played a vital role in the history of oil development in Southern California, which in the 1920s was the world's 4th largest producer of oil. The Higgins was home for 38 years to major player General Petroleum (founded in the Higgins), Standard Oil (until 1924 when it built its own headquarters), Union Oil's National Exploration Company, Puente Oil and others as well as attorneys and agents associated with the industry.

Among its credits, General Petroleum—a precursor of Mobil Oil--discovered the largest oil field ever in Southern California. The Wilmington field has been in continuous operation since 1932, when General Petroleum drilled the first of what would become more than 6,000 wells in a reservoir that stretches from San Pedro to offshore Seal Beach. (In the late 1890s, derricks even bloomed near the site of the Higgins, in a shallow oil field north of 2nd and west of Broadway.)

10 cont'd

While there have been alterations to the building during its long history, many are part of its important historical narrative. It has lost some—far from all--of its original detail. What has not been compromised is the amazing design and construction that have kept it standing when so many others around it have had to be rebuilt or been lost altogether.

We urge Metro to reevaluate. The Higgins Building should indeed be considered eligible for listing in the National Register. Give the benefit of any doubt that might exist to a building that deserves the highest level of protection possible, not the least required.

Responses to Comments from Higgins Building HOA, Agnew, Jonno

Response to Comment CN19-1

Comment acknowledged. Impacts associated with the Locally Preferred Alternative (Fully Underground LRT Alternative) were analyzed and mitigation was incorporated to reduce impacts to the maximum extent feasible in Chapter 3, Transportation Impacts and Mitigation, and Chapter 4, Environmental Analysis, Consequences, and Mitigation, of the Draft EIS/EIR and this Final EIS/EIR. Please refer to Responses to Comments CN19-2 through CN19-10, below, for detailed responses to concerns raised by the commenter about the Fully Underground LRT Alternative.

Response to Comment CN19-2

The Metro Board of Directors voted on October 28, 2010 to remove the Wilcox and Olender Buildings (APNs 5149-007-006 and 5149-007-005) from consideration as acquisitions for the Regional Connector project. Only a subsurface easement beneath APN 5149-007-006 would be required for construction of the Locally Preferred Alternative.

Response to Comment CN19-3

The alignment maps for the project, such as the one shown in Figure 2-10 of the Draft EIS/EIR, show station locations, but not the extent of cut and cover activities. The extent of cut and cover activities was shown in Figure 2-13 of the Draft EIS/EIR, and specifically for the 2nd/Broadway station in Figure 2-19 of the Draft EIS/EIR and this Final EIS/EIR. Disruption to surface street traffic would be mostly confined to periods at the beginning and end of construction activities, when the temporary decking is not in place. This was described in further detail in Section 4.18.2.5.1 of the Draft EIS/EIR and this Final EIS/EIR. Metro will implement the mitigation measures shown in the Mitigation Monitoring and Reporting Program for the Locally Preferred Alternative (Chapter 8) of this Final EIS/EIR to offset construction-related traffic impacts. It is Metro's goal to minimize traffic disruption during the construction process.

Response to Comment CN19-4

Mitigation measures for construction-related traffic disruption are provided in Section 3.4.1.2 of the Draft EIS/EIR and in the Mitigation Monitoring and Reporting Program for the Locally Preferred Alternative (Chapter 8) of this Final EIS/EIR.

Response to Comment CN19-5

Metro has refined the Locally Preferred Alternative since publication of the Draft EIS/EIR to reduce the amount of cut and cover construction needed on 2nd Street. Metro would maintain access to adjacent residences and businesses throughout the construction phase of the project.

Response to Comment CN19-6

Access to buildings along 2nd Street between Spring and Main Streets would be maintained throughout the construction phase of the project. No cut and cover construction would occur in front of the Higgins Building, including The Edison, Charcoal Grill, and Pitfire Pizza. Street closures for the cut and cover construction occurring west of the Higgins Building would be

consistent with the description provided in Section 4.18.2.5.1 of the Draft EIS/EIR and this Final EIS/EIR. It is Metro's goal to minimize street closures during the construction process.

Response to Comment CN19-7

During preparation of this Final EIS/EIR, Metro met with the Higgins Building Home Owners Association (HOA) to discuss the refined Locally Preferred Alternative.

Response to Comment CN19-8

The landscaped area at the new LAPD headquarters is not owned or operated by the municipal parks and recreation department, does not serve a primarily recreational function, and does not qualify as a park under CEQA or Section 4(f) of the United States Department of Transportation Act of 1966.

Response to Comment CN19-9

A Memorandum of Agreement will be prepared in coordination with the State Historic Preservation Officer for properties listed on the National Register of Historic Places or eligible for listing. The Higgins Building was determined to be ineligible for listing on the National Register of Historic Places per analysis in the building inventory at the end of Appendix X (Cultural Resources - Built Environment) of the Draft EIS/EIR and Appendix X (Cultural Resources - Built Environment(Updated)) of this Final EIS/EIR; therefore, appropriate mitigation measures for the Higgins Building are included in the Mitigation Monitoring and Reporting Program for the Locally Preferred Alternative (Chapter 8) of this Final EIS/EIR in lieu of the Memorandum of Agreement. Metro is aware of the configuration of the Higgins Building's basement, and appreciates the confirmation from the homeowners association. Metro believes that the impact conclusions in the Draft EIS/EIR are correct. The Memorandum of Agreement is necessary for other historic buildings in the area that are listed on the National Register of Historic Places or eligible for listing. The analysis in Section 4.12.1 of the Draft EIS/EIR relied on Appendix X, Cultural Resources – Built Environment, to arrive at refined conclusions concerning the necessity of candidate mitigation measures. Metro is committed to implementing the mitigation measures in the Mitigation Monitoring and Reporting Program for the Locally Preferred Alternative (Chapter 8) of this Final EIS/EIR in a manner similar to the requirements of the Memorandum of Agreement.

Response to Comment CN19-10

Metro reviewed the background research and other information on the Higgins Building, including the application for California Landmark Status. As indicated in the historic property inventory form, the building is eligible for the California Register due to its association with Job Harriman and Clarence Darrow. Background research did not indicate that the building is eligible for the National Register under Criterion B for its association with these individuals. Although the building had tenants who were noted for their involvement with the development of the oil industry in California, background research did not indicate that the Higgins Building is the location of significant events relating to those activities, therefore the building is not eligible for the California Register under Criterion 1 or the National Register under Criterion A. Due to the loss of its integrity of design, workmanship and materials from alterations, the building was recommended as not eligible for the California Register under Criterion 3 or the National Register of Historic Places under Criterion C. The State Historic Preservation Officer

reviewed the inventory form and concurred with Metro's determination on June 1, 2010. No additional information has been presented to indicate that the building is eligible for the National Register.

October 1, 2010

RE: Comments on Draft EIS/EIR for Regional Connector

Dear Ms. Roybal-Saltarelli:

The Little Tokyo Community Council (LTCC) appreciates the opportunity to comment on the Draft EIS/EIR for the proposed Regional Connector. The positive working relationship and open dialogue have helped the community actively participate in the process to date. We offer the following general comments, which are followed by specific comments on the EIS/EIR:

1. The LTCC strongly believes that the Fully Underground alternative is the only acceptable option as the Locally Preferred Alternative that addresses its concerns about the environmental, economic, social, and cultural impacts to the community. As such, it supports Metro's finding that "the Draft EIS/EIR does designate the Fully Underground LRT Alternative…as a staff recommended Preferred Alternative based on the technical analysis…and input received from the community." We concur that the Fully Underground Alternative "was developed to best address community concerns simultaneous with cost, operational, and design concerns." Further, the analysis in the EIS/EIR shows it is clearly the best performing alternative from a ridership, travel time savings, environmental, noise, safety, cost-effectiveness, and social impact perspective. It is also nearly the cheapest alternative to operate and maintain over time. Please note that our support for the Fully Underground alternative is contingent on satisfactory acceptance of LTCC's proposed mitigation measures identified on April 27, 2010. The other alternatives pose significant, disproportionate impacts on Little Tokyo that are unacceptable. 1

2. The EIS/EIR should correct its assessment of the impacts of the At-Grade Emphasis and Underground Emphasis alternatives. The draft understates the environmental impacts on the Little Tokyo community of the grade separations required along Alameda Street that would physically bisect the Little Tokyo community, potential impacts if tunnel boring were to be initiated from 2nd/Central, and the aesthetic impacts associated with at-grade LRT operations through our community. As such, these two alternatives would place disproportionate burdens on a minority community in the areas of Transit Service Equity Deterioration and Community and Neighborhood Impacts.

3. In its letter to Metro dated April 27, 2010, the LTCC strongly urged Metro to initiate tunnel boring activities from 2nd/Flower/Hope to minimize construction impacts on the Little Tokyo community. If Metro cannot commit to initiate TBM activities at 2nd/Flower/Hope until Preliminary Engineering is complete, the EIS/EIR should more clearly distinguish the extent and duration of construction impacts that could affect Little Tokyo if boring begins at 2nd/Central. This information is critical to determining whether the community will endure disproportionate impacts during construction activities.

4. While many mitigation measures are identified throughout the document, the recommendations from the LTCC are segregated as a package of candidate measures to be considered by Metro and FTA. Please confirm the process for approving mitigation measure recommendations and whether this differs from mitigation measures cited elsewhere in the document.

5. The LTCC calls for Metro to formalize an agreement with the Little Tokyo community that provides us with a substantial role in decision-making during the Preliminary Engineering, Final Design, and construction phases that addresses:

    a. Little Tokyo's formal involvement in the development and approval of mitigation measures for the Little Tokyo community,
    b. Little Tokyo's formal involvement in the monitoring of mitigation measures through the Mitigation Monitoring Plan,
    c. How to provide a sufficient safety net for Little Tokyo businesses that will be affected during construction,
    d. Redevelopment of the Office Depot block.

1 cont'd

6. The Draft EIS/EIR does not reflect the language adopted by the LTCC on May 25, 2010 that included refinements to its comments on the pending environmental analysis. These changes stem from additional comments from the Little Tokyo community in late April and amend comments that were transmitted to Metro in our letter dated April 27, 2010:

    a. Expand the safety net for Little Tokyo businesses that will be affected during construction. This must include having Metro provide additional financial and other resources to the community and/or businesses to provide more targeted marketing, as well as financial compensation to local businesses for any loss in gross sales. The process for establishing eligibility, quantifying financial assistance or compensation, and related details would be established jointly between Metro and Little Tokyo stakeholders.
    b. Metro shall work with the Little Tokyo community businesses to ensure no adverse impacts to business operations prior to relocation of or protection of in-place utilities and during construction activities. The LTCC and Metro shall consider establishing a Business Interruption Committee that will streamline Metro's communication with the community, avoid adverse business interruptions, and ensure rapid resolution of unforeseen problems. This committee shall include local businesses and property owners.

Thank you for your consideration. We look forward to continuing to work with Metro to address appropriate mitigation measures that will address our community's concerns. 1 cont'd

Sincerely,

Bill Watanabe
Chair, Little Tokyo Community Council

Encl. Detailed comments on Draft EIS/EIR

Little Tokyo Community Council

Detailed Comments

Executive Summary

7. The LTCC supports the statement that "the Draft EIS/EIR does designate the Fully Underground LRT Alternative…as a staff recommended Preferred Alternative based on the technical analysis…and input received from the community" (Page ES-5). We concur that it "was developed to best address community concerns simultaneous with cost, operational, and design concerns." Further, the analysis the EIS/EIR shows it is clearly the best performing alternative from a ridership, travel time savings, environmental, and social impact perspective. From the Little Tokyo community perspective, it is the only alternative that adequately addresses our concerns about environmental, economic, social, and cultural impacts to the community. The other alternatives pose significant disproportionate impacts on Little Tokyo.
8. The EIS/EIR incorrectly characterizes the impacts of the At-Grade analysis by understating its environmental impacts on the Little Tokyo community. Specifically, the project would place disproportionate burdens on a minority community in the areas of:
    a. Transit Service Equity Deterioration
    b. Community and Neighborhood Impacts.
9. The EIS/EIR incorrectly concludes that there would not be any significant unavoidable environmental justice impacts for the At-Grade Emphasis alternative. The EIS/EIR should conclude that the impacts are significant for two reasons:
    a. The grade separation of a vehicle underpass and pedestrian overpass at Temple and Alameda to route traffic under the rail tracks would physically divide Little Tokyo along Alameda. This would significant affect the cultural integrity of the community by separating the many temples and residents east of Temple from the core of Little Tokyo. The pedestrian overpass would be a significant barrier to elderly residents who travel east-west across Alameda.
    b. The grade separation plan is comparable to the Underground Emphasis alternative, which was found to have significant "Community and Neighborhood" impacts. The EIS/EIR should be revised to be consistent with this finding for the At-Grade emphasis alternative.

1 cont'd

Chapter 1 (Purpose and Need)

10. The Draft EIS/EIR fails to acknowledge the existence of Little Tokyo in Section 1.4.2 (Project Area Ethnicity). Given its status as one of only three Japantowns in the nation and the environmental justice concerns that are important to Metro, Little Tokyo should be mentioned in the Purpose and Need chapter.

Chapter 2 (Alternatives Considered)

11. Page 2-21, Section 2.3.4.4. The analysis of pedestrian circulation impacts at Temple and Alameda Street from the At-Grade Emphasis alternative fails to adequately describe likely impacts. The construction of a pedestrian overpass to "minimize delays (of rail service) at the intersection of Temple and Alameda" comes at the expense of increasing travel time for pedestrians that must navigate the overpass to cross Alameda. Given the significant concentrations of elderly residents and merchants in the area, this will pose a significant impact on pedestrian circulation, particularly from temples and residences east of Alameda to the heart of Little Tokyo that lies west of Alameda. This represents a disproportionate impact on local residents and pedestrian circulation to accommodate reduced travel time for the regional Metro Rail system. The EIS/EIR should be revised to accurately portray the impact of pedestrian circulation.
12. Page 2-31, Section 2.3.6.4. The EIS/EIR understates the impact of the Underground Emphasis alternative on pedestrian circulation at Alameda Street by stating it will "require relatively small changes to surface traffic and pedestrian circulation patterns." The construction of a pedestrian overpass at 1st and Alameda comes at the expense of increasing travel time for pedestrians that must navigate the overpass to cross Alameda. Given the significant concentrations of elderly residents and merchants in the area, this will pose a significant impact on pedestrian circulation, particularly from temples and residences east of Alameda to the heart of Little Tokyo that lies west of Alameda. This represents a disproportionate impact on local residents and pedestrian circulation to accommodate reduced travel time for the regional Metro Rail system. The EIS/EIR should be revised to accurately portray the impact of pedestrian circulation.
13. Page 2-34, Section 2.4.5. The EIS/EIR remains silent on whether tunneling would involve single boring followed by a reverse boring in the other direction, use of two TBMs concurrently, or use of a single, wider boring. It is assumed that the EIS/EIR assumes the boring approach that would result in a worst-case scenario for construction impacts.
14. Page 2-38, Figure 2-13. The EIS/EIR depicts the block between 1st, 2nd, Central, and Alameda as being the site for an open cut. However, Metro has indicated that the existing development on the east side of Central between 1st and 2nd may be spared from demolition during construction. Given the orientation of any subway alignment under the property, every effort should be made to avoid demolishing existing buildings that front on 1st Street, including the former Café Cuba restaurant, Weiland's Brewery, and other nearby buildings.

1 cont'd

Chapter 3 (Transportation Impacts and Mitigation)

15. Page 3-4, Section 3.1.3. The EIS/EIR should clarify that the assessment of parking impacts also considers off-street parking spaces that would be affected by the construction or operation of the project. Chapter 4 in fact accounts for off-street parking.

16. Page 3-4, Section 3.1.4. The determination of significance for pedestrian circulation should be clarified to include detours that might lengthen bicycle commutes or pedestrian routes or travel time…"

17. Section 3.2.2.1, Table 3-9. Please confirm the existing LOS B and C at Alameda/1st Street in the morning and evening peaks, respectively. These don't correspond with empirical observations.

If these are correct, please note that this is due in large part to the closure of westbound lanes over the Los Angeles River.

18. Page 3-8, Table 3-3. The overview of ridership on bus lines servicing the project area omits LADOT Commuter Express 438, DASH, and possibly other LADOT lines. If Table 3-3 is intended to exclusively identify Metro lines, it should be labeled as such.

19. Page 3-17, Section 3.2.3. As noted earlier, any assessment of existing parking conditions in the study area must include an inventory of any parking facilities that would be affected by the proposed construction or operation of the project. This includes off-street spaces on the block bounded by 1st, 2nd, Central, and Alameda. Chapter 4 in fact accounts for off-street parking.

20. Page 3-37, Section 3.3.3.2. As noted earlier, the operation of an At-Grade Emphasis LRT system would require construction of a pedestrian overpass at Temple and Alameda that would impact the length and travel time for pedestrian travel. Given the high concentration of elderly residents in Little Tokyo, this impact on travel times would be even greater. This impact should be considered significant.

21. Section 3.3.3.2.2, Figure 3-7. Please explain how the intersection of Alameda/1st Street improves over existing conditions in the year 2035. This "beneficial change in LOS" is counterintuitive given the extent of growth projected in the study area through 2035.

22. Section 3.3.4.2.2, Figure 3-9. Please explain how the intersection of Alameda/1st Street improves over existing conditions in the year 2035. This "beneficial change in LOS" is counterintuitive given the extent of growth projected in the study area through 2035.

1 cont'd

23. Section 3.3.4.2.2. Although this section concludes that the alternative would have a significant impact because of the seven intersections that would be impacted, the analysis needs to analyze and discuss the impact that the creation of the portal and the at-grade alignment to access the station at Alameda/1st. This is a huge impact on the area and should be discussed in terms of the operational impact this configuration has on the local street system. The actual impacted intersections in terms of LOS is minor in comparison to this potential impact. It must be evaluated in terms of operations, safety, access, etc., not just LOS.

24. Page 3-43, Section 3.3.4.2.3. In the analysis of the Underground Emphasis, the EIS/EIR fails to account for the demolition of off-street parking spaces on the block bounded by 1st, 2nd, Central, and Alameda. Removal of these spaces will likely have an impact on existing and proposed parking in Little Tokyo and should be analyzed. Chapter 4 in fact accounts for off-street parking.

25. Page 3-44, Section 3.3.4.2.4. The operation of an Underground Emphasis LRT system would require construction of a pedestrian overpass at 1st and Alameda that would impact the length and travel time for pedestrian travel. Given the high concentration of elderly residents in Little Tokyo, this impact on travel times would be even greater. This impact should be considered significant.

26. Page 3-47, Section 3.3.5.1.1. The EIS/EIR should clarify whether construction of the Fully Underground alternative would require temporary closure of lanes on 2nd Street and Central for

relocation of utilities and cut-and-cover activities. The Draft does not indicate closure will be needed on these two streets.

27. Page 3-48, Section 3.3.5.1.2. The EIS/EIR remains silent about where tunnel boring activities would be initiated, stating that "[r]outes and disposal sites will be confirmed during the preliminary engineering phase…" If Metro cannot confirm that tunnel boring will not be initiated from Little Tokyo, the EIS/EIR should assume a worst-case scenario of impacts for Little Tokyo so that the full extent of traffic impacts, including dirt hauling operations, during construction is understood.

28. Page 3-49, Section 3.3.5.1.3. In the analysis of the Fully Underground alternative, the EIS/EIR fails to account for the demolition of off-street parking spaces on the block bounded by 1st, 2nd, Central, and Alameda during construction. Removal of these spaces will likely have an impact on existing and proposed parking in Little Tokyo and should be analyzed.

29. Page 3-50, Section 3.3.5.2.2, Figure 3-11. Please explain how the intersection of Alameda/1st Street improves over existing conditions in the year 2035. This "beneficial change in LOS" is counterintuitive given the extent of growth projected in the study area through 2035.

30. Page 3-51, Section 3.3.5.2.2. Please explain how the intersection of Alameda/1st Street improves over existing conditions in the year 2035. This "beneficial change in LOS" is counterintuitive given the extent of growth projected in the study area through 2035.

31. Page 3-51, Section 3.3.5.2.2. It should be noted that there are only three impacted intersections from this alternative, none of them in Little Tokyo. From the LTCC's perspective, this alternative has no impacts on Little Tokyo.

32. Page 3-51, Section 3.3.5.2.3. In the analysis of the Fully Underground alternative, the EIS/EIR fails to account for the demolition of off-street parking spaces on the block bounded by 1st, 2nd, Central, and Alameda during operations. Removal of these spaces will likely have an impact on existing and proposed parking in Little Tokyo and should be analyzed. Chapter 4 in fact accounts for off-street parking.

33. Section 3.4.1.3. The analysis of parking and mitigation measures is too qualitative and conceptual to accurately gauge project impacts. There needs to be a much more detailed description of at least the mitigation options that should be considered for this program. The EIS/EIR should be more quantitative in the parking analysis, with the locations and the type of users for the various types of parking provided, both for the interim during construction and for the permanent during operation of the system. It is impossible to evaluate the parking program that does not discuss any of these items

1 cont'd

Chapter 4 (Environmental Analysis, Consequences, and Mitigation)

34. Page 4-23, Section 4.2.3.4.3. LTCC agrees that the removal of off-street parking spaces from the Underground Emphasis alternative could be an "adverse effect with respect to environmental justice" if impacts are not fully mitigated.

35. Page 4-30, Section 4.2.4.4. While the issue of loading spaces at JANM is discussed in Chapter 3, the issue should be cited again in the displacement discussion, with appropriate mitigation included in this section.

36. Page 4-42, Section 4.3.2.4.6. The EIS/EIR should note that the Little Tokyo community exists on both the west and east sides of Alameda Street.

37. Page 4-43, Table 4.3-4. The overview of impacts to community and neighborhoods should be revised to reflect:

    a. The At-Grade Emphasis LRT can physically divide the Little Tokyo community because of the physical operation of LRT trains along surface streets that visually bisect these thoroughfares and because of the physical grade separation at Temple and Alameda that will create physical barriers to cross Alameda Street by walking or bicycling.
    b. The Underground Emphasis LRT can physically divide the Little Tokyo community because of the physical grade separation at 1st and Alameda that will create physical barriers to cross Alameda Street by walking or bicycling.
    c. The At-Grade Emphasis LRT can significant impair community mobility in Little Tokyo through the physical grade separation at Temple and Alameda that will create physical barriers to cross Alameda Street by walking or bicycling.
    d. The Underground Emphasis LRT can significant impair community mobility in Little Tokyo because of the physical grade separation at 1st and Alameda that will create physical barriers to cross Alameda Street by walking or bicycling.

1 cont'd

38. Page 4-45, Section 4.3.3.4. While the EIS/EIR does not commit the project to initiate TBM activities at a particular location, it does confirm that construction impacts would be more significant in the Financial District and Little Tokyo. Please distinguish the extent of community and neighborhood impacts in Little Tokyo from dirt hauling and other operations if: a) TBM begins at 2nd/Central or near Bunker Hill.

39. Page 4-311, Section 4.17.5. The Draft EIS/EIR does not reflect the language adopted by the Little Tokyo Community Council (LTCC) on May 25, 2010 that included refinements to its comments on the pending environmental analysis. These changes stem from additional comments from the Little Tokyo community in late April and amend comments that were transmitted to Metro in our letter dated April 27, 2010. The approved changes are shown below in underline.
    c. Expand the safety net for Little Tokyo businesses that will be affected during construction. This must include having Metro provide additional financial and other resources to the community and/or businesses to provide more targeted marketing, as well as financial compensation to local businesses for any loss in gross sales. The process for establishing eligibility, quantifying financial assistance or compensation, and related details would be established jointly between Metro and Little Tokyo stakeholders.
    d. Metro shall work with the Little Tokyo community businesses to ensure no adverse impacts to business operations prior to relocation of or protection of in-place utilities and during construction activities. The LTCC and Metro shall consider establishing a Business Interruption Committee that will streamline Metro's communication with the community and avoid adverse business interruptions. This committee shall include local businesses and property owners.

40. Page 4-311, Section 4.17.5. Please add the following mitigation measure to the list of options suggested by the LTCC for inclusion in the Final EIS/EIR:
    a. Provide free business support technical assistance to local businesses on strategies for business development that can minimize any adverse impacts of construction. This can include, but not be limited to, assistance with marketing, accounting, or finance.

41. Page 4-311, Section 4.17.5. While many mitigation measures are identified throughout the document, the recommendations from the LTCC are segregated as a package of candidate measures to be considered by Metro and FTA. Please confirm the process for approving mitigation measure recommendations and whether this differs from mitigation measures cited elsewhere in the document.

Chapter 6 (Cost and Performance Considerations)

42. Please note that the capital costs of the Fully Underground alternative include all stations originally considered in the initial evaluations. Any efforts to reduce capital costs for this alternative should focus on opportunities for open cut stations, as well as eliminating any of the three stations to the west, including Flower Street between 4th and 5th, not on any changes to the fully underground system design at the proposed Little Tokyo station.

43. LTCC concurs with the EIS/EIR's finding that the operating and maintenance costs for the Fully Underground alternative are lower than the TSM and At-Grade Emphasis alternatives.

44. Page 6-19, Table 6-15. The overview of the mobility benefits of each alternative clearly confirm that the Fully Underground alternative provides the most benefit in reducing congestion countywide.

45. Page 6-21, Table 6-16. The assessment of transit system user benefits for all alternatives confirms that the Fully Underground alternative provides the most "bang for the buck" and will be most competitive in Metro's pursuit of Federal Transit Administration New Starts funding.

46. Page 6-22, Section 6.6.1. The description of the evaluation methodology should acknowledge the importance of providing proportional benefits to local communities like Little Tokyo that are affected by construction to benefit the regional transit system.

Chapter 7 (Public Agency Outreach)

47. Page 7-7. In the list of stakeholders consulted, please add the Little Tokyo Community Council under Community Organizations, Neighborhood Groups, and Homeowner Associations.

48. Page 7-21. Please note that the LTCC's PCPC is the Planning and Cultural Preservation Committee.

We are expecting to meet with representative from MRCT's to discuss how the Regional Connector will affect Zenshuji but prefer to contact me to set up talk a meeting.

Thanks

D. Kumme

RE: Public Comments on the Regional Connector EIR

Dear Los Angeles County MTA and the Federal Transit Administration:

Thank you for providing the opportunity to respond to the Draft Regional Connector EIR. Los Angeles Streetcar, Inc., is a 501(c)(3) public-private partnership dedicated to building a modern streetcar system in Downtown Los Angeles. We have been coordinating and planning with LACMA to ensure the forthcoming streetcar project fully integrates with the Regional Connector and existing transit infrastructure.

We are writing to strongly support the **Fully Underground LRT Alternative**. Developing multi-mobility opportunities and transit connectivity in the center of downtown Los Angeles will help the region attract and retain businesses, visitors, and transit riders. The Regional Connector will play a vital role in reducing travel times and transaction costs, and by finally connecting the region's rail lines together, will greatly increase worker mobility. All of this is a benefit to Downtown as a whole and the streetcar.

By including a fully underground portal between **Broadway and Spring St.**, the Regional Connector will significantly improve connections to downtown's most populous communities and neighborhoods. Constructing underground portals will ensure that the streetcar system can easily and effortlessly integrate with the regional connector, and will provide a seamless transfer point between the LRT and streetcar.

Again, we are in full support of the **Fully Underground LRT Alternative** and the underground **Broadway/Spring St.** portals.

1

Sincerely,

Dennis Allen
Executive Director
Los Angeles Streetcar, Inc.

Responses to Comments from Los Angeles Streetcar, Inc., Allen, Dennis

Response to Comment CN22-1

Thank you for your comment. Support for the Fully Underground LRT Alternative and pedestrian entrances to the 2nd/Broadway station is noted. The Metro Board of Directors voted on October 28, 2010 to designate the Fully Underground LRT Alternative as the Locally Preferred Alternative.

VOLUME F-3

RESPONSES TO COMMENTS ON THE DRAFT EIS/EIR (continued)

State Clearinghouse Number: 2009031043

RESPONSES TO COMMENTS ON THE DRAFT EIS/EIR

Introduction

The Regional Connector Transit Corridor Project Draft EIS/EIR was made available to identified stakeholders, agencies, and the general public for review and comment for a 45-day review period from September 3, 2010 through October 18, 2010. During the public review period, Metro held two public hearings to receive oral and written testimony on the Draft EIS/EIR from the general public.

Volumes F-2 and F-3 of this Final EIS/EIR contain copies of all written comments and public hearing transcripts, and provide written responses to all comments received on the Draft EIS/EIR. A total of 195 comment letters were received during the public review period, including written materials submitted at the two public hearings. Comments were also submitted in the form of oral testimony at those hearings. A total of 44 public testimonies were recorded at the public hearings. Overall, a total of 1,030 individual comments were received on the Regional Connector Transit Corridor Project Draft EIS/EIR.

The format for the responses to comments presents each comment letter/hearing transcript, bracketed into separate comments, followed by corresponding responses to each individual comment of that comment letter/hearing transcript. The comment letters/hearing transcripts and responses are organized and grouped into the following categories based on the affiliation of the commenter as follows:

Letter/Speaker ID Prefix	Description
AF	Federal Agency
AL	Local Agency
AR	Regional Agency
AS	State Agency
BU	Businesses and Business Groups
CN	Community Groups and Non-Profit Organizations
PC	Public Comment
PHA	The first public hearing held on September 28, 2010
PHB	The second public hearing held on October 4, 2010

To assist the reader's review and use of the responses to comments, two indices that provide the commenter name, affiliation, and comment letter/speaker identification designator (e.g., PC1) for each comment letter are provided below. The first index lists all the comment letters by comment letter/speaker identification designator and the second lists all of the comment letters alphabetically by commenter's last name.

Index by Comment Letter/Speaker Identification Designator

Subject: Little Tokyo station name

I hear that the MTA has recently released the Draft EIR for the Regional Connector. Good! I am glad to hear that this vital project is moving forward. 1

However, I am concerned that recent documents show the Little Tokyo train station does not have the name Little Tokyo.
The new station at 2nd and Central will clearly be in the very heart of Little Tokyo. It is not on the border of Little Tokyo and the Arts District like the existing Little Tokyo/Arts District station.
I would hope that if the existing Little Tokyo station is destroyed in the process of building the new station, that the new station be given the name "Little Tokyo." 2
The Little Tokyo community has fought hard to have the all-underground option; and they have fought hard to preserve the community of Little Tokyo as a Japanese-American community. They deserve recognition for their efforts.

I am also curious to know where the station entrances will be. I would hope that at least one entrance would face north towards the Japanese American National Museum. 3
Little Tokyo deserves a Little Tokyo station. Thank you,

- James Fujita

Responses to Comments from Fujita, James

Response to Comment PC1-1

Comment acknowledged.

Response to Comment PC1-2

Metro will undergo a formal station naming process that includes community participation. The stations are referred to in the EIS/EIR by intersection so as to be as descriptive as possible about their locations, but these will not necessarily become the actual station names.

Response to Comment PC1-3

Station entrances are shown in the station plans included in Final EIS/EIR Appendix 1, Updated Locally Preferred Alternative Drawings.

September 3, 2010 (*updated October 17. 2010*)

To the Regional Connector Project Team,

I support the Underground AND Fully Underground options for the Regional Connector. Both options are cost-effective, both will enable Metro to acquire FTA New Starts funding and I support leaving the 5th/Flower station for the FEIR as a *design option* to enable Metro staff to come up with either new suggested funding strategies OR urban design strategies to cover this gap. 1

Funding Strategy

- DEIR assumes only a 50% FTA New Starts match, maybe Metro could assume a 60% Federal funding match as this project is rated High in Cost-effectiveness one of the few projects that is rated 'High' per the FTA rules. 2
- DEIR makes no mention or use of Local Prop A and C funding. The Regional Connector could learn from the Eastside Gold Line and get creative in the funding to use some Prop A and C funds to fund the non-subway components of the project like the Pedestrian bridge that would link the Upper Grand Avenue to the Bunker Hill station, or the 1st St. widening to build the new portal, the re-striping and repaving of Flower street from 3rd to 5th Street (this could also work as an urban design component in lieu of a 5th/Flower Station), the property take of the DWP Maintenance site to build the new portal incline as a portion of it is not fully underground or in open-cut therefore going around the Prop. A and C ban on subway funding. 3
- Have the property owners chip in for the cost of the station at 5th/Flower. 4

Urban Design Strategy

The key to making the urban design strategy work for the Regional Connector is to leave the 5th/Flower station into the DEIR as a design option; much like it is done with other recent DEIR's such as Crenshaw Corridor and Expo Phase 2. 5

- *It enables the project team to work with stakeholders to look at pedestrian and streetscape improvements that can be incorporated into tying the 5th/Flower area to the Bunker Hill Station.*
- *Combining the Bunker Hill and Financial District stations into a 'super-station' that would have additional entrances around 3rd/Flower or 4th/Flower to tie into the main platform.* 6

Personally, if there is a station that should be considered for removal it is the 2nd/Broadway one as it appears to be the weakest of the 4 stations. With the Broadway Streetcar connecting at Bunker Hill, Financial District AND Convention Center which would also serve the Regional Connector, this portion can be served by the streetcar and actually strengthen the utility of the streetcar by linking this at other areas. 7

Thank you for your time and continued efforts on this essential project for the Greater L.A. region and keep up the great work. 8

Sincerely,
Jerard Wright

Responses to Comments from Wright, Jerard

Response to Comment PC2-1

Support for the Underground Emphasis LRT Alternative and Fully Underground LRT Alternative is noted. The Metro Board of Directors voted on October 28, 2010 to designate the Fully Underground LRT Alternative without the Flower/5th/4th Street station as the Locally Preferred Alternative. The deletion of the station was done in an effort to reduce the cost of the project while still meeting the project's purpose and need. An enhanced pedestrian walkway connecting the 4th/Flower Streets area to the existing 7th Street/Metro Center Station would be constructed on Flower Street to improve access to the Financial District. The design of the Locally Preferred Alternative would not preclude a station at 5th and Flower Streets from being built as a possible future, separate project.

Response to Comment PC2-2

In response to the increased cost-effectiveness of the three-station Locally Preferred Alternative over the four-station Fully Underground LRT Alternative, Metro is requesting a 60 percent federal funding match. The Federal Transit Administration New Starts Cost-Effectiveness Index for the proposed project, as of the publication of the Draft EIS/EIR, was $13.68 (a "medium-high" rating). Refer to Chapter 6, Cost and Performance Considerations and Summary Comparison of Alternatives, of this Final EIR/EIR.

Response to Comment PC2-3

Metro is actively seeking ways to reduce the costs of the project, and is considering all available funding sources. Proposition A and C funds are largely unusable for the fully underground Regional Connector due to the voter-approved Metropolitan Transportation Authority Reform and Accountability Act of 1998.

Response to Comment PC2-4

After the October 28, 2010 meeting, the Metro Board of Directors directed staff to meet with the Financial District stakeholders to discuss options for privately funding the Flower/5th/4th Street station, but no funding sources were identified. However, the design of the Locally Preferred Alternative would not preclude a station at 5th and Flower Streets from being built as a possible future, separate project.

Response to Comment PC2-5

Support for the Flower/5th/4th Street station is noted. The Metro Board of Directors voted on October 28, 2010 to designate the Fully Underground LRT Alternative without the Flower/5th/4th Street station as the Locally Preferred Alternative. The deletion of the station was done in an effort to reduce the cost of the project while still meeting the project's purpose and need. An enhanced pedestrian walkway connecting the 4th/Flower Streets area to the existing 7th Street/Metro Center Station would be constructed on Flower Street to improve access to the Financial District. The design of the Locally Preferred Alternative would not preclude a station at 5th and Flower Streets from being built as a possible future, separate project.

Response to Comment PC2-6

The Metro Board of Directors voted on October 28, 2010 to designate the Fully Underground LRT Alternative without the Flower/5th/4th Street station as the Locally Preferred Alternative. The station at 2nd and Hope Streets is included in the Locally Preferred Alternative. An enhanced pedestrian walkway connecting the 4th/Flower Streets area to the existing 7th Street/Metro Center Station would be constructed on Flower Street to improve access to the Financial District. The design of the Locally Preferred Alternative would not preclude a station at 5th and Flower Streets from being built as a possible future, separate project.

Response to Comment PC2-7

Preference for removal of the 2nd/Broadway station instead of the Flower/5th/4th Street station is noted. The Metro Board of Directors voted on October 28, 2010 to designate the Fully Underground LRT Alternative without the Flower/5th/4th Street station as the Locally Preferred Alternative.

Response to Comment PC2-8

Thank you for your comment.

Subject: Thank You, But...

Hello,

First I just want to say how much I (one member of the public) appreciate all the hard work that went into the DEIR (and for that matter, the Westside Extension DEIR too). This is a great start to an excellent transit facility for the people of Los Angeles. 1

Having said that, I am not happy about the new names given to the stations. The names should reflect a sense of place. The new names are unambiguous but cold, technically correct but unmemorable. They add nothing to the cultural landscape of Downtown. Not to mention the fact that replacing the "Little Tokyo" name with 2nd/Central is an insult to the community which has put up with so much related to rail construction.

I recommend using the following names:

- **Central Library**
- **Bunker Hill** and/ or **Disney Hall**
- **Broadway**
- **Little Tokyo**

2

Again, thank you for your time, and have a great (long) weekend.

Thank You,

Joel Covarrubias

This is my formal comment on Draft EIS/EIR.

I strongly support the Fully Underground LRT Alternative. This alternative has the highest ridership potential, the shortest travel times, the greatest connectivity of the rail network, and low operating budget. So, it satisfies all the criteria of a successful rail transit project. As for its high capital cost - well, we are building the future of our region, and we cannot really afford to build it cheaply and badly. We build it once, but we will have to live with it forever. Therefore, Fully Underground LRT Alternative should be chosen as the locally preferred alternative. 1

Sincerely yours,
Yuri O. Popov, Ph.D.

To Whom it May Concern:

I am very pleased with the progress and planning of the Regional Connector project. As a former resident of the San Gabriel Valley, this project is in dire need. I consistently take the metro to LAX, so originating from the gold line I transfer three times to get there. Each transfer, I typically wait five to ten minutes for the next train and that adds up to an additional 30 minutes. The connector will decrease my transfers to one and decrease the travel time by 20 minutes, so needless to say, I'm very ecstatic of the time I will save. There are a number of other occasions where such transfers are necessary, like heading to staples center or downtown. 1

I reviewed the DEIR. I'd like to say that both the underground option and the completely underground option are terrific and preferred over the other options. 2

Is Metro aware of the proposed land swap for the Federal courthouse parcel and the Parker Center Parcel. I bring this up because of the location of the Federal courthouse on Hill and 2nd. It was always a glaring omission to me that there wasn't a transfer hub at the Civic Center station for the regional connector and the red/purple lines. Building an additional station only one block from the existing civic center station seems illogical, but now with the possible switch of these two parcels, there is an incredible opportunity to expand the Civic Center station to this parcel and creating an underground transfer hub. The station for the regional connector would be located on 2nd between Hill and Broadway and an underground transfer plaza can span over to 1st and Hill, bypassing any pedestrian crossing. Right now, the proposed station in the completely underground option is on 2nd between Broadway and Spring, creating a great obstacle for metro riders to transfer in this area. An entrance for this transfer hub that I am proposing will still be at 2nd and Broadway servicing this LA Times area and connecting it to the Civic Center station as well. Without this proposed Civic Center hub the alternative is to transfer at Union station or 7th St and that is fine for commuter travel and long distance travel, but for those traveling within downtown, the more options the better, as is the case with any transit system. 3
I hope it is not too late for Metro to consider this proposal in it's planning.

Thank You,
Carlos Tower

Response to Comment PC5-3

Metro is aware of the proposed project, as indicated in Table 4.19-6 of the Draft EIS/EIR and Section 4.19, Cumulative Impacts, of this Final EIS/EIR. The primary transfer points between the light rail system and the heavy rail system would occur at Union Station and 7th Street/Metro Center Station. An additional transfer point at Civic Center Station would be redundant, though the station would be approximately one to one-and-a-half blocks away, which is within walking distance. Metro is anticipating connections to other transit routes, such as the proposed downtown streetcar, at the 2nd/Broadway station.

I urge you to keep the name Little Tokyo for that station as well as look at changing station names across the MetroRail system to more recognizable neighborhood/landmark names.

For example, no one knows where Memorial Park is, but almost everyone knows Old Town Pasadena, so why not name it that. The same applies for 2nd/Central and Little Tokyo. For the all important tourist industry this is much more important.

1

Thank you...

Though I am greatly looking forward to the opening of the regional connector, I am a little confused as I was under the impression that the routes connected would be Culver City to Pasadena and Long Beach to East Los Angeles. Why was there this change? I believe that these routes would be much more effective based on the passenger reports that I have reviewed. 1

I look forward to hearing your answers and comments.

Best,

--

Subject: Regional Connector Underground Option Comments

My comments about the Draft Environmental Impact Statement for the Regional Connector:

I support the regional connector and feel it will finally connect downtowns 2 (soon to be 3) light rail lines into one cohesive system. In addition the new downtown stations will enhance my use of the downtown. I support the fully underground option, I feel it will best handle the traffic flow and cause the least delays. I would use all of new stations proposed, although mostly the little Tokyo station since I visit the area often. I am wondering what would happen to the current little Tokyo station, if it would be demolished or converted into a small park. I think the later would serve the area better. The new station and 2nd and Central should be called the "Little Tokyo" station, not 2nd and Central. It wont be easy to build, but it will be worth it for the future of a cleaner Los Angeles. Easier access to a more fully connect rail system will serve as an excellent alternative the horrible experience of driving, which I tend to avoid as much as I can. 1 2 3 4 5

Now that Metro is finally able to get Los Angeles back "on track" after the unnecessary hiatus of rail traffic for the past several decades, the planning for "through traffic" seems to be dragging Metro down instead of giving it a boost. Case in point, the Regional Connector should have been part of the original design for the Blue and Gold (and now the Expo) Lines in the first place. We found ourselves transferring from one to another, wasting time and energy and costing more for each transfer. The time has come to give the public the entire transit plan, including rail access into (not just near) LAX airport and to once and for all create a "Master Plan" that can be adhered to and one that will make sense for all communities and transit patrons. By all means GO with the Regional Connector but look at all the upcoming plans for the Red and Purple Lines and don't make the same mistakes over again. The Orange Line will someday become a rail line, and that too, should be taken into account for propert connectability with existing lines and yet-to-be proposed lines. Congratulations on moving forward, just make sure it's going to be beneficial to all. Morley Helfand.(Arcadia, CA)

1

PC9

Responses to Comments from Helfand, Morley

Response to Comment PC9-1

Metro's 2009 Long Range Transportation Plan (LRTP) serves as the long-term master plan for the transit system. The Regional Connector is being planned in a way that is consistent with other corridor projects identified in the LRTP.

Hello,

I live in Santa Monica and work in downtown Los Angeles. I would like to request that any Regional Connector plan include bike paths and/or spacious and well marked bike lanes. I currently commute by a bike only a few times each month. I would ride more if there were safer alternatives to what is now available. Additionally I would prefer to ride rather than take any metro option, especially when the weather outside is nice, which it usually is. 1

Thank you,

Aaron Furlong

PC10

Responses to Comments from Furlong, Aaron

Response to Comment PC10-1

The Regional Connector would include bicycle lockers and racks at stations where feasible to facilitate bicycle use, as noted in Section 3.3.5.2.4 of the Draft EIS/EIR and this Final EIS/EIR. Since the alignment is entirely underground, few alterations to existing streets would occur. The Regional Connector does not include any new bike lanes along the alignment, but would not preclude the City of Los Angeles from installing bike lanes near the alignment in the future.

Subject: Regional Connector

I am a resident at the Higgins building on 2nd Street between Spring Street and Main Street. 1
I support the city's effort to build the regional connector, however I am against the At-Grade Emphaisi LRT and the Underground Emphasis LRT.

I support the fully underground LRT
The reason for my support of this option is that unlike the other alternatives the urban environment and fabric around the Higgins, the LA Times, the police building, the Caltrans building, the surrounding streets and neighborhood, and Little Tokio will remain as they are. The at grade option will rupture the urban fabric, splitting the neighborhood into 2 pieces at either side of the tracks. 2
Another concern I have is the noise of having a surface train running at street level below my window. 3
A third concern is the modification (increased width or removal of vehicular circulation) of 2nd street and the historical 2nd street tunnel. 4
A fourth concern is the effect that a surface rail track will have on vehicular circulation and traffic in the area. 5

I support the Fully Underground LRT
I oppose the At-Grade Emphasis LRT
I oppose tyhe Underground Emphasis LRT 6

Sincerely,

Jose Herrasti
Resident at 108 W 2nd Street (Higgins Building)

PC12

Responses to Comments from Herrasti, Jose

Response to Comment PC12-1

Comment acknowledged.

Response to Comment PC12-2

Comment acknowledged. The Fully Underground LRT Alternative has been designated as the Locally Preferred Alternative.

Response to Comment PC12-3

Noise impacts associated with operation of the At-Grade Emphasis LRT Alternative were analyzed in Section 4.7, Noise and Vibration, of the Draft EIS/EIR and this Final EIS/EIR, which included analysis of noise generated from LRT vehicle pass-by, and were determined to be less than significant. Nonetheless, the Fully Underground LRT Alternative, which was designated by the Metro Board of Directors on October 28, 2010 as the Locally Preferred Alternative, would be below-grade when traveling past the Higgins Building. Therefore, noise generated from LRT vehicle pass-by would not affect residents of the Higgins Building.

Response to Comment PC12-4

After implementation of the mitigation measures listed in the Mitigation Monitoring and Reporting Program for the Locally Preferred Alternative (Chapter 8) of this Final EIS/EIR, the Locally Preferred Alternative would not cause modifications or adverse impacts to the 2nd Street Tunnel.

Response to Comment PC12-5

Comment acknowledged. The Metro Board of Directors voted on October 28, 2010 to designate the Fully Underground LRT Alternative as the Locally Preferred Alternative. The Locally Preferred Alternative would operate underground. Therefore, the concern stated in this comment regarding operation of an at-grade LRT system is not an issue under the Locally Preferred Alternative.

Response to Comment PC12-6

Thank you for your comment. It is noted that the commenter supports the Fully Underground LRT Alternative and opposes the At-Grade Emphasis LRT and Underground Emphasis LRT Alternatives. The Metro Board of Directors voted on October 28, 2010 to designate the Fully Underground LRT Alternative as the Locally Preferred Alternative.

It would be fantastic, to have a Metro connection to Santa Monica from Downtown, especially an underground one.

I am really looking forward to hear more about this project. 1

Kindly,
Rachel

From: george.magdaleno@nmfn.com
To: Ginny Brideau <ginny@therobertgroup.com>

Hello Ginny,

I was in the audience for the Downtown Los Angeles Neighborhood Council Meeting. I live and work in downtown and use the metro every week about 4 to 5 time to get to and from Pasadena and Hollywood.

I often rather walk to the Little Tokyo Station rather than use the Pershing Square to connect to Gold Line, so I can see the appeal of a Metro Connector.

I would very much like to participate in the dialogue and planning you have for this project.

Please keep my information handy. Look forward to speaking with you personally.

Please include this comment as part of the public commentary for the environmental reports on the project.

I understand that funding may be limited, but the 5th + Flower station is extremely important and would improve ridership and congestion in the Financial District. Please don't let this station be removed due to funding constraints. It's even more essential (serves a much larger ridership) than a 2nd/Hope station would. 1

Thank you.

PC18

Responses to Comments from Alossi, Rich

Response to Comment PC18-1

The Metro Board of Directors voted on October 28, 2010 to designate the Fully Underground LRT Alternative without the Flower/5th/4th Street station as the Locally Preferred Alternative. This deletion of the station was done in an effort to reduce the costs of the project while still meeting the project's purpose and need. An enhanced pedestrian walkway connecting the 4th/Flower Streets area to the existing 7th Street/Metro Center Station would be constructed on Flower Street to improve access to the Financial District. Ridership modeling indicates that deletion of the Flower/5th/4th Street station would result in minimal ridership losses because most riders would use the 2nd/Hope Street station or 7th Street/Metro Center Station, which would service the Financial District. However, the design of the Locally Preferred Alternative would not preclude a station at 5th and Flower Streets from being built as a possible future, separate project.

Subject: Little Tokyo Station / Regional Connector

I am writing to ask the MTA to name the station to be built at Second and Central as part of the regional connector as the "Little Tokyo" station. The station is in the heart of one of Los Angeles true historic districts, and provides direct access to the local museums, monuments and businesses of Little Tokyo. To do otherwise is to fail to acknowledge the cultural importance of this neighborhood and the important contributions of the generations of Japanese Americans who have lived and worked here, and who still do. 1

Thanks for your consideration.

Responses to Comments from Egdal, David

Response to Comment PC19-1

Metro will undergo a formal station naming process that includes community participation. The stations are referred to in the EIS/EIR by intersection so as to be as descriptive as possible about their locations, but these will not necessarily become the actual station names.

To: Regional Connector
Subject: Input

I am in favor of the fully underground LRT option.

Downtown is already transit heavy with pedestrians, busses, and cars so by having any of the route at grade would severely and negatively impact the former. 1

I am also in favor of having the Flower and 4th/5th Street station because it will allow riders greater mobility around the downtown area and not just to the downtown area. My example of success with this model can be seen in San Francisco's BART. Though it goes a great distance in covering ground, once it is downtown, it makes many local stops. This encourages more people to ride as they can go more directly from the outskirts to the center while providing local transit within the area. The opposite would be Los Angeles' Union Station as it only provides one station that is not close to many of the businesses, housing, and other desirable locations in the downtown area. Eliminating this station would be a mistake as it would further congest other surrounding stations while providing less flexibility for both long and short distance ridership. 2

In regards to the 2nd Street and Hope station, it is imperative that a functional escalator and elevator system are built into its design to allow for easy access to the top of Bunker Hill and such landmark destinations as the Disney, Chandler and Ahmanson, MOCA, and other businesses that would otherwise require an extremely steep or elongated route to get to on foot. Ensuring easy accessibility to the top of the hill must be a priority that is met otherwise the station is likely to only serve a much more limited crowd walking west to Flower and Figueroa and the few that want the exercise of climbing a hill. 3

Though not an essential, I believe having extended underground connections to the eatery/mall on 6th and Flower would also provide both convenience for rider but also greater signage for using the new train. Employees of the local businesses and others that go to the underground shopping area are a great audience to using transit as they have already gone "undergound" into an area that they are familiar with. It also provides a more hospitable environment with livelihood by using multi-modal and multi-use tactics for transit and retail development as seen in such cities like New York, Montreal, London, and 4

Tokyo. 4 cont'd

Finally, I believe that that Culver City to Pasadena and East Los Angeles to Long Beach should be the designated routes. However, the density and direction of people's living and working locations does fluctuate. We can see that freeways such as the 110 heading through downtown are in gridlock in part due to its design being too rigidly geared toward the specific directional flow of traffic occurring when it was built. Now, traffic is moving from different directions and it will take a lot of construction to correct this. Thus, I urge that there be greater options for flexibility in the rail structure for the regional connector to allow for such inevitable things as change. 5

As a downtown resident I do believe that these are the most important issues, unless I have missed any, that could negatively impact the success of the Regional Connector. 6

PC20

Responses to Comments from Kassimir, Spencer V.

Response to Comment PC20-1

Comment acknowledged. Support for the Fully Underground LRT Alternative is noted. The Metro Board of Directors voted on October 28, 2010 to designate the Fully Underground LRT Alternative without the Flower/5th/4th Street station as the Locally Preferred Alternative.

Response to Comment PC20-2

Support for the Flower/5th/4th Street station is noted. The Metro Board of Directors voted on October 28, 2010 to designate the Fully Underground LRT Alternative without the Flower/5th/4th Street station as the Locally Preferred Alternative. The deletion of the station was done in an effort to reduce the cost of the project while still meeting the project's purpose and need. An enhanced pedestrian walkway connecting the 4th/Flower Streets area to the existing 7th Street/Metro Center Station would be constructed on Flower Street to improve access to the Financial District. Metro understands the importance of serving the Financial District and believes that the Locally Preferred Alternative still meets the purpose and need of the project despite the station deletion. Deletion of the Flower/5th/4th Street station would result in minimal ridership losses because most riders would use the 2nd/Hope Street station or 7th Street/Metro Center Station, which would service the Financial District. After the October 28, 2010 meeting, the Metro Board of Directors directed staff to meet with the Financial District stakeholders to discuss options for privately funding the Flower/5th/4th Street station, but no funding sources were identified. However, the design of the Locally Preferred Alternative would not preclude a station at 5th and Flower Streets from being built as a possible future, separate project.

Response to Comment PC20-3

Comment acknowledged. The Broad Art Foundation Museum, currently under construction, is projected to include a plaza above General Thaddeus Kosciuszko Way connecting to Upper Grande Avenue. In order to provide access from the 2nd/Hope Street station to Upper Grand Avenue, an elevator would be built as part of the Locally Preferred Alternative from the station entrance to the plaza if one is not already provided. If the plaza is not built as part of the Broad Art Foundation Museum, a pedestrian connection (such as a pedestrian bridge) would be built as part of the Locally Preferred Alternative from the elevator to Upper Grand Avenue. The pedestrian bridge, if built as part of the Broad Art Foundation Museum or the Locally Preferred Alternative, would be ADA compliant and elevator access, built as part of the Locally Preferred Alternative, would also be provided to the station.

Response to Comment PC20-4

Metro has met with the owners of the underground shopping center at 6th and Flower Streets, and they indicated that they would prefer not to have a station entrance into their shopping area.

Response to Comment PC20-5

Preference for Culver City-Pasadena and Long Beach-East Los Angeles routes is noted. The Locally Preferred Alternative includes Long Beach-Pasadena (eventually Montclair) and East Los Angeles-Culver City (eventually Santa Monica) routes. However, the track configuration would

allow Culver City-Pasadena and Long Beach-East Los Angeles train movements to occur when necessary.

Response to Comment PC20-6

Comment acknowledged. Please refer to Responses to Comments PC20-1 through PC20-5, above, for detailed responses regarding concerns raised by the commenter.

Position Statement on the Regional Connector Transit Corridor DEIS/DEIR
(Response to Metro Staff On September 28, 2010, But No Later Than October 10, 2010)

Date: September 28, 2010

Individual ~~Company~~ Name: Carol Donato

Address: P.O. Box 220025 - Newhall, CA 91322

Telephone/E-Mail

Name:

☐ Owner ☐ Employee ☐ Manager ☒ Other: Little Tokyo Business Partner

Metro Staff:

With respect to the Regional Connector Transit Corridor Project, we are in support of the ***Little Tokyo Business Association*** and the ***Little Tokyo Business Improvement District*** current position that:

1. ***Locally Preferred Alternative:*** Metros Staff's current recommended ***Fully Underground LRT Alternative*** as the ***locally preferred alternative*** is premature and this recommendation did not adequately seek out the input from the business sector. Therefore, we are cannot support the ***Fully Underground LRT Alternative,*** until the ***Little Tokyo Business Improvement District*** has completed a survey of its membership of all the build alternatives, construction impacts, mitigation issues and solutions, which require implementation and documentation in the ***Final Environmental Impact Statement and Environmental Impact Report.*** 1

2. ***Construction Phase Mitigations:*** The current DEIS/DEIR has identified substantial construction related impacts affecting our business community. Among the key concerns which has not been adequately addressed in the current DEIS/DEIR, but is not limited too, is as follows: 2

   A. ***Preservation of Japanese Business Influence and Culture:*** Little Tokyo is a commercial district, which has served as a ***Japanese Community Center*** for decades. Little Tokyo has a large number of Japanese restaurants and other retail stores. Japanese businesses are particularly concentrated around Japanese Village Plaza on the block bounded by 1st Street, Central Avenue, 2nd Street, and San Pedro Street. The current DEIS/DEIR has identified serious construction impacts under all the build alternatives currently considered by the Regional Connector Project. Serious and real discussion needs to take place with Metro Staff and the Little Tokyo business community to preserve the ***Japanese business influence and culture.***

   B. ***Business Interruption:*** The current DEIS/DEIR has identified numerous construction impacts that will affect the conduct of business and impede access to the business concerns. This will result in serious economic impacts to the Little Tokyo business community. During the 3

course of construction, every effort shall be made to minimize adverse impacts, which businesses, tenants, property owners, and valued visitors/customers may encounter that prevents them from conducting reasonable business and personal activities within the Little Tokyo Community. Additional funding shall be made available for those businesses, tenants, or property owners, whose business endeavors are adversely impacted during the course of construction of the Regional Connector Project. A special business interruption committee shall be established, whose membership shall include Little Tokyo businesses, tenants, and property owners, along with those governmental agencies, having jurisdiction to make policy to resolve issues arising from adverse business interruptions during the course of construction of the Regional Connector Project. 3

C. ***Replace of On-Street and Off-Street Parking:*** The current DEIS/DEIR has identified serious construction impacts that will affect traffic and parking within the Little Tokyo community under all the build alternatives. Construction of the Regional Corridor Project will result in the loss of on-street parking and reduction in travel lanes. Lane closures during construction will result in temporary removal of existing on-street spaces and loading stalls. Certain construction requirements will require temporary sidewalk detours, which will impede pedestrian flow. Numerous Little Tokyo street level businesses relay upon the on-street parking spaces for their patrons and street- level pedestrian flow. With the traffic congestion and on-street parking losses, the patrons to these street-level businesses will seriously be economically impacted by customers seeking alternative communities for similar products and services. Therefore, we support the replacement of all off-street parking spaces loss through eminent domain shall be replaced. Further, all on-street and off-street parking spaces taken away during the course of construction shall be replaced. 4

The Regional Connector Transit Corridor is a major project. Construction of this project will affect current businesses and property owners with serious economic impacts, which in turn will affect the future of the Little Tokyo Community. 5

Respectfully yours,

cc: Los Angeles County Metropolitan Transit Authority
Delores Roybal Saltarrelli, Project Manager
One Gateway Plaza, 99-22-2

PC22

Responses to Comments from Donato, Carol

Response to Comment PC22-1

Metro's outreach to and involvement with the Little Tokyo community, including the business community, has been extensive. For a more detailed description of this outreach effort, please refer to Chapter 7, Public and Agency Outreach, of this Final EIS/EIR.

Metro held public meetings during the Draft EIS/EIR process, meetings with the Little Tokyo Working Group and individual stakeholders in the Little Tokyo neighborhood, hired an independent consultant for the Little Tokyo Community Council, and performed outreach activities to gather input that ultimately led to the creation of the Fully Underground LRT Alternative. The results of the Little Tokyo Business Improvement District's survey poll on the Regional Connector Transit Corridor project are provided in Comment Letter BU20, above. Metro will implement the mitigation measures in the Mitigation Monitoring and Reporting Program for the Locally Preferred Alternative (Chapter 8) of this Final EIS/EIR, including those suggested by the Little Tokyo community to the extent feasible, in order to minimize impacts to businesses.

Response to Comment PC22-2

Metro recognizes the significance of Little Tokyo to Japanese Americans nationwide, and expressed the community's importance in Section 4.17.2 of the Draft EIS/EIR and this Final EIS/EIR. Metro acknowledges the disproportionate adverse impacts that Regional Connector construction would have in Little Tokyo, and addresses them in the Mitigation Monitoring and Reporting Program for the Locally Preferred Alternative (Chapter 8) of this Final EIS/EIR. Metro has been working closely with the Little Tokyo community since the outset of the Alternatives Analysis process in October 2007. Metro staff have performed extensive outreach measures, as documented in Chapter 7, Public and Agency Outreach, of the Draft EIS/EIR and this Final EIS/EIR, including numerous public meetings, Japanese and Korean language interpretations, and door-to-door visits with business owners to provide information about the project and gather input. Metro will enact the measures listed in the Mitigation Monitoring and Reporting Program for the Locally Preferred Alternative to minimize impacts to businesses, and will coordinate activities with the community throughout the construction process. As described in Chapter 2, Alternatives Considered, and Section 4.18, Construction Impacts, of this Final EIS/EIR, since publication of the Draft EIS/EIR, alignment refinements have been made to reduce construction impacts in Little Tokyo, reduce the amount of cut and cover activities, and reduce the extent of acquisitions needed on the block bounded by 1st Street, Central Avenue, 2nd Street, and Alameda Street. These refinements would reduce construction impacts near the Japanese Village Plaza by eliminating the need for cut and cover activities on 2nd Street in Little Tokyo. It is Metro's goal to help preserve the Little Tokyo community and its businesses during construction. Metro will continue to meet with the community for the duration of the project.

Response to Comment PC22-3

It is Metro's goal to minimize adverse impacts to the Little Tokyo community, including impacts to businesses. Metro will implement the mitigation measures proposed by the Little Tokyo Community Council and Little Tokyo Business Improvement District/Little Tokyo Business Association regarding business interruption shown in the Mitigation Monitoring and Reporting

Program (Chapter 8) of this Final EIS/EIR. Metro will work with a business interruption committee to serve all businesses affected by Regional Connector construction.

Response to Comment PC22-4

Metro understands the impacts that construction would have in the Little Tokyo community, and will work with the community to minimize impacts to businesses. During construction, Metro will minimize lane and sidewalk closures, and will provide adequate detours to maintain pedestrian flow. Temporary replacement parking will be provided during construction as needed to offset the impact of on-street and off-street parking removal. As part of temporary replacement parking efforts, Metro will provide two acres of land on the Mangrove property, located at the northeast corner of 1st and Alameda Streets, for the purposes of providing supplemental parking services, such as valet parking services during construction. Please refer to the Transportation Impacts and Environmental Justice sections of Chapter 8, Mitigation Monitoring and Reporting Program for the Locally Preferred Alternative, for more information regarding construction parking mitigation measures.

Response to Comment PC22-5

Comment acknowledged. Please refer to Responses to Comments PC22-1 through PC22-4, above, for detailed responses to concerns raised by the commenter about project-related construction impacts to the Little Tokyo community. In addition, construction and economic impacts associated with the project were analyzed in Sections 4.14, Economic and Fiscal Impacts, and 4.18, Construction Impacts, of the Draft EIS/EIR and this Final EIS/EIR.

I work in Little Tokyo, on Judge John Aiso St. between First and Temple. As someone who will be here during the construction of the project, Monday - Friday, I support the locally-preferred, fully underground alternative for the Metro Regional Connector. The other build alternatives would pose a threat to the future of the Little Tokyo community, and are not acceptable. 1

In addition, I believe it's important that Metro provide a safety net for the small businesses, nonprofit arts centers, and Little Tokyo community/cultural events affected by construction. Any construction will have a huge negative impact on these businesses and organizations that give this historic community its unique culture and identity.

The Metro Regional Connector will create seamless travel between different neighborhoods in Los Angeles, but Metro must make sure that it does not destroy any communities in the process. 2

Response to Comment PC25-1

Thank you for your comment. Support for the Fully Underground LRT Alternative is noted. The Metro Board of Directors voted on October 28, 2010 to designate the Fully Underground LRT Alternative as the Locally Preferred Alternative.

Response to Comment PC25-2

Metro intends to work with the Little Tokyo community to support businesses, non-profit organizations, and community/cultural events throughout the construction phase of the project. It is Metro's goal to minimize the adverse impacts of Regional Connector construction, and to support community culture and identity. Targeted marketing efforts and other technical assistance are included as confirmed mitigation measures in the Mitigation Monitoring and Reporting Program for the Locally Preferred Alternative (Chapter 8) of this Final EIS/EIR. Metro believes that, once completed, the Regional Connector will be beneficial for the Little Tokyo community.

Metro Board and Staff,

The Regional Connector is an absolutely critical project. Please build it as quickly and safely as possible. 1

Metro staff has done a fine job identifying possible alternatives, including routing and station options, as well as involving the public. What follows are my thoughts about the project, starting with the highest priority items. 2

- **Preferred Alternative.** Please build the **Fully Underground Alternative**. Despite the higher cost, this alternative will result in a faster and more reliable line for all riders, with fewer impacts to the Downtown community.

- **5th/Flower Station.** Please **do not remove the station at 5th/Flower**. Once all the lines are running and connected, 7th/Metro Center station is going to be an increasingly busy transfer station. By contrast, the 5th/Flower station will function as a "destination station" rather than a "transfer station". Thousands of people will enter and exit the system using 5th/Flower, reducing pressure on 7th/Metro. The new station will be more central to the Financial District, and will serve workers in City West and lower Bunker Hill as well. 3

- **7th/Metro North Entrance.** In the event that you decide to drop the 5th/Flower station, please study **a new north entrance for 7th/Metro Center station**. I believe this could be done by extending the mezzanine north under Flower Street to an entrance at 6th/Flower. 4

- **Station Names.** Please **name the stations after the neighborhoods served**, rather than after intersections. I suggest the following names: 5

  - Station 1: **Little Tokyo**
  - Station 2: **Broadway** or **Historic Core** or **Old Bank District**
  - Station 3: **Bunker Hill**
  - Station 4: **Financial District** or **Central Library**

- **Three-Track Tunnel Under Flower.** Plans call for a cut-and-cover tunnel under Flower Street. Please build this tunnel **wide enough to accommodate three tracks over its entire length**. I've seen the plans in the DEIR that call for a pocket track south of Bunker Hill station. Designing the tunnel for three tracks now will give Metro the space to accommodate future trackwork needs, such as a second pocket track north of 7th/Metro, or a passing track along the entire length. At least study how much the extra tunnel width would cost. It would be very bad if Metro did not allow for future needs, and then later had to go back and widen the tunnel, which would be very expensive and create new construction impacts. 6

- **All stations.** Please build every station with **at least two entrances, and if possible, three**. I understand the construction and cost issues involved with building extra entrances, but we are going to live with this subway for decades, so it's imperative the stations be done right. An excellent example of a good station is Pershing Square, with entrances on three different street corners, up to a block away from each other. Wilshire/Western, on the other hand, is an example of a station with only one (massive) portal entrance. No entrance on the south side of Wilshire, and none on the west side of Western. Entrances can't possibly be that hard or costly to build, right? 7

Thank You,

Joel Covarrubias
3610 Walnut Avenue
Long Beach, CA 90807

Responses to Comments from Covarrubias, Joel

Response to Comment PC26-1

Thank you for your comment. Support for the project is noted.

Response to Comment PC26-2

Thank you for your comment. Support for the Fully Underground LRT Alternative is noted. The Metro Board of Directors voted on October 28, 2010 to designate the Fully Underground LRT Alternative as the Locally Preferred Alternative.

Response to Comment PC26-3

Support for the Flower/5th/4th Street station is noted. The Metro Board of Directors voted on October 28, 2010 to designate the Fully Underground LRT Alternative without the Flower/5th/4th Street station as the Locally Preferred Alternative. The deletion of the station was done in an effort to reduce the cost of the project while still meeting the project's purpose and need. An enhanced pedestrian walkway connecting the 4th/Flower Streets area to the existing 7th Street/Metro Center Station would be constructed on Flower Street to improve access to the Financial District. Metro understands the importance of serving the Financial District and believes that the Locally Preferred Alternative still meets the purpose and need of the project despite the station deletion. Deletion of the Flower/5th/4th Street station would result in minimal ridership losses because most riders would use the 2nd/Hope Street station or 7th Street/Metro Center Station, which would service the Financial District. After the October 28, 2010 meeting, the Metro Board of Directors directed staff to meet with the Financial District stakeholders to discuss options for privately funding the Flower/5th/4th Street station, but no funding sources were identified. However, the design of the Locally Preferred Alternative would not preclude a station at 5th and Flower Streets from being built as a possible future, separate project.

Response to Comment PC26-4

The Metro Board of Directors voted on October 28, 2010 to designate the Fully Underground LRT Alternative without the Flower/5th/4th Street station as the Locally Preferred Alternative. An enhanced pedestrian walkway connecting the 4th/Flower Streets area to the existing 7th Street/Metro Center Station would be constructed on Flower Street to improve access to the Financial District. The design of the Locally Preferred Alternative would not preclude a station at 5th and Flower Streets from being built as a possible future, separate project.

Response to Comment PC26-5

Metro will undergo a formal station naming process that includes community participation. The stations are referred to in the EIS/EIR by intersection so as to be as descriptive as possible about their locations, but these will not necessarily become the actual station names.

Response to Comment PC26-6

The Locally Preferred Alternative includes double track beneath Flower Street, and a pocket track for the storage or reversal of trains. Metro performed a rail simulation as part of the Draft EIS/EIR process, which verified that the current design of the Fully Underground LRT Alternative would be able to accommodate the anticipated volume of trains.

Response to Comment PC26-7

The number of entrances at each station is based on ridership levels as well as community needs. Metro will integrate the station entrances into the surrounding neighborhoods through design.

Hello,

I have not been able to attend the draft EIR meetings for the Downtown Connector Project due to work schedule conflicts, however I wanted to share my comments: 1

This is a very important line and will be the missing link that currently prevents our metro system from being truly regional. I strongly support the underground option and encourage Metro to maintain the proposed station at 5th and Flower Streets. The 7th Street/Metro station, while not too far away, will be very busy once it also serves as the Expo Line terminus.

To help relieve crowding and to better serve the financial district for workers and visitors alike, a 5th and Flower Station is needed. This also allows the downtown area, which is the largest employment center in the region to be well served by our transit network. 2

Thank You,

Lawrence M. Aldava

I'm excited to see this come to fruition... and all underground! 1

I hope you can secure funding for the 5th and Flower stop as it would be very busy and convenient for commuters (serving the financial district more directly than the 7th St. Metro stop) and it would also relieve a lot of pedestrian congestion at the 7th St. Metro stop since that will probably be crazy packed during rush hour, once all lines are up and running. 2

If 5th and Flower cannot be funded, I'm wondering if you've considered building a basic "box" stop space there (non-operational), in order to leave open the option for a future stop without going over budget, or disrupting service in the future (should it get funded and built at a later date.) Or is that even feasible/cheaper? 3

REGIONAL CONNECTOR HEARING YK 9/28/10

Yukio Kawaratani -- Representing myself

The Regional Connector is a worthwhile project, but only if the Fully Underground Locally Preferred Alternative is selected by the MTA Board. 1

The Draft EIS/EIR correctly states that the Little Tokyo community, in comparison to all other areas along the route, will suffer many disproportionate adverse impacts during construction. 2

Hopefully, the Draft will be modified to include more effective mitigation measures to lesson the economic suffering and in some cases the demise of Little Tokyo businesses. 3

The Draft does not adequately address the adverse impacts that the Underground Emphasis Alternative would impose on Little Tokyo. 4

For instance, the Alameda underpass will adversely impact Little Tokyo traffic during and after construction. 5

The four surface rail tracks at 1st and Alameda will create dangerous conflicts between pedestrians, vehicles and trains. 6

The proposed pedestrian bridge will be a permanent visual blight and liability. 7

Little Tokyo pedestrian movements are all at sidewalk level. Who will want to go up 20 feet by stairs or elevator, cross the 100 feet long bridge and go down 20 feet? People will take their chances. With trains coming frequently from 4 tracks and 4 directions, some will be injured or killed. 8

These are just some of the reasons the Japanese American Community cannot accept the Underground Emphasis Alternative. I urge the MTA Board to approve the Fully Underground, Locally Preferred Alternative. 9

PC30

Responses to Comments from Kawaratani, Yukio

Response to Comment PC30-1

Thank you for your comment. Support for the Fully Underground LRT Alternative is noted. The Metro Board of Directors voted on October 28, 2010 to designate the Fully Underground LRT Alternative as the Locally Preferred Alternative.

Response to Comment PC30-2

Concurrence with the Draft EIS/EIR conclusions is noted.

Response to Comment PC30-3

Mitigation measures were identified in Section 4.14, Economic and Fiscal Impacts, of the Draft EIS/EIR to reduce economic impacts associated with construction of the Locally Preferred Alternative to the Little Tokyo community. Since publication of the Draft EIS/EIR, refinements to the Locally Preferred Alternative have reduced the significance of potentially adverse economic and fiscal impacts during construction in Little Tokyo, refer to Section 4.14, Economic and Fiscal Impacts, of this Final EIS/EIR. The refinements reduce the amount of cut and cover, the need for roadway and sidewalk closures, property acquisitions, and overall disruption to businesses during construction. The refinements to the Locally Preferred Alternative have also reduced the number of privately-owned parcels that would be completely or partially acquired. Appropriate candidate mitigation measures identified in the Draft EIS/EIR have been refined and confirmed in this Final EIS/EIR and the Mitigation Monitoring and Reporting Program for the Locally Preferred Alternative (Chapter 8) of this Final EIS/EIR. The Locally Preferred Alternative would not have significant economic effects after implementation of mitigation. Refer to Section 4.14, Economic and Fiscal Impacts, of this Final EIS/EIR.

Response to Comment PC30-4

The Draft EIS/EIR adequately analyzed impacts to Little Tokyo as a result of the Underground Emphasis LRT Alternative in Chapter 3, Transportation Impacts and Mitigation, and Chapter 4, Environmental Analysis, Consequences, and Mitigation. Please refer to Responses to Comments PC30-5 through PC30-9, below, for detailed responses regarding concerns raised by the commenter.

Response to Comment PC30-5

The Locally Preferred Alternative would not include an Alameda Street underpass. The traffic lanes and pedestrian crossings at 1st and Alameda Streets would remain at-grade, as they are today.

Response to Comment PC30-6

Metro designs its grade crossings to minimize potential conflicts between pedestrians, vehicles, and trains. No grade crossings would be constructed as part of the Locally Preferred Alternative. The Little Tokyo pedestrian bridges are included only in the At-Grade Emphasis LRT Alternative and Underground Emphasis LRT Alternative. The Metro Board of Directors voted on October 28, 2010 to designate the Fully Underground LRT Alternative as the Locally Preferred Alternative.

Response to Comment PC30-7

The Locally Preferred Alternative does not include any pedestrian bridges in Little Tokyo.

Response to Comment PC30-8

Metro designs its grade crossings to minimize potential conflicts between pedestrians, vehicles, and trains. No grade crossings would be constructed as part of the Locally Preferred Alternative. The Little Tokyo pedestrian bridges are included only in the At-Grade Emphasis LRT Alternative and Underground Emphasis LRT Alternative. The Metro Board of Directors voted on October 28, 2010 to designate the Fully Underground LRT Alternative as the Locally Preferred Alternative.

Response to Comment PC30-9

Thank you for your comment. Support for the Fully Underground LRT Alternative is noted. The Metro Board of Directors voted on October 28, 2010 to designate the Fully Underground LRT Alternative as the Locally Preferred Alternative.

To whom it concerns ,

My name is Christine Baisez i live at the Higgins with my daugter(6 years old) since 2004 and we love it ,i will be very upset to get a metro line in front of our front door ,I love mass transit (we are french, public transportation are so amazing and a must to a greener healthiersocial communauty) but 'at-grade' will have very negative impacts for our building and for neighborhood traffic (congestions, deaths & serious injury...). Apart from the noise and visual impacts, 'at-grade' would mean a very high volume of train traffic along 2nd Street outside our door during peak times.
Really hope our(higgins residents and owners) concern will be taken seriously into consideration .
Cordially ,christine and Lea

Subject: Below Grade Option Please

To Whom It May Concern:

As a resident of the Higgins Building and a long time Downtowner, I would like to strongly urge the committee to only consider the Below Grade Regional Connector option. Traffic is bad enough in Downtown and to have above grade construction and additional interference to the traffic we must deal with is horrible. In addition, having train operation during the many needs to close off Broadway and adjacent streets due to festivals, protests, events, etc.. would be detrimental to the efficiency of this project. 1

Thank you for your time.

Nelson Lee

Hello:

As a resident downtown, who lives at 108 W. 2nd, and as a metro user, I strongly urge you to make the connector fully underground. This will be the fastest, most efficient route and will gain the highest patronage. Any at-grade segment would move more slowly and would disrupt traffic flow, making downtown driving worse instead of better.

The underground choice is best for subway travelers, drivers, pedestrians, and residents. Everyone would love it.

1

Thanks very much,

Hello,

I have heard that the Blue Line is currently running at near-capacity, and will require very expensive upgrades in order to further increase its capacity. If trains were to run all the way to Pasadena or Azusa, these upgrades will have to be made due to the large influx of passengers. Therefore, wouldn't it make more sense to have an Eastside - Long Beach Line and a Pasadena / Azusa - Santa Monica Line? The Eastside corridor is less than 1/3 of the length of the combined Pasadena and Foothill corridors, and thus will generate far less passengers and will create a lesser strain to the Blue Line, while the newer, better designed Expo Line will not be inundated by passenger traffic from Azusa and Pasadena like the Blue Line. Also, this would create two lines of more equal distance.

1

PC36

Responses to Comments from Zhao, Yuqiao

Response to Comment PC36-1

It is Metro's goal to operate its rail lines in a manner that maximizes convenience and ridership. Ridership modeling indicates sufficient capacity on the Blue Line to accommodate changes in travel patterns caused by the Regional Connector. Preference for Culver City-Pasadena and Long Beach-East Los Angeles routes is noted. The Locally Preferred Alternative includes Long Beach-Pasadena (eventually Montclair) and East Los Angeles-Culver City (eventually Santa Monica) routes. However, the track configuration would allow Culver City-Pasadena and Long Beach-East Los Angeles train movements to occur when necessary.

Metro

DOWNTOWN CONNECTOR COMMENTS

From Mark R. Johnston
4185 Van Buren Street, Chino, CA. 91710

I BELIEVE THIS LINE IS EVEN MORE IMPORTANT THAN THE WILSHIRE SUBWAY EXTENTIONS, AS THIS EFFECTS 4 SEPARATE LIGHT RAIL LINES, WHILE THE SUBWAY IS BASICALLY AN EXTENTION OF 1 LINE. BECAUSE OF THIS, I ASK YOU DO WHATEVER YOU CAN TO PUSH THIS TO THE HEAD OF THE LINE. MY COMMENTS SPECIFIC TO THIS LINE ARE AS FOLLOWS: 1

1/ The fully underground option is the only one I will support and from the comments tonight, the community as well. If you use this option, you will find more support from the community as they will have to deal with construction for 3-4 years. 2

2/ Each of the existing light lines, plus the one being built have very slow sections=
>Pasadena Gold through Highland Park
>ELA Gold through the Indiana zig=zag
>Blue to Long Beach has slow street running on Washington in LA and on LB Blvd in Long Beach
>Expo is going to have slow street running on Flower in LA, and then again on Colorado Blvd in Santa Monica.
Because of this, you need to make the downtown section of the Regional connector as fast as possible- fully underground only ! 3

3/ Get your mitigation measures agreed upon NOW, so the community will know what you will cover. I work insurance and proof of claim is always hard in cases like this. Small businesses are the hardest to prove loss of business/loss of use etc. Why not considering things like offering to paint their buildings or physical improvements like trees and sidewalks in lieu of cash payments? Double win, makes area look great and business gets an upgrade they may not be able to afford otherwise 4

4/ Make sure the junction at 2nd/Alameda is a "Stacked" cross-over. For example, the north and east direction on the top and the west and south direction on the bottom. Eliminates trains having to cross-over in front of each other- good for safety. Will be no outbound delays waiting for cross-over movements. Will only have to worry about inbound moves when 2 trains show up at the same time. Basically like the Wilshire/Vermont station on the Red=Purple line. 5

5/ Consider " double stacking" in stretches of 2nd street as that street is very narrow in places. Keeps you away from the bottoms of older buildings. 6

6/ Get Eli Broads museum, the Grand Park , whatever tower/shopping mall or housing that is build, plus Disney Hall all on board with the 2nd/Hope station. Have them contribute to pedestrian connections and walk ways. 7

7/ Do not leave out Flower/4th/5th. 7th and Flower will be overloaded and this station will relieve the pressure. If you have to skip it now, build the station box and come back later with more money to finish it and open it. 8

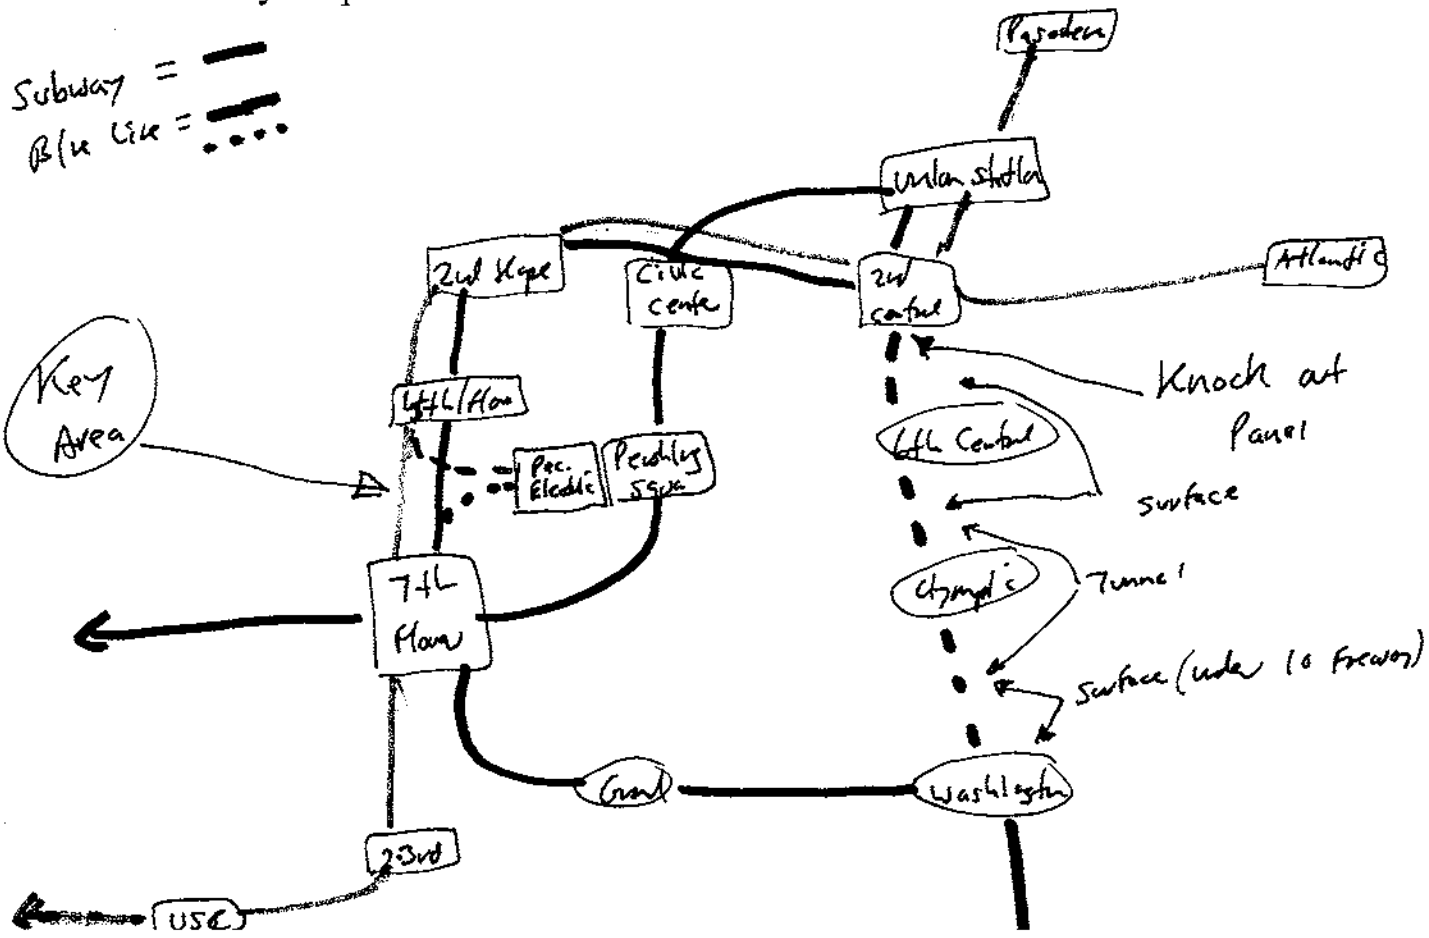
8/ Build all stations for 4 cars. Look what happened on the Blue, You build 2 car and had to go back and build for 3. Both sections of the Gold are 3 and Expo will be also....But think for the future. What if you have to go back and go to 4 car platforms on all these lines.. Since these lines are at ground or aerial outside Downtown LA, they could be extended to 4 (admittedly expensive). But downtown is different. If you don't do 4 now, it will almost be impossible to go back later and go from 3 to 4. 9

9/ Make sure you go with the absolutely best high-tech signaling to allow 2-3 minute headways 10

All the above items are pretty straight forward, common sense and I think most have been mentioned before. Now I have 2 comments a little outside the box, but will greatly affect the future of transit in downtown. A little creative, but I think will be really helpful. .

1/ Consider a connection as a stub line into the old Pacific Electric building basement. It is on the same level as the Pershing Square subway station. (PS- This idea came from the father of light rail, the gentlemen who started the SD Trolley, James Mills). My suggestion is that you can turn back blue line trains or even gold, off the main line. You can hold extra rush hour trains.. It can become another transfer point to the subway, not just 7th/flower. The Blue and Expo are going to have much higher ridership than either of the Gold Line legs, so instead of always running 3 car sets all the way to the end, you can turn back some. Plus stack up additional rush hour only sets. While you can use as storage track, it may be easier than building a 3 track pocket track under the streets when width is an issue. I believe would not be hard to accomplish, but will give you really great operational flexibility. My map=

11



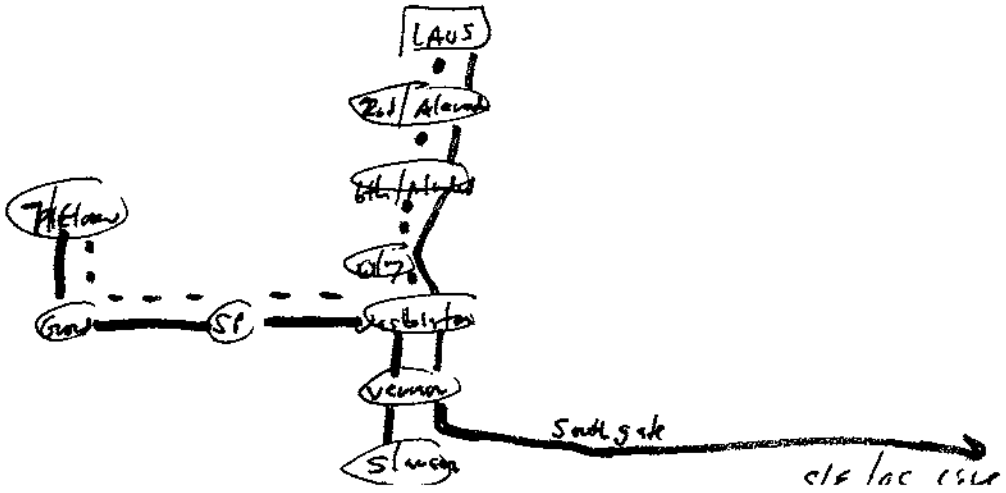
2/ My other suggestion is to build a "knock out panel" just west of the new 2nd/Alameda station in order to facilitate a line down Central Ave as the one day (and it will come) as the Blue Line shortcut to/from Union Station. Central is plenty wide for several miles south towards Olympic. At which point, a short tunnel will be needed to then align the track into the north end of the MTA owned property just north of the Santa Monica freeway where it could come up to ground level, go under the freeway and then continue right into the existing junction with the Blue at Washington. I propose stations at 6th and Central (as 6th turns into Whittier Blvd) Central and Olympic. Nice spacing between 2nd/Central and Washington/LB Blvd. This need to be coordinated with the Harbor Subdivision people who had talked about some kind of elevated line on Alameda to get to 1st/Alameda to allow the Harbor Sub Line (if build as a light rail) to get access I assume to Union Station. I see this segment as allowing= 12

>alternating Blue Line trains to go direct to LA Union Station

>East LA line passengers to transfer at 2nd /Alameda for a much quicker ride to Long Beach

>You could bring some Gold Line trains (either Pasadena or ELA) down this line to Washington to allow West or South transfers to the Blue Line

>Or depending on what happens with the SE corridor (the PE Orange County line study), this also could be an entry point for that project to get to Union Station by joining that line down near South Gate/Slauson into the extisting Blue, then traveling up my new connection to LAUS. My map is on the ~~next~~ page.



I have lots of ideas and every MTA meeting I have ever gone to for all the lines, never have heard back . Do you really review all the suggestions submitted? Just interested. Thanks again for the time. This is a great project. Wish you could build it a lot faster. Thank you.

13

PC37

Responses to Comments from NARP-TRAC-PRS, Johnston, Mark R.

Response to Comment PC37-1

Support for prioritized implementation of the Regional Connector project is noted. Please refer to Responses to Comments PC37-2 through PC37-13, below, for detailed responses regarding concerns raised by the commenter.

Response to Comment PC37-2

Thank you for your comment. Support for the Fully Underground LRT Alternative is noted. The Metro Board of Directors voted on October 28, 2010 to designate the Fully Underground LRT Alternative as the Locally Preferred Alternative.

Response to Comment PC37-3

Comment acknowledged. Support for the Fully Underground LRT Alternative is noted. The Metro Board of Directors voted on October 28, 2010 to designate the Fully Underground LRT Alternative as the Locally Preferred Alternative. The east-west and north-south routes of the Locally Preferred Alternative would each operate with five minute headways during peak hours, combining to yield trains every 2.5 minutes in each direction along the Regional Connector.

Response to Comment PC37-4

Comment acknowledged. Appropriate candidate mitigation measures identified in the Draft EIS/EIR have been refined and confirmed in this Final EIS/EIR. The community has been involved in the refinement of the mitigation measures through meetings held during the preparation of this Final EIS/EIR. Metro has committed to other mitigation measures in lieu of cash payments to assist business in Little Tokyo.

Response to Comment PC37-5

Metro performed a rail simulation for both the single-level junction and two-level junction configurations of the 1st and Alameda Streets intersection. The simulation revealed that both configurations would be able to adequately handle the maximum volume of trains anticipated for the Regional Connector without propagating delays through the system. The two-level junction (Little Tokyo Variation 2) was not pursued for further study in the Draft EIS/EIR because of its potential impacts to the Los Angeles Hompa Hongwanji Temple. Trackside signals, cab signaling, and automatic train control systems would be used to ensure the safety of the single-level junction.

Response to Comment PC37-6

Constructing tunnels stacked on top of each other would require higher-risk tunneling activities than the side-by-side tunnels identified for the Locally Preferred Alternative. Construction of the 2nd/Broadway station would also require deeper excavation in the vicinity of historic buildings in order to accommodate stacked tunnels. As such, the Locally Preferred Alternative includes side-by-side tunnels beneath 2nd Street.

Response to Comment PC37-7

The Broad Art Foundation Museum, currently under construction, is projected to include a plaza above General Thaddeus Kosciuszko Way Connecting to Upper Grand Avenue. In order to provide access from the 2nd/Hope Street station to Upper Grand Avenue, an elevator would be built as part of the Locally Preferred Alternative from the station entrance to the plaza if one is not already provided. If the plaza is not built as part of the Broad Art Foundation Museum, a pedestrian connection (such as a pedestrian bridge) would be built as part of the Locally Preferred Alternative from the elevator to Upper Grand Avenue. Metro will work with the Related Companies and the Broad Foundation to enhance the pedestrian connections at the 2nd/Hope Street station.

Response to Comment PC37-8

The Metro Board of Directors voted on October 28, 2010 to designate the Fully Underground LRT Alternative without the Flower/5th/4th Street station as the Locally Preferred Alternative. The deletion of the station was done in an effort to reduce the cost of the project while still meeting the project's purpose and need. An enhanced pedestrian walkway connecting the 4th/Flower Streets area to the existing 7th Street/Metro Center Station would be constructed on Flower Street to improve access to the Financial District. The design of the Locally Preferred Alternative would not preclude a station at 5th and Flower Streets from being built as a possible future, separate project.

Response to Comment PC37-9

All light rail stations on the Metro Rail system can now accommodate three-car trains. Four-car trains would exceed the distance between crossings on some street-running portions of the system. As such, four-car trains are not practicable.

Response to Comment PC37-10

East-west and north-south LRT routes would each operate with five minute headways during peak hours, combining to yield trains every 2.5 minutes in each direction, with development of the Fully Underground LRT Alternative (the Locally Preferred Alternative). Adequate signaling would be incorporated into the LRT lines that would connect to the Regional Connector to achieve headway goals.

Response to Comment PC37-11

The Regional Connector alignment beneath Flower Street would not be level with the abandoned Belmont Tunnel leading to the former Pacific Electric subway terminal. The tunnel has also been severed by the foundations of high-rise buildings built since its abandonment in the 1960s. The Locally Preferred Alternative includes a pocket track between the 7th Street/Metro Center Station and the 2nd/Hope Street station, which can accommodate the need to turn back trains.

Response to Comment PC37-12

The alignment immediately west of the new underground station in Little Tokyo would be constructed using tunnel boring machine excavation. Knockout panels are not feasible in bored tunnels. Extension of the station box farther west is not practicable due to the potential for impacts to the Japanese Village Plaza parking structure. Similar alignments on Alameda Street were studied in the Metro Blue Line connection studies in the early 1990s, but were not pursued

due to a desire to serve the major activity centers in downtown Los Angeles. A potential connection between the Metro Blue Line and potential future rail service on the Harbor Subdivision was studied in the Metro Harbor Subdivision Alternatives Analysis Report.

Response to Comment PC37-13

Yes, all comments from meetings are reviewed, and all Draft EIS/EIR comments are responded to in writing.

RE: Comments on Draft EIS/EIR for Regional Connector

Dear Ms. Roybal-Saltarelli:

As a resident of Savoy on the corner of 1st and Alameda Street, I would like to formally support the **Fully Underground Alternative** that was added to the draft EIS/EIR as the only truly viable build option for this community. I agree with the team's recommendation and endorsement of the Fully Underground Alternative as the "locally-preferred" alternative. 1

I also want to voice my concerns about construction, traffic, and related impacts on residents as the project moves forward. I ask the MTA to work to protect the vibrancy of this community through mutual cooperation and adequate mitigation measures. 2

Thank you for your consideration.

Sincerely,

Enrico Valenzuela

Responses to Comments from Salumbides, Romeo

Response to Comment PC38-1

Thank you for your comment. Support for the Fully Underground LRT Alternative is noted. The Metro Board of Directors voted on October 28, 2010 to designate the Fully Underground LRT Alternative as the Locally Preferred Alternative.

Response to Comment PC38-2

Comment acknowledged. Traffic and construction impacts associated with the Locally Preferred Alternative were discussed in Chapter 3, Transportation Impacts and Mitigation, and Section 4.18, Construction Impacts, of the Draft EIS/EIR and this Final EIS/EIR. Metro has coordinated with the Little Tokyo community throughout the design and environmental process of this project. For example, Metro has assisted the community in establishing the Little Tokyo Working Group, provided funding for a consultant to assist the community in understanding the potential project impacts during preparation of the Draft EIS/EIR, and coordinated with community groups during preparation of this Final EIS/EIR. Metro will continue to coordinate with the community during project construction, which will include the development of a community outreach plan to notify local communities of construction schedules, street lane and sidewalk closures, and detours. Appropriate candidate mitigation measures identified in the Draft EIS/EIR have been refined and confirmed in this Final EIS/EIR and the Mitigation Monitoring and Reporting Program for the Locally Preferred Alternative (Chapter 8).

Responses to Comments from Grewal, AnnMarie

Response to Comment PC41-1

Thank you for your comment. It is noted that the commenter supports the At-Grade Emphasis LRT, Underground Emphasis LRT, and the Fully Underground LRT Alternatives, and opposes the No Build Alternative. The Metro Board of Directors voted on October 28, 2010 to designate the Fully Underground LRT Alternative as the Locally Preferred Alternative.

Metro has and will continue to coordinate with the Little Tokyo business community regarding the Regional Connector project.

Response to Comment PC41-2

It is Metro's goal to minimize adverse impacts to the Little Tokyo community, including impacts to businesses. Metro will implement the mitigation measures proposed by the Little Tokyo Community Council and Little Tokyo Business Improvement District/Little Tokyo Business Association regarding business interruption shown in the Mitigation Monitoring and Reporting Program (Chapter 8) of this Final EIS/EIR. Metro will work with the Regional Connector Community Leadership Council to serve all businesses affected by Regional Connector construction.

Response to Comment PC41-3

Metro understands the impacts that construction would have in the Little Tokyo community, and will work with the community to minimize impacts to businesses. During construction, Metro will minimize lane and sidewalk closures, and will provide adequate detours to maintain pedestrian flow. Temporary replacement parking will be provided during construction as needed to offset the impact of on-street and off-street parking removal. As part of temporary replacement parking efforts, Metro will provide two acres of land on the Mangrove property, located at the northeast corner of 1st and Alameda Streets, for the purposes of providing supplemental parking services, such as valet parking services during construction. Please refer to the Transportation Impacts and Environmental Justice sections of Chapter 8, Mitigation Monitoring and Reporting Program for the Locally Preferred Alternative, for more information regarding construction parking mitigation measures.

To: Regional Connector
Subject: A Public Comment on the Regional Connector DEIR

Hello RC Staff,

My name is John Gove, and I am a life-long resident of the San Gabriel Valley. Presently I live in Monrovia and sometimes use the gold line to get to downtown. However, reaching the city center and historic core require a cumbersome transfer to the red line at Union Station. The delay makes driving more expedient for Main Street or 7th St. and Grand destinations. I look forward to a single seat ride from the Sierra Madre Villa station to the Broadway station or the 7th St. Metro Center. I have closely followed the Regional Connector's evolution for the past 3 years, and I'm by and large pleased with the current DEIR. However, please consider the following comments for the record. 1

1) The inclusion of the "fully underground" alternative is wonderful and the only elegant, modern solution for the RC. It shows foresight on the part of the Little Tokyo residents' who fought for it. The at-grade alternative is too cumbersome for the grid and reminiscent of the painfully slow transit already experienced on the blue line along Washington Blvd. The train portal and pedestrian bridge structure proposed in the underground-emphasis alternative are downright reminiscent of the hulking ELs of Chicago and Brooklyn. I am aware of the cost increase for going fully underground, but I consider it money well spent, offset by the potential for better development. Moving the train portals and eliminating the pedestrian bridge will leave the Office Depot block less constrained for redevelopment. Not grade-separating Alameda and not splitting the Little Tokyo station over an intersection will open the intersection for street-facing retail, generating better tax revenue and pedestrian activity. I will definitely use the underground station to get to the Lazy Ox Canteen. 2

2) I am very concerned about the connectivity of the Hope St. station to Upper Grand Ave. I have combed through the published diagrams and see scant reference to such a connection. From a single DEIR diagram, I see a "pedestrian bridge". Since there is a three-story grade difference to Hope St., I assume the diagram's depiction is an elevator at the end of the "pedestrian bridge". I have serious concerns about this under-designing. Even large capacity elevators seem to be designing for congestion. I easily imagine an event on Grand Avenue attracting more people in a concentrated time than elevators can accomodate. Escalators are essential. Perhaps the assumption is that people will simply walk up 2nd St. along Disney Hall's south wall, but that seems like bad market research. People avoid walking up hills. Angels Flight is good market research from over 100 years ago; people don't want to hike Bunker Hill. I bet I 3

would not be the only one walking up the hill thinking, "So they made a Bunker Hill stop that doesn't get you to Bunker Hill?" Prior to the DEIR, I attended an RC meeting at Lake Ave. Congregational Church and asked Metro representatives about the connection. They said they had spoken with the developer but deferred to Related Co. and the Grand Avenue Authority on the final details. Since the Broad Foundation is now leasing the most adjacent parcel, I want to know a more useful answer on the nature of the connection and when it will be implemented. Will the "pedestrian bridge" open when the line opens , or will it wait until Related Co. develops the southern parcel adjacent to the Broad Foundation museum? If it is the latter, that practically seems like saying it won't happen, since their projections for groundbreaking are repeatedly postponed.

3 cont'd

3) The proposed 5th St. station should not be eliminated. Some people suggest this station is too close, just a 1/4 mile to either station, so it should be cut to save money and speed up the transit time. This is short-sighted for two reasons. First, the 5th St. station will lessen the RC's traffic impact at the 7th St. station. Second, this Regional Connector stop is poised to provide front door service smack in the middle of the financial core next to a hotel with 1354 rooms. The job density at this stop is remarkable and more than enough to generate trips for three close stations. Some argue that these office tower jobs don't generate transit trips. That claim accurately depicts only a particular generation of workers. However, attitudes about transit are shifting between the generations, and younger generations are increasingly pro-transit, especially rail transit. For example, on a recent trip to Washington, D.C., I researched the federal redevelopment at the Suitland, just outside the district in Maryland. This major government center was initially constructed 60 years ago as an auto-centric employment hub for government departments, namely the Census Bureau, which competes among Fortune 500 companies for executives and analysists - workers comparable to any found Downtown Los Angeles. They studied their employees and found that new hires favorably viewed commuting via metro rail. Since a wave of retirement coincided with the redevelopment, the entire master plan for the redevelopment abandoned the highway and centered on the rail stop. Billions of dollars of present and future development were cast in favor of changing attitudes about rail transit. Meanwhile, the old Suitland is set to be demolished. It seems foolish for LA to do the opposite, especially when the development is already there! Yes, the station is close to 7th and cutting the station could save a whole 2 minutes of transit time, but people aren't fools, this stations is just too useful to pass up. If this generation doesn't get that, no big deal, the next one already does.

4

Thank you for all your hard work,

John

Thank you for your comment. Please refer to Responses to Comments PC43-2 through PC43-4, below, for detailed responses regarding concerns raised by the commenter.

Response to Comment PC43-2

Thank you for your comment. Support for the Fully Underground LRT Alternative is noted. The Metro Board of Directors voted on October 28, 2010 to designate the Fully Underground LRT Alternative as the Locally Preferred Alternative.

Response to Comment PC43-3

The Broad Art Foundation Museum, currently under construction, is projected to include a plaza above General Thaddeus Kosciuszko Way connecting to Upper Grand Avenue. In order to provide access from the 2nd/Hope Street station to Upper Grand Avenue, an elevation would be built as part of the Locally Preferred Alternative from 2nd/Hope Street station to the plaza, if one is not already provided. If the plaza is not built as part of the Broad Art Foundation Museum, a pedestrian connection (such as a pedestrian bridge) would be built as part of the Locally Preferred Alternative from the elevator to Upper Grand Avenue, both of which would accommodate demand and provide access for persons with disabilities.

Response to Comment PC43-4

Support for the Flower/5th/4th Street station is noted. The Metro Board of Directors voted on October 28, 2010 to designate the Fully Underground LRT Alternative without the Flower/5th/4th Street station as the Locally Preferred Alternative. The deletion of the station was done in an effort to reduce the cost of the project while still meeting the project's purpose and need. An enhanced pedestrian walkway connecting the 4th/Flower Streets area to the existing 7th Street/Metro Center Station would be constructed on Flower Street to improve access to the Financial District. Metro understands the importance of serving the Financial District and believes that the Locally Preferred Alternative still meets the purpose and need of the project despite the station deletion. Deletion of the Flower/5th/4th Street station would result in minimal ridership losses because most riders would use the 2nd/Hope Street station or 7th Street/Metro Center Station, which would service the Financial District. After the October 28, 2010 meeting, the Metro Board of Directors directed staff to meet with the Financial District stakeholders to discuss options for privately funding the Flower/5th/4th Street station, but no funding sources were identified. Metro agrees that the presence of enhanced rail transit would draw more riders from the nearby office towers, and believes that the pedestrian enhancement to 7th Street/Metro Center Station would improve access to businesses in the vicinity of 5th and Flower Streets. The additional information about the Suitland development is appreciated. However, the design of the Locally Preferred Alternative would not preclude a station at 5th and Flower Streets from being built as a possible future, separate project.

Fully underground choice is correct. Other plans will increase congestion + force eventual conversion to underground at much greater cost.

Subject: Comments on draft EIR Regional Connector

We support building this downtown area Light Rail project, as proposed, ASAP to improve mobility, reduce congestion, reduce air pollution, and reduce our dependency on imported oil. 1
This regional connector will provide a one seat ride from Santa Monica to East LA, and from Long Beach to Pasadena / San Gabriel Valley. As overall ridership for the entire Metro rail system continues to rise, this downtown connection will be essential to avoid overcrowding and reduce total trip durations for many commuters. Let's build it right (underground option) from the beginning. Eliminating one key underground station to save money upfront is shortsighted. 2
This project will enhance other good Metro Light Rail extensions: 3
Expo phase 2 to Santa Monica
Gold phase 2 to Claremont / Ontario
East LA phase 2

Thanks and good luck,
Daniel Walker

Subject: Public Comment regarding Regional Connector

Dear Ann,

I wish to state my concerns with the Metro Regional Connector underground option. Unfortunately I have not been able to attend the hearings, but I have had personal meetings with consultants for the Metro and am aware of what the plans are. My family owns the brick building on the southeast corner of First and Hewitt St. First, I would like to say that I am happy that plans are underway to make the Metro more efficient and useful for the Los Angeles community. However it is unfortunate that plans for the connector were not built into the plans for the Gold Line extension as it would have saved much time, money, and inconvenience. 1

While I am glad that the Gold Line extension was created, it has brought its share of difficulties as well, foremost being the elimination of parking. Free and metered street parking all along First St were eliminated for this project. In combination with the number of high-end condos and apartments that were built over pre-existing parking lots in the immediate vicinity (Mura, Artisan on Second, Savoy), this part of the Arts District/Little Tokyo has suffered a severe drop-off in parking options, which has been very detrimental to the lower-income individuals who reside in the area, many of whom reside in my building. 2

The plus side to all of this is the potential business and liveliness that a major transit center can bring. There are plans underway to turn the Mangrove site (kitty corner to my building) into a major mixed-use development, and to continue Hewitt St past my building and past First St all the way to Temple St. This would certainly help spark an otherwise neglected area. 3

The Regional Connector Underground Option as currently proposed would have a negative impact on this area in that it would cause trains to emerge right at the Hewitt/First intersection, thereby eliminating that cross walk, turn signal, and plans to continue Hewitt north to Temple St. It would serve to further isolate the south side of 1st Street from the north; Rose St to the west has already been shut off and privatized, and plans are underway to turn Garey St to the west into a pedestrian street. Hewitt St will soon be the only street within a two block radius to provide access to west-bound traffic on First St. To eliminate that option would be severely detrimental to the south side of First St and all of its residents. 4

I am not asking that the underground connector be eliminated, I am only asking that additional thought and engineering be evaluated to allow the new Gold Line train to emerge prior to the Hewitt/First intersection so that the intersection can be preserved. I am confident that it can be done. 5

Thank you for your consideration.

Sincerely,

Jay Chen

PC47

Responses to Comments from Chen, Jay

Response to Comment PC47-1

Comment acknowledged. Please refer to Responses to Comments PC47-2 through PC47-5, below, for detailed responses regarding concerns raised by the commenter.

Response to Comment PC47-2

Experience with the Gold Line Eastside Extension Phase 1 is noted.

Response to Comment PC47-3

Comment acknowledged. Metro is aware of the project and has coordinated with the owner.

Response to Comment PC47-4

Comment noted. Right turns, left turns, and pedestrian crossings on 1st Street would still be possible at Vignes Street and at Alameda Street as they are today. Both Vignes and Alameda Streets would provide access to westbound traffic on 1st Street. Metro believes that these intersections would provide adequate connections between the north and south sides of 1st Street in the absence of left turns and pedestrian crossings at 1st and Hewitt Streets.

Response to Comment PC47-5

Moving the proposed portal on 1st Street farther west is not feasible because it would create too steep of a grade for trains rising to the surface from the proposed junction beneath 1st and Alameda Streets.

I am opposed to keeping the 5th & Flower station in the Regional Connector plans. It is absurdly close to the present Metro Center station, and having too many stops will slow trains down and make the line less competitive. It doesn't seem to be a wise use of resources to spend scarce transit dollars on a station that may harm the alignment more than help it. 1

If the 5th/Flower station is going to be removed from the Regional Connector to save money, would it be possible to add an underground walkway (with above the ground exit) from 7th/Metro Center station to 5th/Flower?

Could be a good way to get people to that location easily (walking underground is convenient) without building a whole station.

I urge Metro to construct a station at 5th/Flower as part of the fully underground option for the Regional Rail Connector. Although such a station would add to the expense of the project, it will provide a great benefit to the heart of L.A.'s highrise financial district, and will be a key link in an extensive neighborhood transit network that's quickly transforming Downtown L.A. into the first Southern California community where it's truly feasible (and in fact, advantageous) to live without an automobile. Additionally, a 5th/Flower station would relieve pressure from the already-crowded Metro Center station, which will only see more congestion after the opening of the Regional Connector.

Elimination of the 5th/Flower station is not a prudent strategy to address the funding gap presented by the fully underground option. The gap is relatively minor, and elimination of the 5th/Flower station would permanently hobble Metro's flourishing rail network.

On page 2-54 2.6.3, The Fully Underground LRT Alternative - Little Tokyo Variation 2 is rejected due to higher Cost and Concerns over its effects on the Buddhist Temple. This alternative however is the only design that can safely accomidate the projected 2½ minute headways for the combined Blue/Gold LRT. Running trains this close together through a single level Junction creates an over-dependance on technology always working and people not erring. All it takes is a signal failing (See Washington DC Metro Accident of last Spring) or an oppose- 1

Metro

Blowing through a signal (See recent Blueline Vs MTA Bus accident or Chatsworth Metrolink accident). If we build a single level junction and run trains at 2½ min headways, Murphys law will prevail and sooner or later, 2 trains will meet with horrible results.

1 cont'd

Shortly after reading this document, I personely visited the area around the Buddhist Temple at 1st street and Vignes. While the main entrance to the temple is on 1st street, this is a pedestrian entrance only, and would not therefore be affected by having the LRT portal in the middle of the street. The parking Lot entrance is on Vignes street, thus also not affected by the portal. There is a gated driveway just west of the building, that leads to the rear of the temple, however left turn access from 1st street is already blocked by the existing Goldline LRT ROW running down the middle of 1st street. Replacing this At-Grade Row with a portal will have no practical effect on the Buddhist Temple

The Temple may be affected by construction activities along 1st street however, but this should take no more the two years. This negative short term effect can be minimized by simply shutting down the eastside Gold line during the construction period rather then re-routing the tracks. Given the extremely low ridership on this Line, few people would be affected by it disappearing for a few years.

Metro

PC52

Responses to Comments from Adelman, Charles

Response to Comment PC52-1

Fully Underground LRT Alternative – Little Tokyo Variation 2 was eliminated from further study due to potential impacts to the Los Angeles Hompa Hongwanji Temple. A rail simulation was performed to ensure that the Fully Underground LRT Alternative – Little Tokyo Variation 1 would be able to accommodate the Regional Connector's projected 2.5 minute headway. Metro would use measures such as trackside signals, cab signaling, and automatic train control systems to ensure safety. Safety systems would be included to prevent train operators from passing red signals.

Response to Comment PC52-2

The Locally Preferred Alternative's portal on 1st Street would be positioned away from the front of the Los Angeles Hompa Hongwanji Temple per the temple's request. Metro will implement the mitigation measures shown in the Mitigation Monitoring and Reporting Program for the Locally Preferred Alternative (Chapter 8) of this Final EIS/EIR to minimize impacts to all businesses and organizations, including the Los Angeles Hompa Hongwanji Temple. Metro would maintain Metro Gold Line service during the construction phase of the project, though two primary closures of the tracks around the existing Little Tokyo/Arts District station would be needed lasting up to six weeks each. Bus bridge substitution would be needed during these times. As with any existing operating lines, maintenance of tracks and overhead power lines may result in incidental service interruptions along the Metro Gold Line during construction. Metro will attempt to minimize closures and shorten the overall project construction schedule in order to reduce customer inconvenience. Additional information is provided in Section 4.18.2.6.1 of this Final EIS/EIR.

Re: EIS/EIR for Regional Connector

Dear Ms. Roybal-Saltarelli:

I am a homeowner and resident of Little Tokyo. I am writing to express my strong desire that Metro choose the Fully Underground alternative.

For the past six (6) years, I have lived in Little Tokyo. I chose this section of downtown LA to live in because of its established unique community character, sense of history, and distinctive independent retail and restaurant options. I believe that any above-ground regional connector option would jeopardize the unique community character that makes Little Tokyo attractive to many visitors, current residents, and potential future residents.

A Fully Underground option would reduce the noise level, prevent any unnecessary tragic accidents between cars and/or pedestrians and on-coming trains. In addition, a fully underground option is aesthetically more appealing. Visible railroad tracks would create visual blight and serve as an eyesore. 1

Finally, please know that appealing urban neighborhoods are largely products of independent retailers and restaurants. Because these types of stores are not omnipresent, they serve as destination drivers. We cannot afford to lose these stores due to loss of revenue caused by the construction of the Regional Connect. Therefore, I urge Metro to fairly compensate these stores during the construction period so that they will emerge as continuing operations after the completion of the Metro. 2

Again, as a homeowner and resident of Little Tokyo, I urge Metro to choose the Fully Underground option. 3

Sincerely,

Andrew Yick

Responses to Comments from Yick, Andrew

Response to Comment PC53-1

Thank you for your comment. Support for the Fully Underground LRT Alternative is noted. The Metro Board of Directors voted on October 28, 2010 to designate the Fully Underground LRT Alternative as the Locally Preferred Alternative.

Response to Comment PC53-2

Metro recognizes the important ways that independent retailers and restaurants contribute to community identity. Metro has included measures in the Mitigation Monitoring and Reporting Program for the Locally Preferred Alternative (Chapter 8) of this Final EIS/EIR to offset impacts to businesses affected by construction. These include providing in-kind support and assistance to businesses in an effort to minimize impacts of the project.

Response to Comment PC53-3

Thank you for your comment. Support for the Fully Underground LRT Alternative is noted. The Metro Board of Directors voted on October 28, 2010 to designate the Fully Underground LRT Alternative as the Locally Preferred Alternative.

Subject: Fully Underground LRT Alternative

I was pleased to attend the Little Tokyo presentation of alternatives last month. I support the concept of the Fully Underground LRT Alternative. I do have a question, however; will the tunnel along Second Street be built by excavating a trench and then covering, or by using the kind of tunneling machine that was used for the red line? A tunneling machine would have much less impact on the businesses in Little Tokyo. 1

Thank you. Yours,

David G. Moore

Support for the Fully Underground LRT Alternative is noted. The Metro Board of Directors voted on October 28, 2010 to designate the Fully Underground LRT Alternative as the Locally Preferred Alternative. The tunnels beneath 2nd Street would be constructed using a tunnel boring machine, and stations would be constructed using the cut and cover method. Similar tunnel boring machine equipment was used for Red Line construction, but the technology has since advanced to yield better performance and safety. Metro agrees that tunnel boring machine excavation is generally less impactful than the cut and cover method, and has refined the Locally Preferred Alternative to maximize tunnel boring machine use. No cut and cover would occur on 2nd Street in Little Tokyo, and the tunnel under Flower Street between 3rd and 4th Streets would be excavated using a tunnel boring machine instead of cut and cover.

Subject: Regional Connector on 2nd Street

I am a resident of the Higgins Building at 108 W. 2nd Street. I very much oppose the At-Grade Alternative because of the negative impacts on the neighborhood including noise and traffic congestion on 2nd street so near to my home. There is already a great deal of traffic on 2nd Street and I am concerned that an at-grade train would make the traffic congestion much worse and increase the likelihood of accidents.

I am very much in favor of the Below-Grade option, and often use public transportation.

RE: Comments on Draft EIS/EIR for Regional Connector

Dear Ms. Roybal-Saltarelli:

As a resident of Savoy on the corner of 1st and Alameda Street, I would like to formally support the **Fully Underground Alternative** that was added to the draft EIS/EIR as the only truly viable build option for this community. I agree with the team's recommendation and endorsement of the Fully Underground Alternative as the "locally-preferred" alternative. 1

I also want to voice my concerns about construction, traffic, and related impacts on residents as the project moves forward. I ask the MTA to work to protect the vibrancy of this community through mutual cooperation and adequate mitigation measures. 2

Thank you for your consideration.

Sincerely,

Japhet Hom

Response to Comment PC57-1

Thank you for your comment. Support for the Fully Underground LRT Alternative is noted. The Metro Board of Directors voted on October 28, 2010 to designate the Fully Underground LRT Alternative as the Locally Preferred Alternative.

Response to Comment PC57-2

Comment acknowledged. Traffic and construction impacts associated with the Locally Preferred Alternative were discussed in Chapter 3, Transportation Impacts and Mitigation, and Section 4.18, Construction Impacts, of the Draft EIS/EIR and this Final EIS/EIR. Metro has coordinated with the Little Tokyo community throughout the design and environmental process of this project. For example, Metro has assisted the community in establishing the Little Tokyo Working Group, provided funding for a consultant to assist the community in understanding the potential project impacts during preparation of the Draft EIS/EIR, and coordinated with community groups during preparation of this Final EIS/EIR. Metro will continue to coordinate with the community during project construction, which will include the development of a community outreach plan to notify local communities of construction schedules, street lane and sidewalk closures, and detours. Appropriate candidate mitigation measures identified in the Draft EIS/EIR have been refined and confirmed in this Final EIS/EIR and the Mitigation Monitoring and Reporting Program for the Locally Preferred Alternative (Chapter 8).

As a home owner at 108 W. 2nd Street, Unit 204, I would like it noted that the preference of our community is to have the fully below-grade option.

We love mass transit but 'at-grade' will have very negative impacts for our building and for neighborhood traffic (congestions, deaths & serious injury...). Apart from the noise and visual impacts, 'at-grade' would mean a very high volume of train traffic along 2nd Street outside our door during peak times. 1

Thank you in advance for noting my preference in this matter,

Adriana Centeno

Dear Sir or Madam:

I am the owner of a loft at 2nd and Main, facing 2nd street, and I am writing you today to tell you of my strong sentiments against the "at-grade" option for the metro connector. This will be right outside of my window, and the amount of noise it will generate will be unbearable. The street is narrow, and cars drive very fast on both Main and 2nd Streets, so I believe it could also be a very dangerous option to put this at street level. Please, for the consideration of downtown residents, please select the underground option. 1

Thank you,
Elana Santana

Comment * I think the only way that the Downtown Connector will be successful is to make it underground, so that the Gold Line - Blue Line route will be a true rapid transit route until it meets the street south of downtown. In every city I know of that has rapid transit, the lines go directly through the central business district without being hindered by street traffic. 1

Preference for the removal of the Flower/5th/4th Street station is noted. The Metro Board of Directors voted on October 28, 2010 to designate the Fully Underground LRT Alternative without the Flower/5th/4th Street station as the Locally Preferred Alternative. An enhanced pedestrian walkway connecting the 4th/Flower Streets area to the existing 7th Street/Metro Center Station would be constructed on Flower Street to improve access to the Financial District. The design of the Locally Preferred Alternative would not preclude a station at 5th and Flower Streets from being built as a possible future, separate project.

I have recently read the suggestion that the regional connector may save money by eliminating the proposed 5th & Flower station. I write to urge Metro not to do this. I am an attorney at a major law firm in the financial district (US Bank Tower) and I ride the subway almost everyday to work from my home in Hollywood. I am a lifelong proponent of public transportation in Los Angeles. Putting another station in the financial district will help convince busy professionals that riding the rail lines are in their interests. Whether I get off the red line at 7th & Metro or at Pershing Square it is a ten minute walk to my building. That adds a significant amount of time to my commute. A station at the heart of the financial district at 5th & Flower would cut that time drastically and would convince other professionals the that the system is accessible and convenient. The number of added riders who would purchase monthly passes over the years could very well help offset a large portion of the cost of building the station. I urge you to retain the 5th & Flower station. 1

Response to Comment PC62-1

Support for the Flower/5th/4th Street station is noted. The Metro Board of Directors voted on October 28, 2010 to designate the Fully Underground LRT Alternative without the Flower/5th/4th Street station as the Locally Preferred Alternative. The deletion of the station was done in an effort to reduce the cost of the project while still meeting the project's purpose and need. An enhanced pedestrian walkway connecting the 4th/Flower Streets area to the existing 7th Street/Metro Center Station would be constructed on Flower Street to improve access to the Financial District. Metro understands the importance of serving the Financial District and believes that the Locally Preferred Alternative still meets the purpose and need of the project despite the station deletion. Deletion of the Flower/5th/4th Street station would result in minimal ridership losses because most riders would use the 2nd/Hope Street station or 7th Street/Metro Center Station, which would service the Financial District. After the October 28, 2010 meeting, the Metro Board of Directors directed staff to meet with the Financial District stakeholders to discuss options for privately funding the Flower/5th/4th Street station, but no funding sources were identified. However, the design of the Locally Preferred Alternative would not preclude a station at 5th and Flower Streets from being built as a possible future, separate project.

Subject: Comments Regarding Draft EIS/EIR for the Regional Connector

October 13, 2010

Dolores Roybal Saltarelli, Transportation Planning Manager
Los Angeles County Metropolitan Transportation Authority

Ms. Roybal Saltarelli:

As we approach the conclusion of the review period for the Draft EIS/EIR of the Regional Connector Transit Corridor Project, I would like to offer the following comments:

1. I fully support the concept of the Regional Connector as it is a uniquely critical component of a sorely needed rail transit system in the greater Los Angeles region.
   a. The various light rail lines now in existence, and those that are either under construction or in the early planning stages, will serve a diverse group of communities that deserve to be connected to each other in a manner that will be the most efficient and cost effective for the large population of riders that is expected to materialize over the next generation.
   b. Continuing to construct rail lines that do not permit "one-seat" or "one-ticket" rides to the outer reaches of the rail system not only may discourage long distance commutes, but it may create a hesitation to board a train even for shorter commutes if riders know that the ride will require a transfer(s), additional fare(s) and/or longer commute times.
   c. The location of the Regional Connector Transit Corridor, as depicted in the Draft EIS/EIR, appears to offer the best option for the system as a whole.
2. With the conditions noted below, I can support only the Fully Underground alternative as the Locally Preferred Alternative (LPA). Any other build options are completely unacceptable as they will create environmental chaos and long-term difficulties for the Little Tokyo community. These concerns were well noted during the long community review process that was undertaken by the Metro staff prior to the release of the Draft EIS/EIR. Should the Fully Underground alternative not be selected as the LPA, I believe that the Little Tokyo community will fight the Regional Connector project with great intensity.

   My support for the Fully Underground alternative comes with the following conditions:
   a. To whatever extent possible, begin the tunnel boring from the west end of the project, near the 2nd Street/Flower Street/Hope Street intersection.
   b. Ensure that the Little Tokyo community stakeholders have a full seat at the table when developing and approving any impact mitigation measures.
   c. Ensure that the Little Tokyo community stakeholders are fully involved in the execution of the Mitigation Monitoring Plan that is created for this project.
   d. Ensure that the businesses within the Little Tokyo community are provided with a secure safety net, including:
      i. A designated fund set aside for targeted marketing for all businesses
      ii. Establishment of a Business Interruption Committee, composed of local businesses and property owners, that will have a direct line of contact with Metro so as to minimize business disruptions during all phases of the Regional Connector construction, and that will have the ability to ensure a timely resolution to any unforeseen problems.
      iii. The establishment of a business compensation fund that will assist the businesses in Little Tokyo in surviving the years-long disruption that is sure to heavily affect their business operations. Many individuals within the business community are strongly advocating for the "No Build" option. A business compensation fund would help to allay the concerns of many business people.
   e. The redevelopment of the current Office Depot block (bounded by 1st Street, 2nd Street, Central Avenue and Alameda Street) must not be planned without formal and equitable input from the Little Tokyo community stakeholders.

If the Fully Underground alternative is selected as the LPA, and the cost of the project becomes excessive, I would advocate for the dropping of the station at 5th Street and Flower Street, as it may be unnecessary due to the proximity of the two flanking stations.

Thank you for accepting these comments and entering them into the official records for the review of the Draft EIS/EIR.

Responses to Comments from Takashima, Wilbur

Response to Comment PC69-1

Comment acknowledged. Support for the Regional Connector Transit Corridor project is noted. It is the vision of the Regional Connector Transit Corridor project to connect the spokes of the regional system and provide a "one-seat ride" from Long Beach to Montclair and from East Los Angeles and the San Gabriel Valley to Santa Monica.

Response to Comment PC69-2

Thank you for your comment. Support for the Fully Underground LRT Alternative is noted. The Metro Board of Directors voted on October 28, 2010 to designate the Fully Underground LRT Alternative as the Locally Preferred Alternative.

Response to Comment PC69-3

Comment acknowledged. As indicated in Section 4.18, Construction Impacts, of the Draft EIS/EIR and this Final EIS/EIR, a range of durations, 2-4 months for the TBM insertion site and 24-48 months for the 2nd Street TBM tunnel, was assumed for tunneling activities at both insertion site options. These ranges are conservative estimates. Disproportionate impacts associated with each alternative were discussed in Section 4.17, Environmental Justice, of the Draft EIS/EIR and this Final EIS/EIR.

The small size of the 2nd/Hope Street station site would require a substantial portion of construction staging activities to occur in the surrounding streets, necessitating longer downtown street closures and increased cut and cover activities. This would have the effect of reducing mobility downtown and could deter visitors from frequenting many downtown communities, including Little Tokyo. In addition, the 1st/Central Avenue station site in Little Tokyo would need to be used as the TBM receiving site if the tunnel boring machines are inserted at the 2nd/Hope Street station site.

Based on comments received on the Draft EIS/EIR and input received from community meetings held during preparation of this Final EIS/EIR, the TBM insertion site options at 2nd/Central Avenue station and the 2nd/Hope Street station are no longer being considered. Instead the vacant property at the northeast corner of 1st and Alameda Streets, formerly known as the Mangrove Site, would be used as the insertion site. The TBM would be inserted approximately 700 feet from the originally proposed 2nd/Central Avenue insertion area, which would reduce the intensity of construction on the block bounded by 1st Street, Central Avenue, 2nd Street, and Alameda Street and result in fewer acquisitions. Tunnel boring activities from this site would proceed farther down Flower Street to 4th Street, instead of ending at the proposed 2nd/Hope Street station. Spoils would be removed within the Mangrove property, and trucks would be routed to the east and/or north to reach the freeway, and would not pass through Little Tokyo. Section 4.18, Construction Impacts, of this Final EIS/EIR contains further detail regarding estimated construction durations, construction scenarios, and tunnel boring operations at the Mangrove property. Chapter 3, Transportation Impacts and Mitigation, and Chapter 4, Environmental Analysis, Consequences, and Mitigation, of the Draft EIS/EIR have been revised based on the new TBM insertion site in this Final EIS/EIR. A portion of the Mangrove property was identified for construction staging in the Draft EIS/EIR. Inserting the

TBM at the Mangrove property would not result in new significant impacts or substantially increase the severity of impacts previously identified in the Draft EIS/EIR.

Worksite Traffic Control Plans will be developed in coordination with the Los Angeles Department of Transportation and presented to the community prior to construction activities. Metro will provide the community with updates regarding the construction schedule prior to and during construction.

Response to Comment PC69-4

During preparation of this Final EIS/EIR, Metro held meetings with community groups, which included meetings with the Little Tokyo Working Group, and identified municipal leaders to guide them in the decision-making process as it relates to the proposed station locations, alignment options, and anticipated mitigation measures. Community input during these meetings has been taken into account in the refinement of the Locally Preferred Alternative and the Mitigation Monitoring and Reporting Program for the Locally Preferred Alternative (Chapter 8), which are presented in this Final EIS/EIR.

Response to Comment PC69-5

Please refer to Response to Comment PC69-4, above.

Response to Comment PC69-6

The Mitigation Monitoring and Reporting Program for the Locally Preferred Alternative (Chapter 8) of this Final EIS/EIR contains confirmed mitigation measures that Metro will implement to address the adverse impacts of the Regional Connector. This includes targeted marketing for affected businesses during the construction phase.

Response to Comment PC69-7

Comment acknowledged. As indicated in Section 4.3 Community and Neighborhood Impacts, mitigation to reduce community and neighborhood impacts during construction of the Locally Preferred Alternative involves the development of a community outreach plan to notify local communities of construction schedules, street lane and sidewalk closures, and detours.

In addition, Metro will create a Regional Connector Community Leadership Council, consisting of local business and property owners, to streamline Metro's communication with all communities affected by the project and respond to their concerns during construction of the Locally Preferred Alternative.

Response to Comment PC69-8

Metro intends to work with the Little Tokyo community to support businesses throughout the construction phase of the project. It is Metro's goal to minimize the Regional Connector's adverse impacts to businesses. Targeted marketing efforts and other technical assistance are included as confirmed mitigation measures in the Mitigation Monitoring and Reporting Program for the Locally Preferred Alternative (Chapter 8) of this Final EIS/EIR. Metro believes that, once completed, the Regional Connector will be beneficial for the Little Tokyo business community.

Response to Comment PC69-9

Metro has refined the Locally Preferred Alternative and reduced the need for acquisitions on the block bounded by 1st Street, Central Avenue, 2nd Street, and Alameda Street. Only the northern portion of the parcel would need to be acquired for the Regional Connector. Any redevelopment of this portion of the block would occur separately from the Regional Connector project, but Metro would seek formal and equitable input from Little Tokyo stakeholders.

Response to Comment PC69-10

Preference for the removal of the Flower/5th/4th Street station is noted. The Metro Board of Directors voted on October 28, 2010 to designate the Fully Underground LRT Alternative without the Flower/5th/4th Street station as the Locally Preferred Alternative. An enhanced pedestrian walkway connecting the 4th/Flower Streets area to the existing 7th Street/Metro Center Station would be constructed on Flower Street to improve access to the Financial District. The design of the Locally Preferred Alternative would not preclude a station at 5th and Flower Streets from being built as a possible future, separate project.

Subject: Comments on the Draft EIS/EIR
For the Regional Connector Transit Corridor Study

Dear Ms. Sartarelli:

This letter is primarily in support of the underground option included in the downtown connector EIS/EIR. I believe that the basic Flower-2nd Street-Alameda/1st Street light rail transit connector is of great importance in linking major parts of the LA County rail transit system, tying together the Long Beach line to Pasadena/Azusa, and Santa Monica to East LA and likely cities east-southeast of this point.

Many have said that this connector is long overdue; but with financial needs elsewhere, it has finally taken the completion (well, Expo is very close to completion of its first segment) of four major light rail spokes approaching the LA CBD from different directions to finally build up the momentum to install this major connecting link in the light rail system.

Although I have spent a few minutes during public comments at meetings discussing the future (preservation or otherwise) of the existing surface track linking Union Station with Little Tokyo and Boyle Heights, currently in use, I now conclude that the opening of the all-underground LRT connector is of far greater importance than long-term retention, for various purposes, of this Alameda Street-1st Street surface track operation. This is based on expected high levels of ridership by transit with a minimum of transfers, from and to outlying cities in the county, via the CBD connector which is expected to open in 2019.

I have a few comments on certain aspects of the downtown connector as follows; with some modifications of things I said in the recent public meetings.

1

STATIONS

Of the four downtown connector stations listed earlier, now I understand that one of the four (either 5th or 2nd /3rd and Flower) might have to be dropped (at least for initial operations, anyway) for reasons of available funding. Although I was rather lukewarm about the need for the 5th and Flower station at one of the public meetings, upon thinking this one through I

2

now favor the 5th Street station (perhaps 5th to 6th street), in part because it would serve the main downtown library, and in part because of the steep hill linking a 2nd/3rd Street station with the Disney facility, Music Center, DWP, and so forth (I suspect many people, not just the elderly and handicapped) would prefer a small shuttle bus, which could start at 5th or 6th, to go up and down this hill. 2 cont'd

I support the 2nd Street station east of Bunker Hill without a specific preference between Broadway, Spring, or Main; and the 2nd-1st Street underground station for Little Tokyo. 3

POCKET TRACKS

The red/purple lines have a combined pocket track west of Alvarado, in occasional use, and are able to use the major maintenance facility east of Union Station for other such needs. The Blue Line has two end tracks along Flower north of 7th, allowing room for two x three-car trains. There has been speculation that when the Exposition Line opens, there may be inadequate storage space in this area. With the downtown connector, this may be somewhat less of a problem, although there will be trains coming in from Gold Line routes (perhaps one to receive a different color designation) from the east side of the CBD.

My question is whether a single pocket track will suffice (for a single 3-car train or allowing two such consists in a row) in a center section south or north of 5th Street (cut-and-cover?), or whether a second center-section pocket track (bored tunnel?) would also be needed along 2nd, west of the Little Tokyo underground station? 4

STATION DECORATIONS/ART-WORK

This project should be a transit "showcase" in this arena. We may have an opportunity to improve over some of the station art-work in place at some of the existing rail stations, such as the Red/Purple Line from the CBD to Vermont Avenue. (Some of the Red Line stations in the Hollywood/North Hollywood sections have much more impressive station art). Improved station art has been going in at Blue Line and Green Line stations "after the fact" which is understandable; an interesting example of rather extensive science-fiction movie 'artwork', now being colorized, exists at the Blue Line level at 7th/Metro Center in the CBD (I am still occasionally photographing some of these small pictures!).

I have provided some comments on possible station art subjects in Appendix A as there may be some interest in it, though perhaps doesn't require major elaboration at this point in the EIS/EIR, other than reference to the "transit showcase" concept. 5

FUTURE STATUS OF THE PRESENT SURFACE TRACKS FROM UNION STATION TO LITTLE TOKYO AND BOYLE HEIGHTS

Although in verbal comments on the Regional Connector project I have supported retaining the present Gold Line trackage linking the east end of Little Tokyo with Union Station to the north and Boyle Heights/East LA to the east, I recognize there are a number of drawbacks to retaining this short rail link, during and after construction/completion of the downtown connector.

Partial positive features had included a maintenance link to the facility north of Chinatown (of more use to East LA runs, than future runs from the other direction); possible use as a pocket track (though it would not be as useful as a pocket track in the tunnel); possible special service runs from East LA to Pasadena without the need for passengers to transfer at a tunnel station; and the fact that the MTA does own the track in this location. 6

But a negative feature would be that it may be more difficult to retain this when the double track portals north along Alameda and east along 1st are installed, with the likely widening of Alameda Street (and possibly parts of 1st Street). Retaining this surface track from north to east would likely require moving parts of the surface track to the east of the Alameda segment, possibly allowing utility of only a single track where we now have a double track with a station.

With regard to passenger transfers from what is now the Gold Line from the east, to the Gold Line north at the Little Tokyo underground station, possibly to access the Red Line or Metrolink at Union Station; I note that in Boston the MBTA regards a transfer from rail to rail to rail in their CBD area to be very common for transit riders, being much less annoying than transfers say, from bus to bus to bus. So, passenger movements using the downtown connector for transfers at the new Little Tokyo subway station, to get from East LA to Pasadena or Union Station, may be much less of a problem than I had previously thought. 7

At present, the surface station on the 1st/Alameda link east of Little Tokyo involves two car trains every five minutes (10 min. west/north and 10 min. south/east), with probably few major complaints. However, as we move on towards 2019, what would be the local reaction of pedestrians trying to cross Alameda if there are train movements here every two or three minutes, with three car trains? 8

And another consideration that could impact both elimination of this surface track or its long-term retention, is how to maintain service to Little Tokyo before the portals open to the north and the east? 9

It looks as though to save this surface track, it would probably have to be moved over, and probably shortened to only two car service at the surface station where the tunnel trains approach the portal/the surface near Temple at the north end of the present station. A question here is, how long it will take to construct each portal? A link from single track to 10

the subway double tracks north to Union Station and east to Boyle Heights would probably require a switch to one track, with a diamond allowing the surface trains to also go over that track and switch to the other track; with improvements to the signaling system and at least gates over the westbound 1st street traffic. Do-able, but it might actually be easier to eliminate the surface link altogether. 10 cont'd

Although I hate to see even short rail links removed, there are always alternatives. For the period when the downtown connector tunnel portals are constructed, it may instead be possible to install a short-term bus shuttle linking the Gold Line Mariachi Plaza station with a stop at Little Tokyo (1st and Alameda), and then on to Union Station, with a stop at the Gold Line run down from Pasadena. If this were done it would be advisable to have articulated buses (maybe with two front doors in addition to double center and double rear doors), provided with traffic signal interconnects to that they would be delayed less by street traffic; and if possible even some bus lane segments to speed up service for this short term period. 11

Of course, the Pasadena Gold Line service south to Union Station would not be impacted; the impacts would be on the Gold Line from East LA to the west. If this kind of service modification were implemented, it would of course be necessary to inform affected passengers that it would be only a short term solution, to be withdrawn when the LRT connector service becomes operational. 12

OTHER POSSIBLE TRANSIT LINKS/CONNECTIONS

If a downtown streetcar line is installed along Broadway or a parallel street running north/south and passing the 2nd street Regional Connector station, it could be viewed as a beneficial transit link, allowing among other things a connection south to the Garment District and north to 1st Street and the Disney and Music Center facilities. I am guessing that 4-axle, 3-section low floor articulated streamlined cars would be used; though possibly also some single section, 4 axle vintage car designs. In any case, I believe with a run up the 1st street hill, all the axles should be powered so that this unique downtown service would not be impaired by a steep gradient on that hill. 13

Sincerely

Alan D. Havens

Comments on the Draft EIR/EIR
For the Regional Connector Transit Corridor Study

APPENDIX A
STATION DECORATIONS/ART-WORK

In regard to the Regional Connector, it is possible that station art themes relating to the west side of downtown Los Angeles, including library, literary and educational subjects, among others, might be focused on at a 5th Street station; and that the 2nd Street station east of Bunker Hill and south of the Los Angeles City Hall might have art work focusing on, at least partially, themes relating to the history of the City of Los Angeles and Los Angeles County.

At one or more points on the tunnel walls between stations, the recent concept of moving lights that parallel the speed of a train could be employed, providing a little bit of interest for passengers looking out of the train windows, where it would otherwise be just blackness. I believe that this has been used in at least one transit system somewhere else in the world, I do not recall exactly where. 14

Of course, other kinds of stationary colored light displays could be installed in stations, not limited to neon lights and including various moving pictorial displays.

I have already suggested that the Little Tokyo underground station could warrant a variety of themes, which might include the famous Mineki Neko cats and oriental dragons, which are both good luck symbols; and some scenes from old Japan, which would include Samurai warriors in armor from the 1500's or later, and Japanese musketeers from the same period (many people don't know that they existed!). Not seen very often are crabs with "human faces" on their backs, which are revered in respect to drowned warriors after a famous naval battle of roughly the same period.

Dr. Kohei Yoshida ("Sensei Yoshida") who owned a Japanese armor and sword museum, told me years back that the Naginata, a pole with a curved blade at the end, was especially a women's weapon on ancient Japan—when their menfolk were called to local military use in Japan, the women of the villages had to defend themselves from marauding bandits on horseback, and often took up the Naginata.

Any of these natural or historical subjects, and many others including botanical themes, might be usable for station art in this location, using not a single artist, but a number of local artists especially from Little Tokyo or elsewhere in the LA area.

Regarding recent technology from Japan, it might be useful to display photos of the famous Shinkansen or bullet trains, for which there are at least four or five designs of electric locomotives; and also some moderately high speed narrow gauge passenger trains. The relevance to what is happening today in LA and other parts of California is obvious, as we are now looking at high speed trains operating in this state, coming right through downtown.

And, many people may have forgotten that in Los Angeles, the first modern light rail vehicles for use on our regional system were built in Japan by Sumitomo/Nippon Sharyo, after the "light rail revolution" spread from Europe to the US, Japan, and many other parts of the world. These LRVs still run on the Long Beach Blue Line, but may or may not be still in use by the time the Regional Connector will come through (they may by then be used for rush hour or special service only, or only found in a transit museum!). The one I just rode on was labeled as arriving here in 1994, still a comfortable ride after all these years. 14 cont'd

So, another possible 'modern technology' candidate for display at the Little Tokyo station would be a model replica of one of these original Nippon Sharyo cars, with an elaborate roof-top design and the first colorful paint scheme used on the Long Beach Blue Line, which was red, two-tone blue, white, and black.

The above are possible items that might be included in light rail underground station and tunnel artwork that come to mind at present. I am not recommending any specifics, as in most cases, artistic displays will not be developed in detail until the transit facility is adopted, designed, and even after it has begun construction.

But, I recommend that likely candidates for station displays should be considered fairly early in the game as the Regional Connector is developed, with a particular focus on a number of artists and art organizations, and considerable local input.

Alan D. Havens, Ph.D.
Transit Advocate

DEAR MS. ROYBAL SCHARFF,

THOUGH I SENT THE ORIGINAL OF THIS 8/15, I AM UNSURE OF THE RELIABILITY OF MY LOCAL POST OFFICES 3RD/WESTERN AND 6TH/HARVARD HAVE BEEN KNOWN RECENTLY TO RETURN LETTERS/CHECKS TO ME, IN POOR CONDITION CHECK SENT TO EAST COAST THAT SHOULD HAVE GONE TO NEVADA; CHECK MANGLED; LETTERS RETURNED THAT THEY SHOULD HAVE KNOWN WENT TO CORRECT ADDRESS

SO THIS ONE I AM HAND DELIVERING TODAY TO MOB OFFICE, OR LAST RESORT.

PLS CARD IF THE ORIGINAL ACTUALLY DID GET THROUGH!

Thank You!

PC70

Responses to Comments from Havens, Alan

Response to Comment PC70-1

Thank you for your comment. Support for an underground option is noted. The Metro Board of Directors voted on October 28, 2010 to designate the Fully Underground LRT Alternative as the Locally Preferred Alternative.

Response to Comment PC70-2

Support for the Flower/5th/4th Street station is noted. The Metro Board of Directors voted on October 28, 2010 to designate the Fully Underground LRT Alternative without the Flower/5th/4th Street station as the Locally Preferred Alternative. The deletion of the station was done in an effort to reduce the cost of the project while still meeting the project's purpose and need. An enhanced pedestrian walkway connecting the 4th/Flower Streets area to the existing 7th Street/Metro Center Station would be constructed on Flower Street to improve access to the Financial District. Metro understands the importance of serving the Financial District and believes that the Locally Preferred Alternative still meets the purpose and need of the project despite the station deletion. Deletion of the Flower/5th/4th Street station would result in minimal ridership losses because most riders would use the 2nd/Hope Street station or 7th Street/Metro Center Station, which would service the Financial District. After the October 28, 2010 meeting, the Metro Board of Directors directed staff to meet with the Financial District stakeholders to discuss options for privately funding the Flower/5th/4th Street station, but no funding sources were identified. However, the design of the Locally Preferred Alternative would not preclude a station at 5th and Flower Streets from being built as a possible future, separate project. The Broad Art Foundation Museum, currently under construction, is projected to include a plaza above General Thaddeus Kosciuszko Way connecting to Upper Grand Avenue. In order to provide access from the 2nd/Hope Street station to Upper Grand Avenue, an elevator would be built as part of the Locally Preferred Alternative from the station entrance to the plaza if one is not already provided. However, if the plaza is not built as part of the Broad Art Foundation Museum, a pedestrian connection would be built as part of the Locally Preferred Alternative from the elevator to Upper Grand Avenue. Under either scenario, riders would be able to easily access the top of Bunker Hill.

Response to Comment PC70-3

Support for stations on 2nd Street east of Bunker Hill and in Little Tokyo is noted. The Metro Board of Directors voted on October 28, 2010 to designate the Fully Underground LRT Alternative as the Locally Preferred Alternative, which includes stations at 2nd and Broadway and on the northern portion of the block bounded by 1st Street, Central Avenue, 2nd Street, and Alameda Street in Little Tokyo.

Response to Comment PC70-4

Metro's operations staff has determined that the single pocket track underneath Flower Street would be sufficient.

Response to Comment PC70-5

Metro will work with the community to develop station artwork that enhances the transit experience for passengers and contributes meaningfully to the urban environment. One-half of one percent (0.5 percent) of the project's construction budget will be dedicated to public art.

Response to Comment PC70-6

Comment noted. The surface tracks would no longer be in service once the Regional Connector opens, and may ultimately be removed.

Response to Comment PC70-7

Comment noted. Direct Red Line transfers for passengers traveling from East Los Angeles would also be possible at 7th Street/Metro Center Station.

Response to Comment PC70-8

Rush hour Metro Gold Line headways are currently 7.5 minutes in each direction (averages 3.75 minutes combined). The surface tracks along Alameda Street would no longer be in service once the Regional Connector opens; therefore, pedestrian movements across Alameda Street would no longer be limited by passing trains.

Response to Comment PC70-9

Temporary surface track would be installed in the vicinity of 1st and Alameda Streets to allow Metro Gold Line service to run during construction.

Response to Comment PC70-10

Comment Noted. Some reconfiguration of the surface tracks around the existing Little Tokyo/Arts District Station would be needed to maintain Metro Gold Line service during construction. Portal construction would take approximately 12 to 24 months for each portal, as was shown in Table 4.18-2 of the Draft EIS/EIR and Table 4.18-1 of this Final EIS/EIR. Construction of the two portals could be done simultaneously to reduce the overall construction time. Some single tracking would be needed.

Response to Comment PC70-11

Metro would maintain Metro Gold Line service during the construction phase of the project, though two primary closures of the tracks around the existing Little Tokyo/Arts District station would be needed lasting up to six weeks each. Bus bridge substitution would be needed during these times. Bus size and configuration would be selected based on ridership demand. Metro would attempt to minimize passenger delays. As with any existing operating lines, maintenance of tracks and overhead power lines may result in incidental service interruptions along the Metro Gold Line during construction. Metro will attempt to minimize closures and shorten the overall project construction schedule in order to reduce customer inconvenience. Additional information is provided in Section 4.18.2.6.1 of this Final EIS/EIR.

Response to Comment PC70-12

Metro would inform Gold Line passengers in advance of scheduled service disruptions and provide alternate transit service.

Response to Comment PC70-13

Comment acknowledged.

Response to Comment PC70-14

Metro appreciates the detailed suggestions for station artwork. Metro will actively engage the community when developing station artwork.

Los Angeles, CA 90012

RE: Comments on Draft EIS/EIR for Regional Connector

Dear Ms. Roybal-Saltarelli:

As a resident of Savoy on the corner of 1st and Alameda Street, I would like to formally support the **Fully Underground Alternative** that was added to the draft EIS/EIR as the only truly viable build option for this community. I agree with the team's recommendation and endorsement of the Fully Underground Alternative as the "locally-preferred" alternative. 1

I also want to voice my concerns about construction, traffic, and related impacts on residents as the project moves forward. I ask the MTA to work to protect the vibrancy of this community through mutual cooperation and adequate mitigation measures. 2

Thank you for your consideration.

Sincerely,

Christina Sein
Savoy Resident
Unit # 305

PC71

Responses to Comments from Sein, Christina

Response to Comment PC71-1

Thank you for your comment. Support for the Fully Underground LRT Alternative is noted. The Metro Board of Directors voted on October 28, 2010 to designate the Fully Underground LRT Alternative as the Locally Preferred Alternative.

Response to Comment PC71-2

Comment acknowledged. Traffic and construction impacts associated with the Locally Preferred Alternative were discussed in Chapter 3, Transportation Impacts and Mitigation, and Section 4.18, Construction Impacts, of the Draft EIS/EIR and this Final EIS/EIR. Metro has coordinated with the Little Tokyo community throughout the design and environmental process of this project. For example, Metro has assisted the community in establishing the Little Tokyo Working Group, provided funding for a consultant to assist the community in understanding the potential project impacts during preparation of the Draft EIS/EIR, and coordinated with community groups during preparation of this Final EIS/EIR. Metro will continue to coordinate with the community during project construction, which will include the development of a community outreach plan to notify local communities of construction schedules, street lane and sidewalk closures, and detours. Appropriate candidate mitigation measures identified in the Draft EIS/EIR have been refined and confirmed in this Final EIS/EIR and the Mitigation Monitoring and Reporting Program for the Locally Preferred Alternative (Chapter 8).

October 14, 2010

Dolores Roybal Saltarelli, Project Manager, Metro
One Gateway Plaza, MS 99-22-2
Los Angeles, CA 90012

Dear Ms. Roybal Saltarelli,

Please allow me to add to my verbal remarks during Regional Connector meetings and emphatically support the "fully underground" option for the Connector. 1

I wish Metro saw fit to adopt the suggestion of Alan Fishel to align the Connector on a much faster curve east of the the aerial structure currently used by the Gold Line at Alameda St. and the 101 Freeway. His suggestion would return the street frontage along Alameda St. to the planned residential project that would abut the current Little Tokyo Gold Line station. 2

I think the relatively few people who have supported any Central Library station at Fifth and Flower Sts. do so only for personal convenience, neglecting the prime fact that the 7th/Metro station on 7th St. is indefensibly close to that proposed location. I realize that federal requirements can mandate a minimum of three stations in order to best qualify the project for funding but the proposed stations are so numerous and close together than the bulk of the Connector's riders would be better served by only a Broadway station being built. I'm sure the Connector will be quickly if not instantly so useful, so badly needed, that it would have been best to design it as only half of a total of four tracks from Alameda St. to past its 7th/Metro station junction, and all the way down to Flower St. and Washington Blvd. Maybe a pair of four such tracks would be further underground, to permit two tracks in each direction to run side by side, and best accommodate the crowds I'm sure will find it necessary to use the connector. 3

The Regional Connector is so critical to making transit more useful, it would so greatly change the ability of rail transit to assume its proper and long overdue role of best moving around greater Los Angeles. It may not have been as critical to our county as the Long Beach Blue Line since the Blue Line got us to awaken to how important a responsible system of rail transit is to so large an area as metropolitan Los Angeles. Because of this vital lack that the Regional Connector would go so far to help fill, thank you most kindly for your 4

significant and most welcome way you've ran the public Regional Connector meetings, it's much appreciated. 4 cont'd

Sincerely,

Dave Frevele

PC72

Responses to Comments from Frevele, Dave

Response to Comment PC72-1

Thank you for your comment. Support for the Fully Underground LRT Alternative is noted. The Metro Board of Directors voted on October 28, 2010 to designate the Fully Underground LRT Alternative as the Locally Preferred Alternative.

Response to Comment PC72-2

This proposal would involve additional impacts to the City of Los Angeles Department of Water and Power property, which can be mostly avoided with the Locally Preferred Alternative alignment.

Response to Comment PC72-3

Preference for the removal of the Flower/5th/4th Street station is noted. The Metro Board of Directors voted on October 28, 2010 to designate the Fully Underground LRT Alternative without the Flower/5th/4th Street station as the Locally Preferred Alternative. An enhanced pedestrian walkway connecting the 4th/Flower Streets area to the existing 7th Street/Metro Center Station would be constructed on Flower Street to improve access to the Financial District. Three stations are included in order to fulfill the project goal of expanding rail transit coverage of downtown Los Angeles. Ridership modeling shows that a two-track connector would provide sufficient capacity to accommodate demand. However, the design of the Locally Preferred Alternative would not preclude a station at 5th and Flower Streets from being built as a possible future, separate project.

Response to Comment PC72-4

Thank you for your comment.

Subject: Regional Connector Transit Corridor - opinion

To whom it may concern,

I am writing today to voice my opinion about the Regional Connector Transit Corridor project being planned right now by Metro. I am very concerned and dismayed to hear that Metro is even considering an above-ground option for this line.

Being a resident of downtown and a frequent patron of businesses in and around the Little Tokyo area, I can state that this above-ground option would have a very negative impact on not only traffic, but surrounding businesses as well. I have been to some of the planning meetings, and viewed the diagrams of the various route options.

The above-ground option would completely change the historic and unique look of this area, permanently degrade property value around it, and create very undesireable living conditions for neighboring residents.

As I'm sure you know, Downtown Los Angeles has in recent years undergone an unprecedented revival! More people are living in and doing business in Downtown that many ever thought was possible. Being a life-long resident of Los Angeles County, this has been amazing to witness, as well as be a part of now that I live in Downtown.

I urgently and strongly request that you consider what this great city is becoming, and still has the potential to become if the city planners do this project correctly, and consider the many concerns of it's residents and businesses. We do not need additional above-ground rail systems, or anything that will give our city a more congested look and feel. 1

We need to consider our historic roots, and realize that our city's buildings, streets, and its unique look are what make it a place of amazement and destination that everyone wants to visit and be a part of. We should make every attempt to make improvements to transportation as non-disruptive as possible.

Please, help us keep the historic look of downtown and Little Tokyo! Please consider the long-term consequences of your decisions. And mostly, please listen to the many voices of the concerned residents and businesses of this area who want only to keep this a great city to be proud to live and work in.

I strongly feel that the above-ground option should NOT be even be in consideration, and that any amount of extra money spent to make this Metro below ground will pay off in dividends for all future residents, business, and visitors.

Thank you for reading this. I'm sure that for every one person like me who expresses this feeling in writing, there are dozens more who also feel this way without being heard.

Sincerely,

Phil Orona
Higgins Building Resident

Responses to Comments from Lin, Susan

Response to Comment PC75-1

Thank you for your comment. Support for the Fully Underground LRT Alternative is noted. The Metro Board of Directors voted on October 28, 2010 to designate the Fully Underground LRT Alternative as the Locally Preferred Alternative.

Response to Comment PC75-2

Comment acknowledged. Traffic and construction impacts associated with the Locally Preferred Alternative were discussed in Chapter 3, Transportation Impacts and Mitigation, and Section 4.18, Construction Impacts, of the Draft EIS/EIR and this Final EIS/EIR. Metro has coordinated with the Little Tokyo community throughout the design and environmental process of this project. For example, Metro has assisted the community in establishing the Little Tokyo Working Group, provided funding for a consultant to assist the community in understanding the potential project impacts during preparation of the Draft EIS/EIR, and coordinated with community groups during preparation of this Final EIS/EIR. Metro will continue to coordinate with the community during project construction, which will include the development of a community outreach plan to notify local communities of construction schedules, street lane and sidewalk closures, and detours. Appropriate candidate mitigation measures identified in the Draft EIS/EIR have been refined and confirmed in this Final EIS/EIR and the Mitigation Monitoring and Reporting Program for the Locally Preferred Alternative (Chapter 8).

Subject: Draft EIS/EIR Comments

Dear Dolores Roybal Saltarelli

My name is Yukio Kawaratani, former Downtown Redevelopment Planner. I spoke at the Regional Connector public hearing at JANM on September 28, 2010. I emphasized the need for a compensation fund to keep Little Tokyo businesses alive during the four year construction period. 1
I also said that the Draft EIR/EIS did not adequately address the major adverse impacts and safety concerns regarding the Underground Emphasis Alternative and why it cannot be accepted by the Little Tokyo and Japanese American communities. 2

Attached are my additional comments to the Draft EIS/EIR regarding the existing Little Tokyo/Arts District Station, the starting end of the tunneling, and the Office Depot block joint development. Note: To assure receipt of my comments, I will also mail them to you.

Best --

Yukio Kawaratani, former downtown redevelopment planner
1332 Grandridge Avenue, Monterey Park, CA 91754

REGIONAL C...doc (28.5 KB)

REGIONAL CONNECTOR -- DRAFT EIS/EIR COMMENTS 10/14/10

BY YUKIO KAWARATANI, Former Downtown Redevelopment Planner

LITTLE TOKYO/ARTS DISTRICT STATION

I realize the desire to keep this station in operation as long as possible.
However, there will be four or more unavoidable periodic disruptions to service:

- o During construction of the 3 way junction under the First and Alameda intersection.
- o During construction of the tracks around the First Street portal.
- o During construction of the First Street portal.
- o During demolition and reconstruction of the connecting track structure to over the 101 Highway.

I recommend providing continuous uninterrupted operation of the Little Tokyo/Arts District Station and tracks to Pasadena and East LA until the last 8 months of construction of the total project. (Note: There will be a 4 months or more stop in operation in the Station anyway).

Under this recommendation, all Regional Connector construction affecting the operation of the Station would be postponed until the last 20% of the overall project. Advantages:

- o No intermittent interruption of service to the Gold Line to East LA or Pasadena.
- o Just a little longer closure at the end of the Regional Connector project.
- o No need to purchase land from the Nikkei Center or the LADWAP.
- o Use cheaper cut and cover construction for the tunnel in the existing station area.
- o Would directly align with the existing tracks and structure going over the 101 Freeway, thereby avoiding a permanent "S" curve in the connecting tracks.

3

STARTING END OF THE TUNNELING

The Little Tokyo Community and especially the many businesses will already be disproportionately adversely affected during construction of the Regional Connector project.

Fairness and justice should mitigate against starting the tunneling at Second Street and Central Avenue. Little Tokyo will already suffer from the loss of businesses and property on the Office Depot block. In addition, will be the significant consequences of the enormous dirt haling and construction materials and construction activities of the new station, Alameda and First Street junction intersection, and tunnels and portals to connect to the Pasadena and East Los Angeles lines.

4

Adding to this, many trucks hauling millions of cubic feet of earth from the mile long tunnels and delivering materials for the construction of the tunnels and tracks would be an intolerable impact on Little Tokyo business that could not be adequately mitigated. With access problems discouraging customers, many of them will be forced to abandon their businesses. In a recent public meeting on the Regional Connector, many of the businesses opted for the "No Build" alternative. They are rightfully very concerned.

4 cont'd

The Second/Third and Flower site for starting tunneling has the Central Plant landscaped area and The Flower/Hope interchange to work for tunneling and truck hauling of dirt and supplies. There are no nearby retail businesses to impact. Traffic is light except during the morning and evening rush hour. There is limited traffic during the weekends.

Flower/Hope Street could remain in operation. The interchange with Kosciuszko Way will have to be closed anyway to excavate and construct the Bunker Hill Station.

This would also be a convenient location from which to tunnel Flower Street down to the Seventh Street Station.

OFFICE DEPOT BLOCK DEVELOPMENT

The optimum development and design of this block requires a carefully orchestrated joint development agreement. It would integrate the Station and development design to the benefit of Little Tokyo for the next 100 years.

To accomplish this desired goal, it is essential that the MTA purchase, relocate and demolish all businesses, buildings and properties on the Office Depot block.

5

To cater to the desire of a few property owners to retain ownership of property, buildings and businesses on the block would not be in the best interests of Little Tokyo in the short and more importantly in the long run.

The Regional Connector will require cut and cover construction for the Station, the junction under First and Alameda Streets, and the tunnel connecting them.

To try to save a few buildings, underpin them and maintain the businesses in operation during up to 4 years of construction would be folly. The uses are nearly all restaurants, including outdoor dining and surface parking. How can the contractor keep them dust, safety, vibration and noise free for four years? The contractor must secure the entire block free of contingencies and problems. Also, he can use the remainder of the block for heavy machinery, construction supply storage, offices and parking to major advantage and thereby reduce the construction cost of the Regional Connector Project.

Good coordinated development will be impossible to achieve after construction of the Station and tunnels if fragments of properties and buildings are preserved, thereby missing an opportunity and adversely impacting Little Tokyo into the future.

This new station, with direct ties to and from the four points of the region, will be a strong economic stimulus for Little Tokyo. It needs a direct pedestrian portal to First Street, the most important street in Little Tokyo.

Development of this block with continuous street frontage retail uses along First, Second and Central Avenue is essential to integrate it in a positive way with the rest of Little Tokyo.

Development of the upper levels of the block should be primarily residential and office uses, but at a density and heights compatible with adjacent Little Tokyo development.

The block development needs to also provide and be a resource for the over all parking needs of Little Tokyo. If the site is fragmented, this essential parking will be nearly impossible to be built on the block.

5 cont'd

PC76

Responses to Comments from Kawaratani, Yukio

Response to Comment PC76-1

Metro intends to work with the Little Tokyo community to support businesses throughout the construction phase of the project. Targeted marketing efforts and other technical assistance are included as confirmed mitigation measures in the Mitigation Monitoring and Reporting Program for the Locally Preferred Alternative (Chapter 8) of this Final EIS/EIR. Construction durations for the Fully Underground LRT Alternative were shown in Table 4.18-2 of the Draft EIS/EIR and for the Locally Preferred Alternative in Table 4.18-1 of this Final EIS/EIR. The entire construction process would take four to five years, but the duration of construction in any one location in Little Tokyo would be less than four years.

Response to Comment PC76-2

Impacts associated with the Underground Emphasis LRT Alternative were adequately analyzed in accordance with NEPA and CEQA in Chapter 3, Transportation Impacts and Mitigation, and Chapter 4, Environmental Analysis, Consequences, and Mitigation, of the Draft EIS/EIR and this Final EIS/EIR. Safety impacts associated with the Underground Emphasis LRT Alternative were also adequately analyzed in Section 4.15, Safety and Security, of the Draft EIS/EIR and this Final EIS/EIR. The commenter mentions comments made during the public hearing held on September 28, 2010. Please refer to Responses to Comments PHA10-1 through PHA10-9, below, for detailed responses regarding concerns raised by the commenter during the public hearing. The Metro Board of Directors voted on October 28, 2010 to designate the Fully Underground LRT Alternative as the Locally Preferred Alternative.

Response to Comment PC76-3

Metro will maintain continuous Metro Gold Line service between Union Station and East Los Angeles to the maximum extent feasible during construction. Metro would maintain Metro Gold Line service during the construction phase of the project, though two primary closures of the tracks around the existing Little Tokyo/Arts District station would be needed lasting up to six weeks each. Bus bridge substitution would be needed during these times. As with any existing operating lines, maintenance of tracks and overhead power lines may result in incidental service interruptions along the Metro Gold Line during construction. Metro will attempt to minimize closures and shorten the overall project construction schedule in order to reduce customer inconvenience. Additional information is provided in Section 4.18.2.6.1 of this Final EIS/EIR.

The Mangrove property, the vacant property at the northeast corner of 1st and Alameda Streets, would need to be acquired for tunnel boring machine staging. Cut and cover and open cut construction methods would be used for the alignment segments in the vicinity of the 1st and Alameda Streets junction. Metro would ensure operability of the connection to the bridge over the US 101 Freeway.

Response to Comment PC76-4

Comment acknowledged. As indicated in Section 4.18, Construction Impacts, of the Draft EIS/EIR and this Final EIS/EIR, a range of durations, 2-4 months for preparation of the TBM insertion site and 24-48 months for the 2nd Street TBM tunnel, was assumed for tunneling

activities at both insertion site options. These ranges are conservative estimates. Disproportionate impacts associated with each alternative were discussed in Section 4.17, Environmental Justice, of the Draft EIS/EIR and this Final EIS/EIR.

The small size of the 2nd/Hope Street station site would require a substantial portion of construction staging activities to occur in the surrounding streets, necessitating longer downtown street closures and increased cut and cover activities. This would have the effect of reducing mobility downtown and could deter visitors from frequenting many downtown communities, including Little Tokyo. In addition, the 1st/Central Avenue station site in Little Tokyo would need to be used as the TBM receiving site if the tunnel boring machines are inserted at the 2nd/Hope Street station site.

Based on comments received on the Draft EIS/EIR and input received from community meetings held during preparation of this Final EIS/EIR, the TBM insertion site options at 2nd/Central Avenue station and the 2nd/Hope Street station are no longer being considered. Instead the vacant property at the northeast corner of 1st and Alameda Streets, formerly known as the Mangrove Site, would be used as the insertion site. The TBM would be inserted approximately 700 feet from the originally proposed 2nd/Central Avenue insertion area, which would reduce the intensity of construction on the block bounded by 1st Street, Central Avenue, 2nd Street, and Alameda Street and result in fewer acquisitions. Tunnel boring activities from this site would proceed farther down Flower Street to 4th Street, instead of ending at the proposed 2nd/Hope Street station. Spoils would be removed within the Mangrove property, and trucks would be routed to the east and/or north to reach the freeway, and would not pass through Little Tokyo. Section 4.18, Construction Impacts, of this Final EIS/EIR contains further detail regarding estimated construction durations, construction scenarios, and tunnel boring operations at the Mangrove property. Chapter 3, Transportation Impacts and Mitigation, and Chapter 4, Environmental Analysis, Consequences, and Mitigation, of the Draft EIS/EIR have been revised based on the new TBM insertion site in this Final EIS/EIR. A portion of the Mangrove property was identified for construction staging in the Draft EIS/EIR. Inserting the TBM at the Mangrove property would not result in new significant impacts or substantially increase the severity of impacts previously identified in the Draft EIS/EIR.

Worksite Traffic Control Plans will be developed in coordination with the Los Angeles Department of Transportation and presented to the community prior to construction activities. Metro will provide the community with updates regarding the construction schedule prior to and during construction.

Response to Comment PC76-5

Metro has refined the Locally Preferred Alternative and reduced the need for acquisitions on the block bounded by 1st Street, Central Avenue, 2nd Street, and Alameda Street. Only the northern portion of the block would need to be acquired. Consistent with the community's request that Metro minimize business acquisitions, Metro does not plan to acquire the entire block. Metro will implement the mitigation measures in the Mitigation Monitoring and Reporting Program for the Locally Preferred Alternative (Chapter 8) of this Final EIS/EIR to minimize dust, safety, vibration, and noise impacts throughout the construction process. Other construction staging areas farther from the center of Little Tokyo have been identified for contractor use. Metro believes that focusing construction staging activities away from the center of Little Tokyo would

reduce community impacts. Metro intends for any future development projects to be integrated with existing community businesses and resources. Preference for a station entrance on 1st Street, street-fronting retail, upper level residential and office uses, and additional parking is noted.

How will the regional connector connect with the Gold Line?] 1

PC77

Responses to Comments from Davidson, Christopher

Response to Comment PC77-1

The Regional Connector would connect with the Metro Gold Line via two new portals: one northeast of Temple and Alameda Streets, and one in the median of 1st Street just east of Alameda Street. This connection was described in greater detail in Section 2.3.6 of the Draft EIS/EIR and this Final EIS/EIR.

Dolores Roybal Saltarelli,
Project Manager, Metro,
1 Gateway Plaza, MS 99-22-2,
Los Angeles, CA 90012

October 15, 2010

Dear Ms. Saltarelli,

1. Seniors want all the station signs and instructions in various languages/ English, Spanish, Japanese, Korean, including ticketing machines.
   Also the announcements of approaching train in Japanese and Korean will [1]

2. As residents of Little Tokyo and senior citizens, we want enforcement of the safety of Alameda St and 1st or 2nd during the construction years. Especially handicap access, rerouting bus route, detour, and please consider that a little bump on the street could be very crucial for seniors and disabled people. [2] Also please post or announce the re-routing or road closures in Japanese and Korean in a timely manner.. [3]

3. Seniors want to be able to have good air quality during construction. If they won't be able to open windows because of the dust, seniors want metro to install AC or air filters. [4]

4. Please let the seniors know where and how to complain during construction when something come up. [5]

PC78

Responses to Comments from Yasuda, Hiroko

Response to Comment PC78-1

Metro already has some signage in English, Spanish, Japanese, and Chinese at selected stations. Metro is exploring the addition of more languages to ticket vending machines and train announcements.

Response to Comment PC78-2

Appropriate candidate mitigation measures included in Chapter 3, Transportation Impacts and Mitigation, and Section 4.15, Safety and Security, of the Draft EIS/EIR and confirmed in the Mitigation Monitoring and Reporting Program for the Locally Preferred Alternative (Chapter 8) of this Final EIS/EIR include coordination with the City of Los Angeles and potentially affected transit operators, relocation of bus stops, providing alternate walkways for pedestrians around construction staging sites in accordance with Americans with Disability Act (ADA) requirements, and signage properly marking all pedestrian detour locations around staging sites in accordance with applicable local and state requirements. These mitigation measures would reduce safety impacts associated with project construction to the maximum extent feasible. As indicated in the Draft EIS/EIR and this Final EIS/EIR, safety impacts during construction of the Locally Preferred Alternative would be reduced to less than significant with incorporation of mitigation.

Response to Comment PC78-3

Comment Acknowledged. Metro will translate notices of detours or road closures into appropriate languages, which has been included in the following mitigation measure identified in Section 4.15.4.2, Safety and Security, and the Mitigation Monitoring and Reporting Program for the Locally Preferred Alternative (Chapter 8) of this Final EIS/EIR.

- Metro shall develop a Construction Mitigation Program that includes protocol for community notification of construction activities, including traffic control measures, schedule of activities, and duration of operations, with written communications to the community translated into appropriate languages.

Response to Comment PC78-4

As indicated in Section 4.5, Air Quality, and Appendix Q, Air Quality Impacts and Health Risk Assessment Technical Memorandum, of the Draft EIS/EIR and this Final EIS/EIR, the Locally Preferred Alternative would not result in adverse impacts associated with PM_{10} or $PM_{2.5}$ emissions during construction with implementation of mitigation.

Dust emissions and dirt track-out will be minimized during construction through compliance with SCAQMD Rule 403. Projects are required to follow all of the Best Available Control Measures described in the rule. The following are several key measures applicable to this project:

- For cut and fill at large sites, pre-water with sprinklers or water trucks and allow time for penetration.
- Apply water or stabilizing agent in sufficient quantities to prevent the generation of visible dust plumes.
- Track-out shall not extend 25 feet or more in cumulative length from the point of origin from an active operation. All track-out from an active operation shall be removed at the conclusion of each workday or evening shift.

If the disturbed surface area is five acres or more, or if the daily import or export of bulk material is 100 cubic yards or more, then at least one of the following precautions must also be taken:

- Install a pad consisting of washed gravel (minimum-size: one inch) maintained in a clean condition to a depth of at least six inches and extending at least 30 feet wide and at least 50 feet long.
- Pave the surface extending at least 100 feet and at least 20 feet wide.
- Use a wheel shaker/wheel spreading device consisting of raised dividers at least 24 feet long and 10 feet wide to remove bulk material from tires and vehicle undercarriages before vehicles exit the site.
- Install and use a wheel washing system to remove bulk material from tires and vehicle undercarriages before vehicles exit the site.

Therefore, dust will not affect sensitive receptors adjacent to the Locally Preferred Alternative construction area. In addition, a Metro staff member will be assigned and a 24-hour hotline number will be posted on signage along the perimeter of active project construction sites to address day-to-day issues. Notices will also be sent out to adjacent property owners, which will indicate the hotline number and Metro contact and will be translated into appropriate languages.

Response to Comment PC78-5

As indicated above, a Metro staff member will be assigned and a 24-hour hotline number will be posted on signage along the perimeter of active project construction sites to address day-to-day issues. Notices will also be sent out to adjacent property owners, which will indicate the hotline number and Metro contact and will be translated into appropriate languages.

October 15, 2010

Dear Ms. Saltarelli,

1. Seniors want all the station signs and instructions in various languages/ English, Spanish, Japanese, Korean, including ticketing machines.
   Also the announcements of approaching train in Japanese and Korean will [1]

2. As residents of Little Tokyo and senior citizens, we want enforcement of the safety of Alameda St and 1st or 2nd during the construction years. Especially handicap access, rerouting bus route, detour, and please consider that a little bump on the street could be very crucial for seniors and disabled people. [2] Also please post or announce the re-routing or road closures in Japanese and Korean in a timely manner.. [3]

3. Seniors want to be able to have good air quality during construction. If they won't be able to open windows because of the dust, seniors want metro to install AC or air filters. [4]

4. Please let the seniors know where and how to complain during construction when something come up. [5]

To: Regional Connector
Subject: Downtown Los Angeles Regional Connector Project

Dear METRO LA County MTA Decision-Makers:

The all-underground Regional Connector LRT alternative as currently planned, is an outstanding and, by far, the smartest option to select as the LPA. Please support the all-underground alternative. 1

Also, please doing everything possible to preserve the Fifth & Flower station. The immediate Fifth & Flower Street neighborhood contains an extraordinarily high concentration of potential ridership in the office towers, job centers & work place destinations. Together with the major hotels, conference facilities, retail & restaurant activity, as well as the great civic spaces around & within the Central Library and Bunker Hill, it would be a major mistake, and a probable loss of ridership, to cut out the Fifth & Flower Street station. Please keep it in the all-underground plan. 2

Thank you for late reminder to comment.
And thank you for creating what will be an outstanding, and as I like to call it, a "synergistic" addition to the entire regional transportation system. 3

Sincerely,
Michael S. Metcalfe
Principal

Responses to Comments from Metcalfe, Michael

Response to Comment PC84-1

Thank you for your comment. Support for the Fully Underground LRT Alternative is noted. The Metro Board of Directors voted on October 28, 2010 to designate the Fully Underground LRT Alternative as the Locally Preferred Alternative.

Response to Comment PC84-2

Support for the Flower/5th/4th Street station is noted. The Metro Board of Directors voted on October 28, 2010 to designate the Fully Underground LRT Alternative without the Flower/5th/4th Street station as the Locally Preferred Alternative. The deletion of the station was done in an effort to reduce the cost of the project while still meeting the project's purpose and need. An enhanced pedestrian walkway connecting the 4th/Flower Streets area to the existing 7th Street/Metro Center Station would be constructed on Flower Street to improve access to the Financial District. Metro understands the importance of serving the Financial District and believes that the Locally Preferred Alternative still meets the purpose and need of the project despite the station deletion. Deletion of the Flower/5th/4th Street station would result in minimal ridership losses because most riders would use the 2nd/Hope Street station or 7th Street/Metro Center Station, which would service the Financial District. After the October 28, 2010 meeting, the Metro Board of Directors directed staff to meet with the Financial District stakeholders to discuss options for privately funding the Flower/5th/4th Street station, but no funding sources were identified. However, the design of the Locally Preferred Alternative would not preclude a station at 5th and Flower Streets from being built as a possible future, separate project.

Response to Comment PC84-3

Thank you for your comment.

To: Regional Connector
Cc: Kerman, Ann
Subject: Public Comment Metro Regional Connector Project

My family has owned land in Little Tokyo for over 125 years. In fact my Great Uncle, James Davies, was the person who subdivided the SW corner of 1st and Alameda as well as much of what is Little Tokyo today..

Over the years, Little Tokyo has had its ups and downs. The greatest low point came in 1942 when the Japanese Americans were sent to Detention Camps. After World War II, the Japanese Americans gradually returned to this community .Thanks to their tenacity and hard work, the Little Tokyo economy has gradually prospered in spite of having a major portion of the land taken for Parker Center and other City facilities.

A major step forward was the creation of the Little Tokyo Community Redevelopment Project by CRA over 35 years ago. Under CRA auspices the west side of Little Tokyo has flourished thanks to such projects as the construction of the Sumitomo Bank Building and the New Otani Hotel. However, the east side continued to anguish. Central Avenue was all but vacant until it was widened about 15 years ago between 1st and 2nd Streets. Now with the construction of the Japanese American National Museum, the Office Depot project. numerous restaurants and a variety of condominium and apartment projects, this ares is flourishing. 1

The MTA proposal to take all of the Block bounded by 1st, Alameda, 2nd and Central for the Metro Regional Connector will be devastating to all of Little Tokyo. It will totally disrupt traffic for the 4 plus years of construction. Small merchants will not be able to survive the lost business and revenues for this long a period. The statement was made in one of the meetings that typically less than 50% of businesses survive the completion of such a major construction project.

WHY MUST THIS ETHNIC COMMUNITY BE SACRIFICED JUST SO THAT SOME FUTURE COMMUTERS WILL NOT TO MAKE ONE TRANSFER?

Robert D. Volk

PC88

Responses to Comments from Volk, Robert D.

Response to Comment PC88-1

The information about the history of the Little Tokyo neighborhood is appreciated. The refined Locally Preferred Alternative presented in Chapter 2 of this Final EIS/EIR avoids acquisition of approximately half of the block bounded by 1st Street, Alameda Street, 2nd Street, and Central Avenue in response to community input received during the Draft EIS/EIR process. Refinements have also been made to eliminate cut and cover activities on 2nd Street and begin tunnel boring machine operations on the Mangrove property instead of at 2nd and Central. These refinements would reduce impacts to businesses and result in less traffic congestion during construction. Metro will work with the community throughout the construction period to minimize impacts to businesses, and believes that the mitigation measures presented in the Mitigation Monitoring and Reporting Program for the Locally Preferred Alternative (Chapter 8) of this Final EIS/EIR will offer adequate protection for businesses. Metro will implement these mitigation measures identified in the Mitigation Monitoring and Reporting Program for the Locally Preferred Alternative to support the Little Tokyo community while achieving the project purpose of eliminating transfers from the light rail system.

The statement that typically less than 50 percent of businesses survive large-scale construction projects appears to be misinformed. No Metro project has ever resulted in such business losses.

Project Manager, Metro,
1 Gateway Plaza, MS 99-22-2,
Los Angeles, CA 90012

October 15, 2010

Dear Ms. Saltarelli,

1. Seniors want all the station signs and instructions in various languages/ English, Spanish, Japanese, Korean, including ticketing machines.
   Also the announcements of approaching train in Japanese and Korean will [1]

2. As residents of Little Tokyo and senior citizens, we want enforcement of the safety of Alameda St and 1st or 2nd during the construction years. Especially handicap access, rerouting bus route, detour, and please consider that a little bump on the street could be very crucial for seniors and disabled people. [2] Also please post or announce the re-routing or road closures in Japanese and Korean in a timely manner.. [3]

3. Seniors want to be able to have good air quality during construction. If they won't be able to open windows because of the dust, seniors want metro to install AC or air filters. [4]

4. Please let the seniors know where and how to complain during construction when something come up. [5]

Signed,

Signature

RE: Comments on Draft EIS/EIR for Regional Connector

Dear Ms. Roybal-Saltarelli:

As a resident of Savoy on the corner of 1st and Alameda Street, I would like to formally
support the Fully Underground Alternative that was added to the draft EIS/EIR as the only truly viable build option for this community. I agree with the team's recommendation
and endorsement of the Fully Underground Alternative as the "locally-preferred" alternative. 1

I also want to voice my concerns about construction, traffic, and related impacts on 2

residents as the project moves forward. I ask the MTA to work to protect the vibrancy of this community through mutual cooperation and adequate mitigation measures, as well as compensation to small businesses that will be affected. 2 cont'd

Thank you for your consideration.

Sincerely,

Savoy Resident
Unit #168

PC98

Responses to Comments from Altamirano, Jaime

Response to Comment PC98-1

Thank you for your comment. Support for the Fully Underground LRT Alternative is noted. The Metro Board of Directors voted on October 28, 2010 to designate the Fully Underground LRT Alternative as the Locally Preferred Alternative.

Response to Comment PC98-2

Comment acknowledged. Traffic and construction impacts associated with the Locally Preferred Alternative were discussed in Chapter 3, Transportation Impacts and Mitigation, and Section 4.18, Construction Impacts, of the Draft EIS/EIR and this Final EIS/EIR. Metro has coordinated with the Little Tokyo community throughout the design and environmental process of this project. For example, Metro has assisted the community in establishing the Little Tokyo Working Group, provided funding for a consultant to assist the community in understanding the potential project impacts during preparation of the Draft EIS/EIR, and coordinated with community groups during preparation of this Final EIS/EIR. Metro will continue to coordinate with the community during project construction, which will include the development of a community outreach plan to notify local communities of construction schedules, street lane and sidewalk closures, and detours. Appropriate candidate mitigation measures identified in the Draft EIS/EIR have been refined and confirmed in this Final EIS/EIR and the Mitigation Monitoring and Reporting Program for the Locally Preferred Alternative (Chapter 8).

Metro will implement the mitigation measures in the Mitigation Monitoring and Reporting Program for the Locally Preferred Alternative with the goal of supporting businesses throughout the construction phase. This will include targeted marketing efforts and other in-kind assistance. Metro will provide two acres of land on the Mangrove property, located at the northeast corner of 1st and Alameda Streets, for the purposes of providing supplemental parking services, such as valet parking services during construction in order to preserve the accessibility of the neighborhood during construction. Metro will minimize street closures, and will maintain access to businesses throughout the construction process.

Subject: *This does affect you & your unit*

For those new to the building (or needing a reminder), two important meetings are scheduled for the **Metro's Regional Connector** light-rail plan.

This project involves study of three build alternatives for light rail along second street (at Main) and therefore would directly impact the Higgins Building, your investment and/or quality of life. The three alternatives are: Fully underground; At-Grade and Underground emphasis.

The Higgins Lofts homeowners association, as well as other community groups in Little Tokyo, have all repeated urged (in writing and in person) that the project be built as a subway (Fully underground), rather than run at-grade (street level) in front of the building. However, I believe we need **sustained community involvement to maximize the chances of a good outcome for the building and the community**.

The first meeting is being held at the **Japanese American National Museum**, 369 E 1st St in Little Tokyo on **September 28, 6:30pm - 8pm**. The second meeting is being held at the Los Angeles Police Headquarters, 300 W 1st St. in the **Deaton Auditorium** (across the street from the Higgins), on **October 4, 11:30am-1pm**. 1

If you cannot attend either of these dates in person, I urge you to write a letter or email outlining your views and **support of the fully underground option** so that it becomes part of the permanent record:

email: **regionalconnector@metro.net** or

mail: Dolores Roybal Saltarelli, Project Manager
Metro
One Gateway Plaza, 99-22-2
Los Angeles, CA 900012

Finally, to mix my transportation metaphors and throw Joan Springhetti under the bus (so to speak), may I suggest if you have questions, that Joan is an excellent person to contact on this subject. She's been leading the charge and is very informed about this topic.

I the hopes of someday going down an escalator to catch the subway, yours,

1 cont'd

Subject: Comments on Regional Connector - PLEASE CONFIRM RECEIPT

To whom it may concern:

PLEASE CONFIRM YOUR RECEIPT OF THIS EMAIL

I am writing to add my comments to those of the Higgins Building Board of Directors and Higgins residents with regard to the EIR for the Regional Connector.

I am a resident of the building, and served until February of 2010 as the Chair of the Architecture and Design Committee of the Board of Directors. In that role, I have been in conversation with MTA Community Relations Director Ann Kerman and the Planning Committee about the project for a couple of years. I am also part of the team that put together the application for the Higgins' Historic Landmark designation in 2007, and am in conversation with both the City's Office of Historic Resources and the Los Angeles Conservancy, both of whom serve as consultants and important advocates for the building. 1

I conclude that the EIR, as presented, is inadequate and request that it be redone to more thoroughly and accurately address the following issues:

1. Concern about plans on which you base predictions about the effect of proposed construction on the Higgins Building

To my knowledge, no one from the EIR team or the MTA has entered the building or made true inspection of the building. The building is one hundred years old this year, and plans for the building, in terms of where our basement, sub-basement, and foundation lie sub-surface, have on more than one occasion proved unreliable. 2

I strongly request an on-site review of the building, so that your estimates of how the underground drilling will effect our foundation are based on actual and current measurements. Once those exact measurements have been made, I request that the EIR contain precise distances from Higgins property—above- and below-surface—that drilling and/or construction is intended.

I also request that an adequate contingency fund be included in the project in the event of damage to the Higgins Building, so that when the unexpected does occur, we are not mired in court suits to get the funding for whatever repairs may be necessary. The contingency fund should be large enough that, should the building be destroyed by your project, or made unlivable, there will be fair compensation to homeowners, who will need to find somewhere else to live.

2. Concern about proposed removal of the Wilcox Building at the corner of Second and Spring, and staging of construction directly adjacent to the Higgins Building

We live here. We have endured, for the past four years, the demolition of the former CalTrans building and construction of the LAPD headquarters across the street and the demolition and construction of the LAPD carport on Main Street, south of the building. Now we are looking at another major construction project that will further decay our quality of life and property values, 3

not to mention the threat to the infrastructure of this historic site.

There is a large parking lot on Second Street, between Spring and Broadway that would make far more sense to me as a staging site than the lot immediately adjacent to our home.

Please, figure out a way to keep the construction far, far away from the Higgins Building.

3 cont'd

3. Challenge to the EIR finding that the Higgins Building is not eligible for National Registry

The Office of Historic Resources and the LA Conservancy, as well as our own research, has led us to believe otherwise. Please cite specifically what disqualifies the Higgins Building from that designation, and what that disqualification means to you.

Please provide us with a basis for the finding that we are ineligible for National Registry status.

I am sending in a separate email our application for Landmark status, in the event that your EIR team did not review it.

4

4. Request for funding for independent assessment of potential damage to the Higgins Building

I request that the MTA provide funding for an assessment of potential Regional Connector construction damage to the Higgins Building by an independent expert in the restoration and preservation of historic buildings.

5

5. Reiteration of request for construction mitigation funding for the Higgins Building

In January 2010, Higgins HOA Board Members Martin Berg, Cheryl McDonald and I met with members of the Regional Connector Planning Committee, MTA's Ann Kerman, and Ginny Brideau, and Lambert Giessinger (Historic Preservation Architect,
Historic Resources) in the Office of Historic Resources at City Hall.

We discussed possible approaches to financial mitigation for the blow to our building — in the best of all circumstances — of the prolonged construction of the Regional Connector.

First, we discussed the possibility of MTA funding prophylactic stabilization of the building's facade in anticipation of the drilling. The building is old, and its facade ornamentation already fragile.

We also spoke about the one percent of the total cost of the project that is mandated for use for public art and the precedent set in Portland, Oregon (whose mid-city transit system serves as model and promise here) that public-art funding be used for the preservation and restoration of historic buildings. In addition to mitigation funding for essential preservation, we would like some of that public-art funding to be dedicated to cosmetics and restoration of this grand old building, standing proudly and prominently in our Civic Center.

The effect on the building of the project, as currently proposed, is far greater than we were led to expect, with the proposed demolition of the Wilcox Building and Higgins-adjacent staging. We request a continuation of the conversation about mitigation as soon as possible.

At the corner of 2nd and Main in Los Angeles, California

HIGGINS BUILDING

HISTORIC-CULTURAL MONUMENT APPLICATION
Los Angeles Cultural Heritage Commission
200 N. Spring Street, Room 66. Los Angeles, California, 90012. (213) 978-1183

IDENTIFICATION

1) **Name of proposed monument:** The Higgins Building
2) **Street address:** 108 W. 2nd Street, Los Angeles, CA 90012
3) **Assessor's parcel numbers:** From 5149 006 010 through 5149 006 151
4) **Legal description:** Lot 1, Tract 53327
5) **Range of addresses:** Residential: 108 W. 2nd Street, # 201-215, 301-315, 401-415, 501-515, 601-615, 701-715, 801-815, 901-915, 1001-1015.
   Commercial: 108 W. 2nd Street, #101, 102, 103, 104, 105, 106, 107, 108
6) **Owners:** Private ownership, 135 individual residences and 7 commercial spaces.
   Present use: Residential and commercial. **Original**: Offices and commercial.

DESCRIPTION

7) **Architectural style:** French Renaissance influences
8) **Architectural description of building:** (Attached)
9) **Construction:** 1909-1910 factual
10) **Architect, designer or engineer**: Architecture by A.L. Haley; engineering and architecture by A.C. Martin.
11) **Contractor or other builder:** MA Rowland and Kenneth Pruess (concrete), A. Barmann (steel), San Francisco Cornice Company (doors and windows), B.V. Collins (tile and marble), H.J. McGuire (excavation)
12) **Dates of enclosed photographs:** 1910, 1916, 1941, 1959, 2006
13) **Condition:** Good
14) **Alterations:** Ground-level storefronts have been altered by original and subsequent owners; basement levels and the rooftop have been modified. Upper 9 floors have been converted from offices into residential with 231 units combined into 135
15) **Threats to site**: none known
16) **Site:** original

SIGNIFICANCE

18) **Historic and architectural importance:** The Higgins Building, located within the downtown historic district, is an important early example of monolithic concrete construction in a high-rise building. It is also important for the role it played in the cultural and civic development of Los Angeles.
19) **Sources:** (Attached)
20) **Preparation of application:** Date: Dec. 4, 2006.

HIGGINS BUILDING

ARCHITECTURAL DESCRIPTION

The Higgins Building is a 10-story monolithic concrete high-rise constructed in 1909-1910 with architectural details in the French Renaissance style. It is rectangular in shape – 120 feet facing Main Street, 160 feet facing 2nd Street – and has a flat roof. At its center is a light well that brings sunlight and air to the interior.

Its clean lines, visible structural columns and architectural belts at the second and eighth stories distinguish the exterior. Large 6-foot-by-8-foot windows occur in pairs and indicate the original office configurations. The exterior is fully detailed on three sides; capping the building is a deep cornice and crown of white lights designed to show off the building and its electrical power plant in the sub-basement.

The building's support columns, beams, walls, floors and roof are all constructed of poured concrete reinforced with steel rebar; architectural details on the exterior and interior are also of poured concrete. After pouring forms were removed, all walls were finished with an additional coat of cement. To make the building fireproof, all wood doors and window frames were clad in zinc sheeting – a detail that remains one of the building's most distinctive. Narrow channels left at the interior edges of the concrete floors held the only exposed wood in the entire building: tack strips so carpets could be secured.

The lobby is finished in Italian marble, as is the bottom half of most hallway walls. Two staircases, including the one leading from the lobby, are also marble-finished. Hallway and lobby floors are in small black and white mosaic tile with a Greek key border; elevator doors and stair railings are of ornamental metal.

Although the Higgins Building has undergone a number of modifications since its initial construction and suffered losses to vandals during a period of disuse, its architectural integrity remains intact.

HIGGINS BUILDING

ARCHITECURAL AND CULTURAL SIGNIFICANCE

The Higgins Building, named for the man who built it, Thomas P. Higgins, is an important example of early monolithic concrete construction in a high-rise building. It set a new height record in Los Angeles for concrete, then considered unproven for tall buildings. Every element of the Higgins was designed to be fireproof – and it was engineered to withstand earthquakes. Years ahead of when electricity would be offered as a utility in Los Angeles, the Higgins had a self-contained electrical power plant in its basement. In addition to advancing the use and acceptance of concrete construction, the building launched the engineering and architecture legacy of A.C. Martin and led its primary architect, A.L. Haley, to another major concrete project, the Lanterman House in La Canada, which is on the National Register of Historic Places. The tenants who occupied the Higgins Building – from attorney Clarence Darrow to the leadership of the Catholic diocese – helped shape the cultural life and civic spirit of the city.

▤ ▤ ▤

When Thomas Patrick Higgins arrived in Los Angeles in 1902, he had money to spend – a fortune made in the copper mines of Arizona. He was born July 12, 1844, in Ireland, near Boyle, County Roscommon. He came to the United States at about age 20, first doing iron mining in New York, then lumbering in Wisconsin.

He was one of only a handful of settlers – all hardscrabble prospectors – in Bisbee, Ariz., when he arrived there in 1877. By the time he left Arizona for Los Angeles, he was nearly 60 and had made his mark on that state's economy and landscape. Ready to settle in a new home and invest in still-young Los Angeles, he took cash from the sale of mine holdings and began investing in real estate.

One of his early projects was the Bisbee Hotel on East 3rd Street. Now known as the St. George Hotel, it was recently restored as housing for the homeless. As construction on the Bisbee was wrapping up in 1903, Higgins bought a large parcel just a block away, across the street from St. Vibiana's Cathedral. He paid $200,000 cash for the lot on the southwest corner of 2nd and Main.

It was where Higgins was determined to make a lasting impression in Los Angeles by constructing an office and retail building that would be architecturally unrivaled. It would tower over its surroundings, be "absolutely fire and earthquake proof" – a timely selling point given the devastation in San Francisco – and make the best use of modern technology.

Higgins hired architect A.L. Haley and engineer A.C. Martin to make his building a reality – and the three men collaborated to create what would quickly be considered one of the best examples of monolithic concrete construction in the United States. At a time

when steel, brick and wood were the standard, Haley and Martin pushed the accepted limits of concrete – the material that would eventually become and remains favored for construction of nearly all types, including the world's very tallest skyscrapers.

In an embrace of another new technology, the basement of the Higgins Building contained one of the earliest electrical generating stations in Los Angeles. The city would not put up its first power pole until 1916. In the Higgins, six years earlier, massive boilers and two four-valve engines – one connected to a 75-kilowatt electric generator, and one to a 50-kilowatt electric generator – formed a power plant that Haley described as "the most complete found in any Los Angles building."

The list of advertised amenities included hot and cold running water in each office, electric lights, steam heat, purified water (sent through filters as it entered the building), telegraph and telephone service and three high-speed passenger elevators.

After construction was well underway, Higgins decided that he needed to build higher than the originally planned 8 stories – he was not to be outdone by an emerging plan for a 10-story building at 2nd and Broadway.

Taking the Higgins two stories higher meant getting the city to change its ordinance limiting the height of concrete buildings. A few years earlier – over the objections of brick, steel and stone men who had been petitioning to have concrete construction outlawed – the city council adopted a policy that allowed for the use of concrete within strict limits. Then, in 1910, with the Higgins half-built, Haley made an impassioned and successful case for raising the height limit to 133 feet – a decision the Los Angeles Times would characterize as "radical" and that generated a fierce debate in the architectural community.

To accommodate the greater height, Martin reengineered the building to stiffen the walls from the fourth story upward. So impressed with the building was The Architect and Engineer of California that it featured the Higgins in an 18-page spread in its April 1910 issue – with construction photos, diagrams and detailed specifications on the concrete process.

In a Jan. 2, 1910, article in the LA Times, Haley describe the many benefits concrete held for Los Angeles: "Reinforced concrete construction is made economical from the fact that material can be obtained from the local market, while the best structural steel can be manufactured … only by the heavy rolling mills of the East. There is also a great time saving in this kind of building. The fourth and fifth floors of the Higgins building, for example, were built complete within a period of twenty-eight days." In short, this was the material that would allow Los Angeles to quickly and efficiently build itself into a great city.

His partner in the design of the Higgins, Albert Carey Martin, had arrived in Los Angles in 1904 as a new engineering graduate from the University of Illinois. When the Higgins was completed in 1910, Martin was just 30 years old and made a name for himself with his concrete work on the project. Nearly a century later, the engineering and architecture

firm he launched – and would be joined in by his sons – still bears his name. "You can't envision Los Angeles without their work," said Ken Starr, state librarian and urban planner, in a 1997 magazine article. "They are among the half-dozen architectural firms that over the past 100 years have given us the major buildings of Los Angeles, the city in its public dimension." Martin headquartered his company in the Higgins for 35 years – and worked there on plans for such landmarks as Grauman's Million Dollar Theater (1917), St. Vincent de Paul Roman Catholic Church (1925) and Los Angeles City Hall (1928). By the time of Martin's death in 1960, his firm had worked on some 1,500 building projects – and cemented its reputation with innovative use of concrete.

The architect on the Higgins Building – Arthur L. Haley – was 45 years old and already established for his commercial and residential work in the city. Born in Malone, N.Y., in 1865, he had been designing buildings in Los Angeles since at least 1899, in particular downtown apartment buildings and residential hotels that helped build the city's housing stock. Many featured his patented invention – "The Sanitary Concealed Metal Wall Bed" – which is credited with altering the layout of thousands of apartments on the West Coast.

In 1904 he built a large home for the president of the LA City Council – the Pomery Powers Residence at 1345 Alvarado Terrace. Today, it is a Los Angeles Historic-Cultural Monument and elegantly houses a drop-in center for the homeless. The year after Haley finished the Higgins Building, he was commissioned to build a fireproof home for Dr. Roy Lanterman, a refugee from the San Francisco earthquake and fires. The house, restored to its original condition, is recognized as one of the earliest homes of poured concrete in the region. Open to the public, it houses a museum on La Canada history.

Despite his remarkable achievements, several years after work on the Higgins Building was completed, Haley's career became marred by charges of investor fraud – and by bankruptcy. He is believed to have left the city, perhaps for the Seattle area.

▤ ▤ ▤

When the Higgins Building opened in the last half of 1910, it quickly became the cultural center that its millionaire developer had imagined. It was the place to see and be seen – and by an eclectic mix. Attorneys, businessmen, socialists, clerics and chess champs would all walk its halls.

The Chess and Checker Club of Southern California was founded in the Higgins; the Women's Progressive League made it its headquarters and held luncheons on the rooftop. The first piece of mail delivered by regularly scheduled aerial post – sent Sept. 9, 1911, from England – arrived 17 days later, addressed to J.A.S. Furlonge, 411 Higgins Building. The Assn. of Liquor Dealers helped spearhead the fight against prohibition from the Higgins; the volunteer City Cleaning Bureau sought to clean up vacant lots.

Among those who set up offices on the 9th floor was criminal defense attorney Clarence Darrow, who came in from Chicago to defend the McNamara brothers, charged in the deadly Oct. 1, 1910 bombing of the Los Angeles Times. The brothers were spared the

death penalty after Darrow advised them to plead guilty. The case was not over for Darrow, however, who was forced to stay in Los Angeles to defend himself against charges he bribed a juror. After two lengthy trials, he was found not guilty. The bombing of The Times and its aftermath were pivotal events in the labor history of Los Angeles – and the case was pivotal in the life of Darrow. By the time he left LA, his reputation was tarnished and his health fragile. His most famous case, the Scopes Monkey Trial, would not come for another 14 years, but his trials in Los Angeles, personally and in court, had a dramatic impact on him.

Job Harriman, a labor attorney and a national leader in the socialist movement, had already set up his offices in the Higgins when Darrow came to town. Harriman would serve as co-counsel in the bombing case and the Higgins became the defense team's headquarters. Harriman, the onetime vice presidential candidate on the Eugene Debs ticket and candidate for governor of California, would run nearly successful campaigns (in 1911 and 1913) to become socialist mayor of Los Angeles. It was also in the Higgins that he developed his plans for a socialist community, Llano del Rio Colony, which was established in 1914 in the Antelope Valley. It struggled and eventually moved to Louisiana, but is considered one of the most important utopian colonies in the American West. Harriman died in Los Angeles in 1925.

Many early tenants in the Higgins Building were lawyers and investors, but its star became the General Petroleum Co. — a highly successful independent firm that would become one of the precursors to Mobil Oil. After starting in a single small office in 1911, it quickly took command of the 10th Floor and eventually occupied nearly the entire building. General Petroleum had refineries and pipelines throughout the area and is credited with the find in 1936 of the last major oil reserve in the LA Basin.

The Higgins served as the Chancery Office for the Catholic Diocese of Los Angeles and Monterey for nearly two decades. With the arrival of Bishop John J. Cantwell in 1917, the chancery moved from a house next to St. Vibiana's to the 8th floor of the Higgins – overlooking the cathedral.

Despite Thomas Higgins' grand vision for the north end of downtown, the focus of development began shifting to the south and west. He did not live to see the turn, however – he died March 15, 1920, at age 76.

Higgins, who never married, was eulogized as a major contributor to the cultural and social life of the city. He readily lent his support to causes Irish and Catholic. Despite his extensive mining wealth and real estate holdings, his home at 12th Street and Magnolia Avenue was large but unimposing. He supported charities in Los Angeles and Arizona, and prided himself in funding college educations for numerous young men he saw as deserving. And, before and after his death, he supported his extended family and their descendents, many in Ireland and a number of whom settled in California.

Higgins is buried in Los Angeles, at Calvary Cemetery, alongside his sister and other relatives in a family mausoleum – designed in 1904 by A.L. Haley.

In 1949, the Higgins Building underwent a major shift: General Petroleum and its signature symbol – the Pegasus – moved out and into a brand-new building at 6th and Flower. The Higgins Estate, which still operated out of the Higgins Building, called it quits that year, too, liquidating its real estate and other holdings.

The Higgins Building was sold for about $1 million to the County of Los Angeles, which was looking for a new headquarters for its Bureau of Engineering. It was given a new name: the Los Angeles County Engineering Building – which is how many in Los Angeles remember it. After more than 25 years of overseeing construction projects large and small from one of the city's strongest buildings, the county determined that the department needed more modern quarters and pulled up stakes in 1977.

Abandoned to the elements for the next two decades, the Higgins became such a painful eyesore that it was the subject of a 1997 article in the LA Times Magazine, "The Building That Time Forgot." Its windows gone and doors boarded up, only pigeons, human trespassers and vandals visited it.

When its future seemed bleakest, the Higgins Building was sold – in 1998 for just over $1 million – and it began life again.

It became one of the first of what would be many adaptive reuse projects that have helped to revitalize downtown. Its original name reclaimed, the Higgins Building reopened in 2003 with its 231 offices converted into 135 residences and its 7 ground-level commercial spaces ready for new enterprises.

It had survived, in good times and terrible ones, and as its builders had intended – resistant to fire and earthquakes. Today, it is filled with homeowners and businesses drawn to its architecture and history – and to bringing new energy to downtown at the turn of a second century.

Responses to Comments from Chaiken, Stacie

Response to Comment PC100-1

Comment acknowledged. Please refer to Responses to Comments PC100-2 through PC100-6, below, for detailed responses regarding concerns raised by the commenter.

Response to Comment PC100-2

A comprehensive pre-construction survey of the Higgins Building will be performed prior to construction to document the building's condition and verify construction plans. This will be done after the Final EIS/EIR process has been completed; therefore, inclusion of this level of detail in the environmental document will not be possible. Findings of the pre-construction survey will be shared with the homeowners association. Metro will request permission to place vibration monitors in the building to ensure that vibration from the tunnel boring machines does not exceed acceptable thresholds and cause damage to the building. Metro will verify any damage to the building that occurs as a result of Regional Connector construction and restore the building to its pre-construction survey condition. Metro will compensate homeowners should temporary displacement be necessary as part of such repairs. Funding for this type of contingency is included in the financial plan presented in Chapter 6 of this Final EIS/EIR.

Response to Comment PC100-3

The Metro Board of Directors voted on October 28, 2010 to remove the Wilcox and Olender Buildings (APNs 5149-007-006 and 5149-007-005) from consideration as acquisitions for the Regional Connector project. Only a subsurface easement beneath APN 5149-007-006 would be required for construction of the Locally Preferred Alternative.

Response to Comment PC100-4

Metro reviewed the background research and other information on the Higgins Building including the application for California Landmark Status. As indicated in the historic property inventory form, the building is eligible for the California Register due to its association with Job Harriman and Clarence Darrow. Background research did not indicate that the building is eligible for the National Register under Criterion B for its association with these individuals. Although the building had tenants who were noted for their involvement with the development of the oil industry in California, background research did not indicate that the Higgins Building is the location of significant events relating to those activities, therefore the building is not eligible for the California Register under Criterion 1 or the National Register under Criterion A. Due to the loss of its integrity of design, workmanship and materials from alterations, the building was recommended as not eligible for the California Register under Criterion 3 or the National Register of Historic Places under Criterion C. The State Historic Preservation Officer reviewed the inventory form and concurred with Metro's determination on June 1, 2010. No additional information has been presented to indicate that the building is eligible for the National Register.

Response to Comment PC100-5

Metro will hire a qualified contractor to perform a pre-construction survey of the Higgins Building, including analysis performed by an architectural historian or historical architect who

meets the Secretary of Interior's Professional Qualification Standards, as indicated in Section 4.12.1.4.3 of the Draft EIS/EIR and the Mitigation Monitoring and Reporting Program for the Locally Preferred Alternative (Chapter 8) of this Final EIS/EIR.

Response to Comment PC100-6

Appropriate mitigation measures identified in Section 4.7, Noise and Vibration, of the Draft EIS/EIR, which have been refined and confirmed in Section 4.7 and the Mitigation Monitoring and Reporting Program for the Locally Preferred Alternative (Chapter 8) of this Final EIS/EIR, would preserve the pre-construction condition of the Higgins Building. With implementation of mitigation, construction-related vibration impacts to historic buildings and sensitive buildings (Category I, II, III, IV buildings as defined in Table 4.7-4) would be reduced to less than significant. Metro has performed an additional vibration study, and concluded that no impacts to the Higgins Building would occur after mitigation. The results of this study are presented in Section 4.7, Noise and Vibration, of this Final EIS/EIR. The alignment would provide operational benefits including higher train speeds, more efficient operations, and better access to Upper Grand Avenue for passengers. Given that the Locally Preferred Alternative would not impact the Higgins Building, funding for restoration of the Higgins Building would not be required. However, Metro will explore funding options for restoration of historic buildings in the future as part of a separate project.

During preparation of this Final EIS/EIR, Metro held meetings with community groups, which included the Higgins Building HOA, and identified municipal leaders to guide them in the decision-making process as it relates to the proposed station locations, alignment options, and anticipated mitigation measures. Community input during these meetings has been taken into account in the refinement of the Locally Preferred Alternative and the Mitigation Monitoring and Reporting Program for the Locally Preferred Alternative (Chapter 8), which are presented in this Final EIS/EIR.

Los Angeles, CA 90012

RE: Comments on Draft EIS/EIR for Regional Connector

Dear Ms. Roybal-Saltarelli:

I am a resident of Savoy, the condominium complex on the corner of 1st and Alameda streets, and I would like to add my name to the list of residents and community members who support the fully underground alternative for the regional connector. I would also like to state that I am against the other options (Above-ground and underground emphasis), including the no-build alternatives. 1

As a regular transit rider, I am very excited about this project and I understand its importance. I am, however, concerned about the impact that the construction will have on the Little Tokyo community. So far, I am pleased with the communication between Metro and the Little Tokyo community. Metro seems to be listening to our concerns. I hope that the lines of communication will remain healthy and open during the construction phase. 2

Thank You

Bobby Garza
100 S. Alameda St. #371
LA, CA. 90012

PC101

Responses to Comments from Garza, Bobby

Response to Comment PC101-1

Thank you for your comment. It is noted that the commenter supports the Fully Underground LRT Alternative and opposes the No Build, At-Grade Emphasis LRT, and Underground Emphasis LRT Alternatives. The Metro Board of Directors voted on October 28, 2010 to designate the Fully Underground LRT Alternative as the Locally Preferred Alternative.

Response to Comment PC101-2

Metro will continue coordinating with the Little Tokyo community during construction of the Locally Preferred Alternative. A community outreach plan will be developed to notify local communities of construction schedules, street lane and sidewalk closures, and detours. Metro will also coordinate with local communities during preparation of traffic management plans to minimize potential construction impacts to community resources and special events.

Cc: Ginny-Marie Brideau
Subject: There are several points I wish to make on the Regional Connector EIR.

There are a number related points I wish to make on the Regional Connector EIR. First, any new fixed rail improvement needs to be accompanied with new development that will make the system more productive. This is particularly true during non-rush hours and on nights and weekends.

That is why the land surrounding this proposed Second Street Station should be considered an unique opportunity to remove and rebuild the redundant existing infrastructure, repurpose the greatly under-utilized land, relocate the Sempra facility, remove the barriers between the parts of Bunker Hill presently separated by a maze of roads, bridges, underpasses and awkwardly shaped, inaccessible patches of green and find a way to create new transit destinations, enhance the existing cultural destinations and create economic development by creating greater opportunities for cultural tourism. 1

The obstacle to this happening though is the single biggest flaw of the present plan - the lack of a vision for a greater master plan for the area. And the greatest obstacle to creating that plan is the assumption that the present patchwork of barely used roads that crisscross the site should remain untouched and the digging of the trenches for the subway and the station should take place incrementally rather than the wholesale excavation of the site - with a temporary loop road making the necessary connections and first

rationalize the streets and possibly even platform over some of them to create both real park space and opportunities to fulfill existing cultural needs.

The first primary need is lack of a building for MOCA to house its permanent The Geffen is great for larger temporary shows and the building on Grand is a wonderful - though small - place for either touring shows or the permanent collection. But it is far too small to house even a fraction of the already existing permanent collection. And since the Broad Collection - across the street - will have one of the world's greatest collections of mid to last 20th Century Art - with many artists collected in depth - is is imperative that it be located by the permanent collection and that the permanent collection remains on Grand avenue. But since the it can not be expanded for a variety of reasons - then a site must be found - or created - that is adjacent to both MOCA and the Broad.

This site can also fulfill another cultural problem. MOCA's photography collection is still developing However - the Getty has a world class collection and that is the only contemporary art form they collect. The Getty also has a deed restriction that they can never add even one square foot to the Brentwood Campus - making it impossible for them ever to build a new museum there. And as it has often been suggested that the Getty also have a museum in a more urban setting - what better place than to complement the MOCA collection as the Broad Collection will soon do

1 cont'd

Lastly, if the financial district station is removed - it needs to still have the elevator proposed for that station to still be built to better bring pedestrians on up to the top of Bunker Hill to better connect the flats with the top of the hill.

PC102

Responses to Comments from Westwater, Brady

Response to Comment PC102-1

Metro will work with the community to determine re-use of construction staging areas after construction is completed. In doing so, Metro hopes to create destinations compatible with transit use. Suggestions for improvement of the Bunker Hill area are noted. Roadway reconfiguration in the vicinity of the 2nd/Hope Street station would occur as part of the Regional Connector project. Metro is committed to minimizing construction impacts. All station facilities would be made accessible to persons with disabilities using features such as elevators and ramps as needed.

Response to Comment PC102-2

The Broad Art Foundation Museum, currently under construction, is projected to include a plaza above General Thaddeus Kosciuszko Way connecting to Upper Grand Avenue. In order to provide access from the 2nd/Hope Street station to Upper Grand Avenue, an elevator would be built as part of the Locally Preferred Alternative from the station entrance to the plaza, as required to accommodate persons with disabilities, if one is not already provided. If the plaza is not built as part of the Broad Art Foundation Museum, a pedestrian connection (such as a pedestrian bridge) would be built as part of the Locally Preferred Alternative from the elevator to Upper Grand Avenue.

Subject: Regional Connector Draft EIR comments
Date: Monday, October 18, 2010 1:11 AM
From: Hank Fung <hank@bleeble.org>
Reply-To: "hank@bleeble.org" <hank@bleeble.org>
To: "ray.tellis@dot.gov" <ray.tellis@dot.gov>, Dolores Roybal Saltarelli <roybald@metro.net>, Regional Connector <RSC_RegionalConnector@metro.net>

Dear Mr. Tellis and Ms. Roybal-Santelli:

I agree with MTA's staff recommendation that the Locally Preferred Alternative remove the 5th and Flower station, as it is two to three blocks to other rail stations (downhill if one walks in the right direction) and would increase the cost significantly. However, I do not share the same thought about the fully underground option as the LPA. The underground emphasis option is sufficient to relieve the vast majority of impacts to the Little Tokyo community at a much lower cost. The difference in cost can be used to provide goodwill for businesses, acquire properties that would be impacted or for construction staging, etc. while, in the long term, the community will grow around the at-grade crossing at Alameda under the underground emphasis option. I prefer the Los Angeles Street Option due to a reduced impact on existing businesses on Broadway and the distance between the stations to the east and west. Also, the Broadway station is very close to the Red Line station, and the Regional Connector should provide more access to Downtown, not just to similar locations as today. 1 2

If the LPA selects the Fully Underground option, then MTA staff should create a Benefit Assessment District for the area within a reasonable surrounding distance from the at-grade intersection removed and require those property owners to approve a property tax increase to pay for the undergrounding of the 1st/Alameda intersection, which my understanding will cost tens of millions of dollars and additional construction time. If the property owners fail to approve this tax, then the underground emphasis option provides most of the travel time benefits as the fully underground option, eliminates a confusing station at 1st/Alameda for downtown customers, and the underground emphasis option should be the LPA following this vote. 3

Also, there needs to be flexibility to select options for train routing other than the proposed East LA-Santa Monica and Pasadena-Long Beach routes. Perhaps trip travel patterns show something differently. In any event, the EIR should not constrain future operational configurations. 4

Finally, the estimated service frequency in the EIR is too optimistic (Chapter 2). The EIR projects a peak hour headway of 2.5 minutes along the Regional Connector. it is my understanding that LADOT has constrained the number of trains that are allowed to operate on the surface sections of the Blue/Expo Lines between the portal south of 7th Street/Metro Center and Washington Boulevard, where the Expo and Blue Lines diverge. Chapter 2 also presupposes one option for Eastside Extension Phase II over another, through the use of the term "I-605" - as far as I know, only the SR-60 option has a I-605 option. The terminology should be used as the existing proposed termini options, which are South El Monte (Peck Road/SR-60) and Whittier (Washington/Greenleaf?). 5 6

In addition, on some sections of Appendix I, it is indicated that "Portions of this appendix have been intentionally left blank. This 7

information is available from Metro upon request." What is this information? Why is it left blank? A brief description of the information omitted would be helpful in evaluating the completeness of the EIR. If the concern is privacy, all comenters' names, addresses, and phone numbers if they chose to provide them are in the scoping reports and incorporated in the EIR, so I fail to see why any information needs to be omitted, especially in an electronic copy where there is an unlimited amount of space available.

7 cont'd

Sincerely,

Hank Fung, P.E.

PC103

Responses to Comments from Fung, Hank

Response to Comment PC103-1

Preference for the removal of the Flower/5th/4th Street station is noted. The Metro Board of Directors voted on October 28, 2010 to designate the Fully Underground LRT Alternative without the Flower/5th/4th Street station as the Locally Preferred Alternative. An enhanced pedestrian walkway connecting the 4th/Flower Streets area to the existing 7th Street/Metro Center Station would be constructed on Flower Street to improve access to the Financial District. The design of the Locally Preferred Alternative would not preclude a station at 5th and Flower Streets from being built as a possible future, separate project.

Response to Comment PC103-2

Thank you for your comment. Support for the Underground Emphasis LRT Alternative and station preference is noted. It is also noted that the commenter does not support the Fully Underground LRT Alternative. The Metro Board of Directors voted on October 28, 2010 to designate the Fully Underground LRT Alternative as the Locally Preferred Alternative.

Response to Comment PC103-3

Metro has used benefit assessment districts to fund rail transit projects in the past, but this is not part of the current financial plan, as summarized in Chapter 6 of the Draft EIS/EIR. The introduction of the Fully Underground LRT Alternative into the Draft EIS/EIR was done to offset the potential disproportionate adverse impacts that the At-Grade Emphasis LRT Alternative and Underground Emphasis LRT Alternative would have in Little Tokyo. The Metro Board of Directors voted on October 28, 2010 to designate the Fully Underground LRT Alternative as the Locally Preferred Alternative.

Response to Comment PC103-4

The proposed routings for the Regional Connector service are from East Los Angeles (eventually I-605) to Santa Monica and from Pasadena (eventually Montclair) to Long Beach. The tracks would be constructed in a way that allows train movements from Pasadena to Santa Monica and from East Los Angeles to Long Beach.

Response to Comment PC103-5

The Regional Connector is designed to accommodate 2.5 minute headways, independent of any headway restrictions in place on other parts of the Metro Rail system.

Response to Comment PC103-6

Both the SR 60 LRT Alternative and Washington Boulevard LRT Alternative for the Eastside Extension Phase 2 would terminate in the vicinity of I-605. No Locally Preferred Alternative designation has occurred for the Eastside Extension Phase 2 project yet; therefore, "I-605" was used in the Regional Connector Draft EIS/EIR as an approximate terminus that applies to both build alternatives for the Eastside Extension Phase 2 project.

Response to Comment PC103-7

The information omitted from Appendix I, Agency Coordination and Public Involvement, and Appendix G, Final Scoping Report, of the Draft EIS/EIR are the sign-in sheets used during various outreach meetings held for the project. The sign-in sheets contain attendee's personal information and it is customary to omit sign-in sheets when circulating environmental documents to protect an individual's personal information.

Joan Springhetti
108 W. 2nd Street
Los Angeles, CA 90012
Oct. 18, 2010

Dolores Roybal Saltarelli,
Metro Project Director
One Gateway Plaza
Los Angeles, CA 90012

Dear Ms. Roybal Saltarelli,

I am writing to express my concerns about the impact of noise from construction of the proposed Regional Connector Transit Corridor on the residents of the Higgins Building. The Higgins Building faces 2nd Street on the route of the proposed project and is very near the site of a proposed station. It is my home and home to 134 other families. 1

The report fails to address this issue in terms of expected noise levels, hours of operation and cumulative impact. Additionally, in assessing existing noise levels at the location of the building, it used an estimate from other locations in the area rather than taking actual measurements. I contest that assumption. 2

How does this project propose to stay within the city and county standards for construction noise? 3

How does it reconcile with the Federal Transit Administration's report on noise and vibration and the special protections it affords historic properties, including the Higgins Building, and passive parks, including the community park next to the LAPD Headquarters? 4

CITY ORDINANCE:

41.40 LAMC- Construction Noise

- Engaging in construction, repair, or excavation work with any construction type device, or job-site delivering of construction materials without a Police Commission permit;
- Between the hours of 9:00 p.m. and 7:00 a.m.;
- In any residential zone, or within 500 feet of land so occupied, before 8:00 a.m. or after 6:00 p.m. on any Saturday, nor at any time on any Sunday;
- In a manner as to disturb the peace and quiet of neighboring residents or any reasonable person of normal sensitiveness residing in the area.

5

SEC. 111.03. MINIMUM AMBIENT NOISE LEVEL.
(Amended by Ord. No. 156,363, Eff. 3/29/82.)
Where the ambient noise level is less than the presumed ambient noise level designated in

this section, the presumed ambient noise level in this section shall be deemed to be the minimum ambient noise level for purposes of this chapter.

TABLE II
SOUND LEVEL "A" DECIBELS

(In this chart, daytime levels are to be used from 7:00 a.m. to 10:00 p.m. and nighttime levels from 10:00 p.m. to 7:00 a.m.)

	PRESUMED AMBIENT NOISE LEVEL (dB(A))	
ZONE	**DAY**	**NIGHT**
A1, A2, RA, RE, RS, RD, RW1, RW2, R1, R2, R3, R4, and R5	50	40
P, PB, CR, C1, C1.5, C2, C4, C5, and CM	60	55
M1, MR1, and MR2	60	55
M2 and M3	65	65

At the boundary line between two zones, the presumed ambient noise level of the quieter zone shall be used.

5 cont'd

City, county and federal laws governing noise and vibration were designed to safeguard the health and well-being of the city's people and buildings. It is critical that they be adhered to, especially with a project of this scope and duration.

Sincerely,

Joan Springhetti

PC104

Responses to Comments from Springhetti, Joan

Response to Comment PC104-1

Section 4.7, Noise and Vibration, and Appendix S, Noise and Vibration Technical Memorandum, of the Draft EIS/EIR, Supplemental EA/Recirculated Draft EIR Sections, and this Final EIS/EIR identified construction activities, relevant construction equipment, and construction-related noise levels for each build alternative. As indicated in Chapter 2, Alternatives Considered, of the Draft EIS/EIR and this Final EIS/EIR, construction schedules would be established with community input and consideration of community activities.

Section 4.19, Cumulative Impacts, of the Draft EIS/EIR and this Final EIS/EIR summarized cumulative impacts for resource areas where an alternative would result in a considerable contribution. Since none of the build alternatives would result in a considerable contribution to cumulative noise impacts during construction, cumulative noise impacts were not discussed in detail in this section. Appendix GG, Cumulative Impacts Technical Memorandum, of the Draft EIS/EIR discussed cumulative noise impacts associated with construction of each alternative. As indicated in Section 4.7, Noise and Vibration, of the Draft EIS/EIR, Supplemental EA/Recirculated Draft EIR Sections, and this Final EIS/EIR, with implementation of potential mitigation, construction of the Fully Underground LRT Alternative (the Locally Preferred Alternative) would not contribute to potentially adverse cumulative noise or vibration impacts.

Response to Comment PC104-2

Comment acknowledged. Noise levels at the Higgins Building were estimated based on nearby measurements because existing noise levels at the Higgins Building could not be accurately measured due to construction at Saint Vibiana and on Main Street, as indicated in Section 4.7, Noise and Vibration, of the Draft EIS/EIR and this Final EIS/EIR. Additionally, estimation of noise levels is acceptable by the FTA Transit and Vibration Impact Assessment when buildings have exposure to the same noise sources.

Response to Comment PC104-3

The Regional Connector project is located in the jurisdiction of the City of Los Angeles and would not need to be consistent with goals of the County of Los Angeles noise standards as the project is located outside the County's jurisdiction. Construction of the Locally Preferred Alternative would be consistent with the goals of Section 41.40(a) of the Los Angeles Municipal Code. As indicated in Section 4.7, Noise and Vibration, of this Final EIS/EIR, typical types of Best Management Practices (BMPs) the contractor can use to be consistent with the goals of applicable local ordinances include, but are not limited to, the following:

- Placement of temporary noise barriers around the construction site;
- Placement of localized barriers around specific items of equipment or smaller areas;
- Use of alternative back-up alarms/warning procedures;

- Higher performance mufflers on equipment used during nighttime hours; and
- Portable noise sheds for smaller, noisy, equipment, such as air compressors, dewatering pumps, and generators.

Response to Comment PC104-4

As indicated in Section 4.7, Noise and Vibration, and Appendix S, Noise and Vibration Technical Memorandum, of the Draft EIS/EIR and this Final EIS/EIR, the noise and vibration impact analysis for this project is based on criteria defined in the *FTA Transit Noise and Vibration Impact Assessment* (USDOT 2006). CEQA does not provide quantitative thresholds for a substantial noise impact or a significant adverse vibration impact. This analysis applies FTA criteria to determine the threshold for significance. The Los Angeles Municipal Code section 41.40(a) does not set acceptable noise level limits for either daytime or nighttime construction activities.

Construction noise and vibration were analyzed using the procedures presented in the *FTA Transit Noise and Vibration Impact Assessment*. This document includes FTA guidance on minimum safe distances between construction equipment and buildings based on the types of construction equipment and the category of a building. The most conservative minimum safe distance was used to analyze vibration impacts to sensitive and historic buildings in the vicinity of construction activities, including the Higgins Building. Metro has performed an additional vibration study, and concluded that no impacts to historic resources would occur after mitigation. The results of this study are presented in Section 4.7, Noise and Vibration, of the Supplemental EA/Recirculated Draft EIR Sections and this Final EIS/EIR.

Response to Comment PC104-5

As indicated in Section 4.7, Noise and Vibration, of this Final EIS/EIR, construction of the project would be consistent with the goals of Section 41.40(a) of the Los Angeles Municipal Code. The Regional Connector project is located in the jurisdiction of the City of Los Angeles and would not need to be consistent with the goals of the County of Los Angeles noise standards as the project is located outside the County's jurisdiction. In addition, the ambient noise levels measured in the project area were higher than the presumed ambient noise level designated in Section 111.03 of the Los Angeles Municipal Code. Therefore, the presumed ambient noise levels were not used.

I wrote previously in support of the all underground option and in opposition to both of the other options. Upon careful review, I realized that two properties on the SE corner of Spring and 2nd Streets are scheduled to be demolished and used for staging. I am strongly opposed to the demolition of these buildings. Tenants in those buildings such as the Southland Credit Union and the 2nd Street Cigar and Gallery are important members of our community and it would be a huge loss to most stakeholders in the area if these businesses were closed or moved. I understand the need for a staging area and suggest the open lot at 2nd and Broadway be used since construction on the Federal Court Building is not scheduled to begin for a few more years. 1

Further, as a stakeholder in this immediate area for the last 8 years, I and my neighbors have endured the construction of the Cal Trans Building, the demolition of the previous Cal Trans offices, the construction of the new PHF, the remodeling of Saint Vibiana's,

and the construction of two parking lots adjacent to Vibiana's.

While I'm willing to support the construction of the Regional Connector in close proximity to my home, I am extremely displeased that building demolition and staging will be taking place at a mere 5 meters from my property. It is inconceivable that sound levels during construction will be remotely near the range permitted by Los Angeles code. I will gladly perform a demonstration for the Board as to what actual sound levels will be for the duration of construction (I provided this service to the City Council during EIR review for the PHF.)

1
cont'd

There are many stakeholders in this area, but none will be affected more than residents, and much of that inconvenience can be avoided by staging further from residences and closer to businesses. Please reconsider the demolition of the two buildings on Spring Street, just south of 2nd Street.

Response to Comment PC105-1

The Metro Board of Directors voted on October 28, 2010 to remove the Wilcox and Olender Buildings (APNs 5149-007-006 and 5149-007-005) from consideration as acquisitions for the Regional Connector project. Only a subsurface easement beneath APN 5149-007-006 would be required for construction of the Locally Preferred Alternative.

October 18, 2010

Dolores Roybal Saltarelli, Project Manager
One Gateway Plaza, MA 99-22-2
Los Angeles, CA 90012

Dear Ms. Roybal Saltarelli:

As Metro completes its Draft Environmental Impact Report/Environmental Impact Statement (Draft EIR/EIS) for the Regional Connector project, I urge that the Fully Underground Light Rail Transit (LRT) Alternative be adopted as the project's Locally Preferred Alternative (LPA). This alternative will provide for the fastest travel of light rail trains through Downtown Los Angeles. This will be key as the Regional Connector must meet the both the goals of 1) providing access to Downtown destinations and of 2) providing means for crossing through Downtown to reach destinations elsewhere in the county. 1

As a fully-grade separated facility, the Regional Connector will not only provide fast travel, but also reliable travel. Given that our light rail lines will combine to reach headways as low as 2.5 minutes along the Regional Connector, it will be critical to keep trains moving efficiently to prevent delays to the rest of the light rail network. A predominantly at-grade Regional Connector would introduce significant variability in train performance, much like the street-running portion of our current light rail lines do, and would be inadequate for handling high-frequency service. 2

It is regrettable that between 12th Street and Washington Boulevard along the existing Blue Line, trains will run at-grade with vehicular traffic for the foreseeable future. This will be a limiting element of the Regional Connector and our entire light rail network as long as it remains in its current configuration. I recommend strategies for improving this segment of track be studied as soon as possible and incorporated into the Regional Connector project. Possible strategies could include improved signal timing, signal priority, street closures, and grade separation. 3

Reliability and travel times will also be limited by the configuration of the Regional Connector junctions at 1st Street and Alameda Street and at Washington Boulevard and Flower Street. Unfortunately, the Washington/Flower junction is currently being constructed as part of the Exposition Line project as a flat junction, as opposed to a flying junction. Operationally, a flat junction will impose strict limitations on the movements on trains through the junction because southbound Blue Line trains cannot pass through the junction at the same time as northbound Expo Line trains. Schedules for trains in opposing directions will therefore have to be coordinated. Delays in one direction of trains will therefore not only propagate to other trains in the same direction but also to trains in the opposite direction. 4

Internally, Metro studied "Little Tokyo Variation 2," an alternative including a flying junction at 1st/Alameda, much like at the Wilshire/Vermont station, instead of the otherwise planned flat junction. I strongly encourage that the Fully-Underground Alternative Variation 2 be adopted to ensure reliable operation of light rail trains through the Regional Connector for decades to come. In the future, the Washington/Flower junction could also be upgraded to a flying junction by adding a flyover for northbound Expo Line movements.

In addition, I also recommend that the 5th/Flower station be retained in the project LPA. When both the Expo Line and the Regional Connector are in place, we will see a drastic increase in riders traveling through the 7th Street/Metro Center station. Even now, the station sees crush loading on its trains and platforms. The 5th/Flower station is therefore critical to serving passengers in the Financial District, who would otherwise turn to the 7th Street/Metro Center station. The Financial District is also 5

among the densest portions of the county in terms of employment density and is certainly deserving of a station on its own merits. 5 cont'd

Thank you for your consideration.

Sincerely,
Justin Walker

PC106

Responses to Comments from Walker, Justin

Response to Comment PC106-1

Thank you for your comment. Support for the Fully Underground LRT Alternative is noted. The Metro Board of Directors voted on October 28, 2010 to designate the Fully Underground LRT Alternative as the Locally Preferred Alternative.

Response to Comment PC106-2

Support for a fully grade-separated alternative is noted. The Metro Board of Directors voted on October 28, 2010 to designate the Fully Underground LRT Alternative as the Locally Preferred Alternative.

Response to Comment PC106-3

The Regional Connector would connect to the existing Metro Blue Line tracks at 7th Street/Metro Center Station, and trains on both the North-South Line and East-West Line would use the existing at-grade tracks on Flower Street between 12th Street and Washington Boulevard. The Regional Connector would not preclude improvement from being made to these at-grade tracks as a possible future project.

Response to Comment PC106-4

Metro performed a rail simulation for both the single-level junction and two-level junction configurations of the 1st and Alameda Streets intersection. The simulations revealed that both configurations would be able to adequately handle the maximum volume of trains anticipated for the Regional Connector without propagating delays through the system. The two-level junction (Little Tokyo Variation 2) was not pursued for further study in the Draft EIS/EIR because of its potential impacts to the Los Angeles Hompa Hongwanji Temple. The Regional Connector would not preclude the Washington/Flower junction from being converted to a two-level junction as a possible future project.

Response to Comment PC106-5

Support for the Flower/5th/4th Street station is noted. The Metro Board of Directors voted on October 28, 2010 to designate the Fully Underground LRT Alternative without the Flower/5th/4th Street station as the Locally Preferred Alternative. The deletion of the station was done in an effort to reduce the cost of the project while still meeting the project's purpose and need. An enhanced pedestrian walkway connecting the 4th/Flower Streets area to the existing 7th Street/Metro Center Station would be constructed on Flower Street to improve access to the Financial District. Metro understands the importance of serving the Financial District and believes that the Locally Preferred Alternative still meets the purpose and need of the project despite the station deletion. Deletion of the Flower/5th/4th Street station would result in minimal ridership losses because most riders would use the 2nd/Hope Street station or 7th Street/Metro Center Station, which would service the Financial District. After the October 28, 2010 meeting, the Metro Board of Directors directed staff to meet with the Financial District stakeholders to discuss options for privately funding the Flower/5th/4th Street station, but no funding sources were identified. However, the design of the Locally Preferred Alternative would not preclude a station at 5th and Flower Streets from being built as a possible future, separate project.

RE: Comments on Draft EIS/EIR for Regional Connector

Dear Ms. Roybal-Saltarelli:

As a resident of Savoy on the corner of 1st and Alameda Street and Chair of the Savoy MTA Committee, I like to formally support the **Fully Underground Alternative** that was added into the draft EIS/EIR as the only truly viable build option for this community. I agree with the team's recommendation and endorsement of the Fully Underground Alternative as the "locally-preferred" alternative. 1

One issue I had with the draft was that a letter from the Savoy HOA against the first two build alternatives submitted in the fall of 2009 included over 200 signatures and they were not included or mentioned in the appendix of the draft document. I have had our HOA manager submit that document again in case it is missing so it is either included or cited in the final EIS/EIR. 2

Other continuing issues include my concerns with construction, traffic, and impacts on residents as the project moves forward. I am very concerned for the businesses in Little Tokyo as they add to the quality of life in my neighborhood and are the livelihood of many independent mom-and-pop operations. I ask the MTA to continue to work in protecting the vibrancy of this community through mutual cooperation and adequate mitigation measures. 3

Thank you for your consideration.

Sincerely,

Paul Yeh

Savoy Resident/Savoy MTA Committee, Chairperson

Responses to Comments from Savoy MTA Committee, Yeh, Paul

Response to Comment PC107-1

Thank you for your comment. Support for the Fully Underground LRT Alternative is noted. The Metro Board of Directors voted on October 28, 2010 to designate the Fully Underground LRT Alternative as the Locally Preferred Alternative.

Response to Comment PC107-2

Comment acknowledged. The Final Scoping Report, which was included as an appendix (Appendix G) in the Draft EIS/EIR and this Final EIS/EIR, summarized the CEQA/NEPA scoping process through the close of the NOI/NOP scoping period, May 11, 2009. The signed petitions were submitted after the close of the scoping period, which is why they were not included in the Scoping Report and thus not included in the Draft EIS/EIR. However, Comment Letter CN10, which includes the signed petitions, is included in this volume of the Final EIS/EIR.

Response to Comment PC107-3

Comment acknowledged. Traffic and construction impacts associated with the Locally Preferred Alternative were discussed in Chapter 3, Transportation Impacts and Mitigation, and Section 4.18, Construction Impacts, of the Draft EIS/EIR and this Final EIS/EIR. Metro has coordinated with the Little Tokyo community throughout the design and environmental process of this project. For example, Metro has assisted the community in establishing the Little Tokyo Working Group, provided funding for a consultant to assist the community in understanding the potential project impacts during preparation of the Draft EIS/EIR, and coordinated with community groups during preparation of this Final EIS/EIR. Metro will continue to coordinate with the community during project construction, which will include the development of a community outreach plan to notify local communities of construction schedules, street lane and sidewalk closures, and detours. Appropriate candidate mitigation measures identified in the Draft EIS/EIR have been refined and confirmed in this Final EIS/EIR and the Mitigation Monitoring and Reporting Program for the Locally Preferred Alternative (Chapter 8).

RE: Comments on Draft EIS/EIR for Regional Connector

Dear Ms. Roybal-Saltarelli:

As a resident of Savoy at the corner of 1st and Alameda Street and a member of the Savoy MTA Committee, I like to formally support the Fully Underground Alternative that was added into the Draft EIS/EIR as the only truly viable build option for this community. I agree with the team's recommendation and endorsement of the Fully Underground Alternative as the "locally-preferred" alternative. 1

However, I have several concerns with the Draft EIR/EIS discussion and analysis, particularly as they relate to Underground Emphasis Alternative. By minimizing any impacts from the Underground Emphasis Alternative, the document does not disclose many of the concerns the community raised to prompt the addition of the Fully Underground Alternative. These differences between the Underground Emphasis, and Fully Underground Alternative, are important to document to all stakeholders and decisionmakers as part of this process. A few examples of such discussion are included below: 2

- Potential impacts to Community and Neighborhoods (Section 4.3.3). Table 4.3-4 lists "Physically Divide Community" as a potential impact, and "None" for each Alternative. While "Physically Divide Community" is not defined in this Section, the fact that "none" is concluded for the Underground Emphasis Alternative is in direct conflict with the fact that the grade separation of Alameda Street between Temple Street and 2nd Street, creates a physical barrier between the Little Tokyo and Arts District communities. The need for a pedestrian bridge to cross the intersection of 1st and Alameda Streets only further emphasizes the need for a safe means to cross a physical barrier between communities. 3

- Mitigation measures for Community and Neighborhoods (Section 4.3.4). Additional mitigation measures should be added to address the phasing of construction tunneling along 2nd Street, and the fact that impacts to the Little Tokyo community will be far greater should tunneling work begin on the easterly end of 2nd Street. Stronger language should also be adopted in these measures to provide both clarity to the 4

community and future construction contractors of the importance of these mitigation measures. Such stronger language could include:

> Develop a community outreach plan to notify local communities of construction schedules, road and sidewalk closures, and detours. Coordinate with local communities during preparation of traffic management plans to minimize potential construction impacts to community resources and special events to the greatest extent feasible. Strongly consider limiting construction activities during special events where feasible.
>
> Erect barriers and provide security personnel during construction to minimize trespassing and vandalism. Barriers should be enhanced with artwork and attractive design features where possible.

4 cont'd

- Potential impacts to Visual Resources (Section 4.4). Figure 4.7 depicts significant properties along 1st Street between Judge John Aiso and Central Streets. However, Table 4.4-2 describes operational impacts to Scenic Resources as less than significant. The analysis fails to discuss the pedestrian bridge (approximately two stories in height above grade) may significantly impact the scenic resources of the Little Tokyo historic buildings from an easterly approach or view.

5

I also have general concerns with deferring many construction-related mitigation measures to be developed in the future. If the extent of these construction measures are not included within the analysis of impacts for the original project, how can it be presumed that these future construction mitigation measures will be effective in mitigating such impacts? How will the impacts of these proposed construction mitigation measures be analyzed?

6

Other minor corrections include:

- Figure 4.4-3: Photo is actually of the 1st Street corridor, and not 2nd Street

7

I ask that MTA continue to work the Savoy community and Little Tokyo community to ensure protection of the vibrancy of this community through mutual cooperation and acceptable mitigation measures.

8

Thank you for your consideration.

Sincerely,

Susan Tae
Savoy Resident/Savoy MTA Committee Member
Unit # 376

PC109

Responses to Comments from Tae, Susan

Response to Comment PC109-1

Thank you for your comment. Support for the Fully Underground LRT Alternative is noted. The Metro Board of Directors voted on October 28, 2010 to designate the Fully Underground LRT Alternative as the Locally Preferred Alternative.

Response to Comment PC109-2

As required under NEPA and CEQA, mitigation must be identified which could reduce significant impacts. Chapter 2, Alternatives Considered, of the Draft EIS/EIR discussed the reasons for the addition of the Fully Underground LRT Alternative. The Executive Summary of the Draft EIS/EIR and this Final EIS/EIR contains a summary comparison of the alternatives considered, which includes the Underground Emphasis LRT and Fully Underground LRT Alternatives, and a summary of unavoidable impacts associated with each alternative. Please refer to Responses to Comments PC109-3 through PC109-8, below, for detailed responses regarding concerns raised by the commenter.

Response to Comment PC109-3

As indicated in Section 4.3, Community and Neighborhood Impacts, and Appendix O, Community and Neighborhood Impacts Technical Memorandum, of the Draft EIS/EIR and this Final EIS/EIR, the Underground Emphasis LRT Alternative would not physically divide an established community. Automobiles, pedestrians, and bicycles would still be able to cross the alignment at roadway intersections to access the communities to the north and south. At the intersection of 1st and Alameda Streets in the Little Tokyo community, an automobile underpass would facilitate movement of traffic on Alameda Street by allowing it to travel below the intersection without stopping and, thus, enhancing community mobility. In addition, an optional overhead pedestrian bridge structure would maintain pedestrian and bicyclist access to the north and south sides of Alameda Street and enhance mobility. The Underground Emphasis LRT Alternative would not create a barrier that would impede vehicle, bicycle, or pedestrian access. Vehicle, bicycle, and pedestrian access at the intersection of 1st and Alameda Streets would be maintained as indicated above. Therefore, this alternative would not physically divide a community and impacts would be less than significant. Nonetheless, the Underground Emphasis LRT Alternative is not the designated Locally Preferred Alternative and will not be studied further.

Response to Comment PC109-4

2nd Street in Little Tokyo is no longer under consideration as a potential site for beginning tunnel boring machine operations. Metro intends to insert the TBM from the Mangrove property, located at the northeast corner of 1st and Alameda Streets, away from the community's key business areas. Appropriate mitigation measures presented in the Draft EIS/EIR are candidate measures for further refinement, and are worded as such. The Mitigation Monitoring and Reporting Program for the Locally Preferred Alternative (Chapter 8) of this Final EIS/EIR contains confirmed mitigation measures with more definitive wording and explicit assignment of monitoring responsibilities. These mitigation measures will be confirmed in the Record of Decision.

Response to Comment PC109-5

Impacts to scenic resources in light of the portal area structures for the Underground Emphasis LRT Alternative were discussed in Section 4.4.3.4.2 of the Draft EIS/EIR and this Final EIS/EIR. The Metro Board of Directors voted on October 28, 2010 to designate the Fully Underground LRT Alternative as the Locally Preferred Alternative, which would not have a pedestrian bridge in Little Tokyo.

Response to Comment PC109-6

Mitigation measures identified in the Draft EIS/EIR were not deferred. If any of the build alternatives resulted in significant impacts, mitigation was identified in Chapters 3 and 4 of the Draft EIS/EIR and this Final EIS/EIR to reduce impacts to the maximum extent feasible. In addition, any mitigation measure that could result in an indirect impact was identified in Chapters 3 and 4 of the Draft EIS/EIR. Until a Locally Preferred Alternative is designated by the lead agency, the mitigation measures identified in the Draft EIS/EIR are considered candidate measures. Once a Locally Preferred Alternative is designated, appropriate mitigation measures are refined based on the alternative chosen as the Locally Preferred Alternative and confirmed in this Final EIS/EIR and the Mitigation Monitoring and Reporting Program for the Locally Preferred Alternative (Chapter 8).

Response to Comment PC109-7

Comment acknowledged. The title of Figure 4.4-3 has been revised to accurately describe the location of the photo as follows.

Figure 4.4-3. ~~2nd~~ 1st Street Corridor and the Los Angeles Times Building

Response to Comment PC109-8

Metro has coordinated with the Little Tokyo community throughout the design and environmental process of this project. For example, Metro has assisted the community in establishing the Little Tokyo Working Group, provided funding for a consultant to assist the community in understanding the potential project impacts during preparation of the Draft EIS/EIR, and coordinated with community groups during preparation of this Final EIS/EIR. Metro will continue to coordinate with the Little Tokyo community, including the Savoy residents, during project construction, which will include the development of a community outreach plan to notify local communities of construction schedules, street lane and sidewalk closures, and detours. Appropriate candidate mitigation measures identified in the Draft EIS/EIR have been refined and confirmed in this Final EIS/EIR and the Mitigation Monitoring and Reporting Program for the Locally Preferred Alternative (Chapter 8).

Subject: Regional Connector Draft EIR/EIS Public Comment
Date: Monday, October 18, 2010 2:02 AM
From: Tobias Parkins <tobias0087@gmail.com>
To: Regional Connector <RSC_RegionalConnector@metro.net>

To be included in the Public Comment record for the DEIR/EIS for the Regional Connector:

Dear Ms. Roybal Saltarelli

First, please let the record show my support for the Regional Connector project and it's goals, and the accelerated construction in the 30/10 Initiative. 1

Second, I support the Fully-Underground Alternative for adoption as the Locally Preferred Alternative along with the following recommendations: 2

1. Metro should keep the 5th/Flower st. Station in the LPA.

With the addition of the Expo line soon, and the new ridership created by the Regional Connector, foot-traffic at the 7th St. Metro Center station is going to exceed the capacity of the station, reaching unmanageable levels. The 5th/Flower station will be able to relieve some of the foot traffic, as people traveling to destinations closer to 4th and 5th street will be able to de-board at the new station instead of walking from 7th st. Furthermore, there are several important destinations that would be easily accessible from the 5th st. station, including the Bonaventure Hotel and the Central Library. As a cultural note, it would be a very significant gesture to have our Central Library directly connected to the rail system. This would also mean that students coming from colleges along the rail system, including CSU Long Beach, Citrus College, Santa Monica College, California Institute of Technology, Pasadena City College, and, most importantly, USC, would have a direct, one-seat ride from their respective schools to Los Angeles's most important Library. Although this station is quite close to its neighbor stations, since this is the very dense Downtown Area, having very close station spacing is not a detriment, but in fact a benefit. Since this project will be one of the most important for the LA, and already has a very low cost effectiveness number, there is no reason to be stingy. We should not let a slight lack of money now cause us to have an inadequate transportation system for hundreds of years to come. Metro should seek any way possible to make up the cost of this station, including 3

- value engineering
- phasing the opening of portals
- adopting a slower construction schedule (by as much as a year or 2)
- allowing for public-private partnerships to fund the station
- allowing private businesses to buy development rights to place retail inside stations
- delaying funding and installation of art
- selling advertising rights
- cutting back on advertising for the project
- leverage savings created by 30/10 plan for use on this project
- identify any other ways to cut costs
- identify any other sources of additional revenue

The 5th and Flower station, which should be named the "Central Library" station, will be an important part of the rail network for the county, and is worth taking some extra measures to ensure its existence.

2. Metro should study a way to improve operations at the junctions joining the two branches of the Gold line, and the Blue and Expo Lines.

Due to the use of flat junctions instead of flying junctions, operations at these 2 junctions must be precisely timed in order to ensure on-time performance on both directions of both the North/South and East/West lines. Metro should work to secure funding in the future to convert these junctions to flying junctions (grade-separated) to prevent left-turn motion of opposing trains. 4

3. The name of the 2nd and Central station should be the "Little Tokyo" station.

This should be done to preserve the cultural identity of the neighborhood. 5

Thank you to your team and staff for all of your hard work
Sincerely,
Sam Levey

PC110

Responses to Comments from Levey, Sam

Response to Comment PC110-1

Thank you for your comment. Support for the project is noted.

Response to Comment PC110-2

Thank you for your comment. Support for the Fully Underground LRT Alternative is noted. The Metro Board of Directors voted on October 28, 2010 to designate the Fully Underground LRT Alternative as the Locally Preferred Alternative.

Response to Comment PC110-3

Support for the Flower/5th/4th Street station is noted. The Metro Board of Directors voted on October 28, 2010 to designate the Fully Underground LRT Alternative without the Flower/5th/4th Street station as the Locally Preferred Alternative. The deletion of the station was done in an effort to reduce the cost of the project while still meeting the project's purpose and need. An enhanced pedestrian walkway connecting the 4th/Flower Streets area to the existing 7th Street/Metro Center Station would be constructed on Flower Street to improve access to the Financial District. This enhancement is in proximity to destinations such as the Central Library and the Bonaventure Hotel. Metro understands the importance of serving the Financial District and believes that the Locally Preferred Alternative still meets the purpose and need of the project despite the station deletion. Deletion of the Flower/5th/4th Street station would result in minimal ridership losses because most riders would use the 2nd/Hope Street station or 7th Street/Metro Center Station, which would service the Financial District. After the October 28, 2010 meeting, the Metro Board of Directors directed staff to meet with the Financial District stakeholders to discuss options for privately funding the Flower/5th/4th Street station, but no funding sources were identified. Though the cost-effectiveness index for the project is favorable, Metro will continue to seek additional funds and ways to reduce the costs of the project to bring them in line with allocated funding levels. Metro believes that the Locally Preferred Alternative with an enhanced pedestrian walkway to 7th Street/Metro Center Station would adequately serve the transportation system. However, the design of the Locally Preferred Alternative would not preclude a station at 5th and Flower Streets from being built as a possible future, separate project.

Response to Comment PC110-4

Metro performed a rail simulation for both the single-level junction and two-level junction configurations of the 1st and Alameda Streets intersection. The simulations revealed that both configurations would be able to adequately handle the maximum volume of trains anticipated for the Regional Connector without propagating delays through the system. The two-level junction (Little Tokyo Variation 2) was not pursued for further study in the Draft EIS/EIR because of its potential impacts to the Los Angeles Hompa Hongwanji Temple. The Regional Connector would not preclude the Washington/Flower junction from being converted to a two-level junction as a possible future project.

Response to Comment PC110-5

Metro will undergo a formal station naming process that includes community participation. The stations are referred to in the EIS/EIR by intersection so as to be as descriptive as possible about their locations, but these will not necessarily become the actual station names.

To: Regional Connector
Subject: Regional Connector

Mrs. Dolores Roybal Saltarelli

I along with so many others strongly support the Regional Connector and want to see it built ASAP. The MTA plan after its most recent modification is much improved but the First and Alameda section design needs to be reworked. The MTA design requires several 10 mph curves as well as the use of the current bridge over the I 10 freeway which also has curves requiring slow speed operation. With this new

1

2

design the overall speed can be increased by more than double between the Broadway Station and the Union Station stop. This design provides many advantages over the MTA design with the cost being about the same but will provide a much better and more user friendly design when the project is complete. The biggest advantage of this design will be the almost total lack of disruption during construction to the community west of Alameda and fast easy travel over the eitire connector..

2 cont'd

1. There are no grade crossings.
2. There are no 10 mph curves. All curves are for 35 mph or faster.
3. The Station is conveniently located and requires minimal area disruption during construction with no taking of historical buildings. The Office Depot and mini maul would not have to be taken.
4. The Junction under First St East of Alameda would be separated.
5. The new elevated structure over the 101 and Commercial St could be built in conjunction with the Los Angeles Union Station Run through and the California High Speed Rail projects that will also need to span the 101 and Commercial Streets.
6. The curve on the new line from Union Station to First street will be below ground and will take only a few underground parking spaces of the New Center to be built at the North East corner of first and Alameda.
7. The negative side of this alignment would be the taking of the two

story parking structure at Ducommun and Garey St. and the taking of the 30 foot eastern section of the DWP property north of Temple. Everything else would be underground.

8. During construction a temporary bypass and station could be built on the present parking lot at the north east corner of First and Alameda with a minimum disruption of service. The connection at Union Station would also require minimal service disruption.

9. The boring machines could be placed for drilling on the DWP property and dirt removal could also take place there to avoid any disruption to the Little Tokyo community. The boring machine should be able to make the radius curve from south to west and under First Street to the new Little Tokyo Station site and under the parking lot built on the former AT&SF right of way for a gentle curve onto Second Street. The subway section would begin in the DWP lot and go under Temple St just east of the 500 Temple Building and west of the parking structure to curve from Banning and west of the Nishi Hongwanji Buddhist Temple to the junction under First Street.

10. The current Little Tokyo Station at First and Alameda would remain in use as a turn back for trains on the Foothill extension that would not be continuing west to Culver City and Santa Monica.

11. Any passengers that would want to go to or from Union Station, Pasadena and East from East First Street would have a simple cross platform transfer at the new Little Tokyo Station.

2 cont'd

The 5th & Flower and 2nd and Broadway Stations need to be part of the original design, but if funding is not available then the underground station “boxes” should be built with the line and the stations can then be added later “as needed”. The same goes for the Crenshaw station on

3

the Purple line when it is built. 3 cont'd

Please consider this design for all of the all of the reasons shown and when this project is complete you and all involved can look back and be proud and not have to apologize for a design that is less than it could or should have been. 4

Thank you for my consideration

Responses to Comments from Fishel, Alan

Response to Comment PC111-1

Thank you for your comment. Support for the project is noted. The Metro Board of Directors voted on October 28, 2010 to designate the Fully Underground LRT Alternative as the Locally Preferred Alternative.

Response to Comment PC111-2

As described in Chapter 2, Alternatives Considered, of this Final EIS/EIR, the alignment in Little Tokyo has been refined to increase curve radii and allow for higher speed train operation through the curves. The refinements would also reduce cut and cover excavation within Little Tokyo and increase tunnel boring machine use, thereby reducing impacts to the community. The Regional Connector would connect to the existing bridge over the US 101 Freeway, but would not preclude improvement from being made to this bridge as a possible future project. The design shown in the comment would involve greater impacts to the City of Los Angeles Department of Water and Power facilities, which the Locally Preferred Alternative alignment would avoid. Metro appreciates the submission of the detailed conceptual alignment.

Response to Comment PC111-3

The Metro Board of Directors voted on October 28, 2010 to designate the Fully Underground LRT Alternative without the Flower/5th/4th Street station as the Locally Preferred Alternative. The deletion of the station was done in an effort to reduce the cost of the project while still meeting the project's purpose and need. An enhanced pedestrian walkway connecting the 4th/Flower Streets area to the existing 7th Street/Metro Center Station would be constructed on Flower Street to improve access to the Financial District. The design of the Locally Preferred Alternative would not preclude a station at 5th and Flower Streets from being built as a possible future, separate project. The proposed Metro Purple Line extension is part of the separate Westside Extension project.

Response to Comment PC111-4

Comment acknowledged. Please refer to Responses to Comments PC111-1 through PC111-3, above, for detailed responses regarding concerns raised by the commenter.

Subject: Support of Fully Underground Alternative for the Light Rail Regional Connector

To the Metro Regional Connector Team and Metro Staff:

Please accept this email as a letter in support of the Fully Underground Alternative for the Downtown Light Rail Regional Connector. This alternative appears to be the most cost-effective and long-term alternative to support the needs of Downtown Los Angeles City/County as well as the other regions throughout the County that will benefit from this Connector. This is in many ways a "missing link" to the downtown transit puzzle and worthy of the investment of resources needed to make its construction and completion possible. 1

Thank you for your consideration.

Sincerely,

Barbara Broide

Subject: Regional connector question.

This is the public info that is listed concerning the Regional Connector project.

Questions? If the project is listed as 1.32 billion and the latest numbers I see are 1.24 billion, why is this project short money and the 5th and Flower station may need to be omitted?

The list below shows the entire budget accounted for. Is the local funding not taken care of?

Regional Connector (links local rail lines)

$ 1,320 total costs

$ 160 Minimum Measure R

$ - additional

$ 160 Total

$ 708 Feds

$ 186 state

$ 266
b Local funding

FY 2014-16 FY 2023-25
b. Systemwide ridership forecasts indicate need for a Regional Connector downtown. This expenditure plan assumes that Metro Long Range Transportation Plan funds freed-up from the Exposition Phase II project by passage of this sales tax will be redirected to the Regional Connector project by the Metro Board.

PC113

Responses to Comments from Downtown Los Angeles Neighborhood Council, Brown, J. Russell

Response to Comment PC113-1

The $1.32 billion figure represents the budgeted cost of the project in year of expenditure (escalated) dollars. $1.24 billion would be the projected cost of the four-station alternative in 2009 (non-escalated) dollars, which is equivalent to $1.44 billion in escalated dollars as was shown in Table 6-1 of the Draft EIS/EIR. This indicates a desire to bring the projected cost of the project in line with the budgeted amount. The financial information in the Draft EIS/EIR included the Measure R allocation to the Regional Connector.

PC115

Responses to Comments from Japanese American Cultural and Community Center, Handa, Toshio "Terry"

Response to Comment PC115-1

It is noted that the commenter supports the Fully Underground LRT Alternative and opposes the other alternatives. The Metro Board of Directors voted on October 28, 2010 to designate the Fully Underground LRT Alternative as the Locally Preferred Alternative.

A description of cut and cover operations is provided in Chapter 2, Alternatives Considered, Section 4.18, Construction Impacts, and Appendix K, Description of Construction, of the Draft EIS/EIR and this Final EIS/EIR. Cut and cover entails a construction shoring system, excavating down from the ground surface, placing a temporary deck over the excavated area, constructing the underground facilities beneath the deck, and then backfilling and restoring the surface once the facilities are completed. Temporary concrete decking can be placed over the cut immediately following the first part of excavation (at about 12 to 15 feet below ground surface) to allow traffic to pass above. Once the deck is in place, excavation and internal bracing would continue to the required depth. Once the desired construction is completed inside the excavated area, the deck would be removed, the excavation would be backfilled, and the surface would be restored permanently. Refinements have been made to the Locally Preferred Alternative since publication of the Draft EIS/EIR. These refinements would reduce the extent of cut and cover activities and associated street lane and sidewalk closures. Chapter 2, Alternatives Considered, of this Final EIS/EIR identifies locations where cut and cover would occur during construction of the Locally Preferred Alternative.

Chapter 3, Transportation Impacts and Mitigation, and Section 4.2, Displacement and Relocation, of the Draft EIS/EIR identified the number of on-street and off-street parking that would be removed during construction and operation of each alternative, respectively. Chapter 3, Transportation Impacts and Mitigation, and Section 4.2, Displacement and Relocation, of this Final EIS/EIR identifies the number of on-street and off-street parking that would be removed during construction and operation of the Locally Preferred Alternative, respectively.

Responses to Comments from Little Tokyo Community Council & Tokyo Villa HOA, Nishimura, Howard

Response to Comment PC116-1

Appropriate candidate mitigation measures included in Section 4.3, Community and Neighborhood Impacts, of the Draft EIS/EIR and confirmed in the Mitigation Monitoring and Reporting Program for the Locally Preferred Alternative (Chapter 8) of this Final EIS/EIR includes development of a community outreach plan to notify local communities of construction schedules, street lane and sidewalk closures, and detours. Metro will continue to coordinate with the community during project construction.

RE: Comments on Draft EIS/EIR for Regional Connector

Dear Ms. Roybal-Saltarelli:

As a resident of Savoy on the corner of 1st and Alameda Street, I would like to formally support the **Fully Underground Alternative** that was added to the draft EIS/EIR as the only truly viable build option for this community. I agree with the team's recommendation and endorsement of the Fully Underground Alternative as the "locally-preferred" alternative. 1

I also want to voice my concerns about construction, traffic, and related impacts on residents as the project moves forward. I ask the MTA to work to protect the vibrancy of this community through mutual cooperation and adequate mitigation measures. 2

Thank you for your consideration.

Sincerely,

Savoy Resident
Unit # 468
MYUNGHEE BYUN

PC117

Responses to Comments from Byun, Myunghee

Response to Comment PC117-1

Thank you for your comment. Support for the Fully Underground LRT Alternative is noted. The Metro Board of Directors voted on October 28, 2010 to designate the Fully Underground LRT Alternative as the Locally Preferred Alternative.

Response to Comment PC117-2

Comment acknowledged. Traffic and construction impacts associated with the Locally Preferred Alternative were discussed in Chapter 3, Transportation Impacts and Mitigation, and Section 4.18, Construction Impacts, of the Draft EIS/EIR and this Final EIS/EIR. Metro has coordinated with the Little Tokyo community throughout the design and environmental process of this project. For example, Metro has assisted the community in establishing the Little Tokyo Working Group, provided funding for a consultant to assist the community in understanding the potential project impacts during preparation of the Draft EIS/EIR, and coordinated with community groups during preparation of this Final EIS/EIR. Metro will continue to coordinate with the community during project construction, which will include the development of a community outreach plan to notify local communities of construction schedules, street lane and sidewalk closures, and detours. Appropriate candidate mitigation measures identified in the Draft EIS/EIR have been refined and confirmed in this Final EIS/EIR and the Mitigation Monitoring and Reporting Program for the Locally Preferred Alternative (Chapter 8).

Los Angeles, California, Tuesday, September 28, 2010

6:30 p.m.

MS. KERMAN: Good evening, everybody. Can you hear me in the back? I'd like to thank you all for coming tonight. This is a very, very exciting moment for us because we reached a milestone on this project, and we'll be talking more in detail about that milestone.

But in order to get to that milestone, it was really because of community involvement and lots and lots of meetings and lots and lots of time spent by a variety of individuals, and I'd like to thank the community for allowing us to get to this day, which is the public hearing for the regional connector.

Among those community organizations that were so instrumental in making this happen were the Little Tokyo Community Counsel, the Little Tokyo Service Center, the Buddhist Temple, the Japanese Chamber of Commerce, the Downtown Los Angeles Neighborhood Council, the Lincoln Heights Neighborhood Council, the Historic Cultural Neighborhood Council and many others.

So I would like to take this moment, before we get any further, to thank the community and all of you

that are here today for allowing us to get to this moment,

for allowing us to get through the process that included our alternatives analysis and, today, our Draft EIS/EIR process.

I'd like to bring up Chris Komai, who is with the Japanese American National Museum to welcome you all here today. This is their facility. They're our host.

And Chris, if you could step forward.

MR. KOMAI: That's great. I didn't know any of my family was here. I'm Chris Komai. I'm the public information officer for the Japanese American National Museum, and we did want to welcome you all to our facility.

You're in the George and Sakaye Aratani Central Hall of our pavilion, which opened in 1999. It's interesting because this year is the year of anniversaries, so it's the Japanese American National Museum's 25th anniversary since its incorporation back in 1985.

What's interesting about that is if you had known us in 1985, no facility, no endowment, one staff member sitting at the local Merit Savings Bank here, but because we were a community-based organization, we were able to galvanize the support of our community and the greater community here in Los Angeles, renovate the former

25 Buddhist temple behind you, the Nishi Hongwan, former

Buddhist Temple there, and here, this pavilion, which actually was a $45 million project.

All of that has made it possible to do what its founders wanted, which is to have public gatherings like we're having today. We think, here at the museum and certainly within our community, that the most important thing that we can do is get together and discuss what are the important issues of the day.

Now, before we get on to the meeting, I have just one thing. I noticed we're being streamed tonight. Isn't that right? And for those of you who are watching, we invite you to come to Little Tokyo, come to the Japanese-American National Museum, come here because there are times when you can come and share in our community as well.

The space that we're in right now, we have Target's Free Family Saturdays, most months, and like the word says, it's free. You can come, even on the Gold Line because the station is right across the street from us over here, and there are many activities that we have here, Nisei Week, New Years and things like that for you where we can all come, and we all invite you to come to them.

The last thing I wanted to say is that speaking

of anniversaries, today we celebrated the 10th anniversary

of Little Tokyo Community Council, ten years in which our community has tried to work together, not just in Little Tokyo, but in the greater area.

In this hearing here, in this meeting, this is really an example of how that should work. Here we're dealing with a very important process, but the most important thing is that we have a place and an opportunity for us to meet and talk about those issues.

So thank you all for coming. Welcome. If any of you want to come any other time, come and see me.

Thank you.

MS. KERMAN: Thank you so much, Chris, and we do appreciate your hospitality.

Well, let's get started. Good evening. Welcome to this public hearing on the Regional Connector Transit Corridor Project Draft EIS/EIR. My name is Ann Kerman. I'm Metro's constituent program manager for this project and tonight I will be facilitating the meeting, and I will also be acting as your hearing officer.

Is there anyone in need of translation assistance? If so, if you would please advise our registration in the back, and I would also like our interpreters to make that announcement. Alex. Thank you very much.

Before we begin, I do want to introduce you to

the project manager of this project. You'll be hearing from her shortly, and that's Dolores Roybal-Saltarelli. Dolores, if you could stand up. Diego Cardoso, who is the executive officer from our planning department. Diego.

We have several people here from Metro and our consultant team, and we're all wearing these badges. To everyone in that group, I'd like to introduce you individually, but I want to move it along. Please wave your arm, and you can speak to any of us later. We are here until 8:00 tonight, and after the formal presentation, we'll still be here to take your comments and questions.

Well, tonight's meeting is a formal process in the environmental review of the connector project, and we have a legal obligation to make sure that we hear your comments on the Draft EIS/EIR. We're here tonight to hear from you, and we want to give everyone a chance to speak.

Now, because this is a formal process and formal public hearing, we will not be answering your questions, but we will certainly be recording every comment, every question. We have a court reporter here this evening, and she will be taking note of every word.

You may comment on the Draft EIS/EIR at tonight's the meeting during our formal comment session, or you may

fill out a comment card. You may also mail us a letter or

send us an E-mail. All public comments must be received by 5:00 p.m. on October 18th.

As this is a formal NEPA/CEQA process, I now need to provide you with the following statement: The Regional Connector Transit Corridor Studies Draft Environmental Statement and Environmental Impact Report was released on September 3rd, 2010 along with the notice of availability and notice of intent to hold public hearings.

To comply with the National Environmental Policy Act, NEPA, and the California Environmental Quality Act, CEQA, Section 15087, the Federal Transit Administration, FTA, and the Los Angeles Metropolitan Transportation Authority, METRO, have prepared a draft environmental impact statement, environmental impact report. FTA is the lead agency for the purposes of NEPA, and METRO is the lead agency for the purposes of CEQA.

A notice of availability and an intent to hold public hearings was published in the Federal Register, State of California Clearinghouse, Los Angeles Times, La Opinion, Nikkan San, and filed with the Los Angeles County Clerk and the California State Clearinghouse. The notices were published on September 3rd, 2010.

Copies of the Draft EIS/EIR are available for public review between September 3rd and October 18th, and

are located at the following venues: The Los Angeles City

Public Library, Central Library, Little Tokyo Branch Library, Chinatown Branch Library, the Von Kleinschmidt Center at the University of Southern California, the Pasadena Central Library, East Los Angeles Library, Culver City Library, Santa Monica Library and of course, Metro's library, the L.A. County Metropolitan Transportation Authority Agency's library on our 15th floor.

In addition, electronic copies of the document, i.e., CDs, were distributed by mail to participating agencies, listed owners of properties identified in the document, local elected officials and additional interested stakeholders.

Display ads about the public hearings were published in Our Weekly, Eastside Sun, Downtown News, Korea Times, Korea Daily, blogdowntown, Japanese Daily, Nikkan San, The Rafu Shimpo and the Pacific Citizen.

Copies of the press release about the release of the Draft EIS/EIR were sent to a distribution list of over 50 media organizations. The Draft EIS/EIR and information about the hearing is posted on Metro's Web site, www.metro.net.

Information about the release of the Draft EIS/EIR and the hearings were also printed in brochure

form and widely distributed on Metro buses and trains as

well as hand delivered at key locations in the study area.

In addition, brochures that we commonly called "Take Ones" were sent by U.S. Mail to a list of over 65,000 contacts in the project study area. The statement information was also sent electronically to a distribution list of 1,725 mailings.

All of these materials included information about how to find the Draft EIS/EIR as well as more information about the Regional Connector Transit Corridor study on the Web. Affidavits of publication and copies of detailed mailing lists are available upon request.

And now for the fun part. I would now like to bring up our project manager, Dolores Roybal-Saltarelli and invite her to begin her presentation.

MS. ROYBAL-SALTARELLI: Good evening everyone. Thank you very much for taking the time to attend this public hearing. My presentation is going to be brief. We're here this evening to listen to you, to document your comments on the draft environmental document and with that, I'll get started.

Regional connector is one of seven projects that is a part of the Measure R projects that are moving forward and is part of our 2035 plan. The purpose and need of the regional connector is to improve public

transit service and mobility, directly connect the Metro

Gold, Blue and future Expo Line, improve rail travel times and reduce transfers by providing a one-seat ride between Azusa and Long Beach and Santa Monica and East Los Angeles and provide increased high-capacity transit coverage of Downtown Los Angeles with the new stations.

Our need: Continued growth in population and transit demand, both in downtown and across the region transit system expansion, will also bring more riders into downtown. The existing rail system requires multiple transfers for many trips, both local and regionally.

Project overview: As I mentioned earlier, the regional connector will be connecting the Metro Blue, Gold and Expo Line; will provide a one-seat ride for travel between Azusa and Long Beach and Santa Monica and East L.A. and ultimately provide an efficient manner to travel through the downtown as well as the rest of the region.

Project development: We initiated this process in '07 with alternative analysis where we looked at 36 alternatives. It was the end of that process that recommended two build alternatives that will be a part of the draft, and we initiated the draft environmental document in January of 2009.

Due to all of your hard work and participation,

we're now at the conclusion of the draft, and we're here

to listen to your comments and ultimately continue to study through the final environmental document, which will be initiated in November.

Project progress: When we started in '07, this study did not have any potential funding. With the passage of Measure R, we do have some Measure R funds dedicated to this project. We also initiated the draft in January of 2009.

We've been working extensively with the communities in the project study area. We've also been able, in that process through the Little Tokyo community, to include an additional alternative that's a part of the draft.

We've also been able to look at extensive potential mitigation measures that were also included in the draft and ultimately have been able to release that in the draft environmental document that was released on September 3rd, which many of you have received.

The draft environmental document has five alternatives that need to be analyzed. The No Build. What will the project study area be like without the project in place? The Transportation System Management alternative. That is the project that uses the comparison of what you could do without building permanent

infrastructure, and the three build alternatives. The

at-grade emphasis light-rail alternative, the underground emphasis alternative, and the fully underground light-rail transit alternative that is included in the -- excuse me.

This is interesting. I apologize. I guess all of the maps are like this. My apologies. It didn't look this way 30 minutes ago. Luckily for us, we do have the three build alternatives on the board, and the TSM alternative. What we're recommending is two additional bus routes essentially to connect 7th Street/Metro to the existing Little Tokyo/Arts District station.

The next alternative, which is the at-grade alternative is connecting the 7th Street/Metro station to the existing Little Tokyo/Arts District. And many of you have seen this alternative before. What's important to know -- oh, there we are. Thank you.

As I was saying, connecting 7th Street/Metro Center station to the existing Little Tokyo/Arts District station. What's unusual about this alternative is that 50 percent of it is underground. That's what you see in purple, because ultimately you're connecting 7th Street/Metro, which is an underground station, to an as to be completed at, possibly, 1st and Alameda.

The next alternative is the underground emphasis alternative, which, as stated in the alternative analysis

document, is about 94 percent underground. Again, leaving

7th Street/Metro, underneath Flower, underneath the 2nd Street tunnel, and underneath 2nd Street, moving west towards Little Tokyo with an at-grade connection at 1st and Alameda to connect to the Little Tokyo/Arts District station.

The fully underground alternative is exactly the same alignment, except where it differs is in the Little Tokyo area. Instead of connecting to the existing Little Tokyo/Arts District station, we now have a station located at 2nd and Central. You're now underneath 1st and Alameda, and it includes two portals, one north of Temple and one between Alameda and Hewitt to connect to the existing at-grade Gold Line.

The fully underground alternative has four stations, one at 5th and Flower to access the Financial District, one at 2nd and Hope to access Bunker Hill, one at 2nd and Broadway and the fourth at 2nd and Central.

As Ann mentioned earlier, there's various ways for you to submit comment, either at this evening's public hearing -- we will have a second one on October 4th. You can also submit comments to me in writing and via our website as well as our E-mail.

There are two big important meetings that are coming up in this project. We'll be going to the

Measure R Project Delivery Committee on October 21st at

9:00 a.m., if you'd like to attend and provide comment. The same item will be going towards our Metro Board scheduled for October 28th at 9:30.

With that, that concludes my presentation, and we're here to listen to you and to document your comments on the draft environmental document.

MS. KERMAN: Thank you, Dolores.

As we quickly set up to take your comments, I did see that Kim Tachiki came in, and we'd like to thank her for representing Congresswoman Lucille Roybal-Allard.

Thank you, Kim. We have so appreciated all the support that we've had from her office and other electives, so I did want to mention that.

So as we quickly set up to take your comments, please note that the format for tonight's hearing does not include dialogue or our response to your statements or questions. If you would like to speak, we request that you fill out a speaker card, and you can turn them into the registration desk. If you don't have a speaker card and would like one, raise your hand, and we'll be sure to get you one.

The purpose of this hearing is for Metro to receive your comments and input on the Draft EIS/EIR. As I mentioned earlier, this hearing is part of the formal

NEPA and CEQA process. Your statements will become part

of the public record and will be addressed in the final document, which we currently expect to release in the summer of 2011.

In addition to oral testimony received tonight, all written comments will be addressed in the final EIS/EIR. So you have an option of speaking tonight or providing your comments by mail, E-mail or filling out a comment form and submitting it at tonight's meeting.

All comments will be addressed with equal attention. All comments will be communicated to the Metro Board and to the FTA and ultimately the Metro Board and FTA will use the final EIS/EIR containing your comments and our responses in making their final decision on the regional connector project, including an adoption of a locally preferred alternative.

When you're called to the microphone, before you begin your statement, if you could please state your name clearly for the record. You have two minutes, and we'll have a time clock up on the screen and four minutes if you require translation.

If you have a prepared statement, we encourage you to leave that with a member of our staff, and as I said earlier, oral and written comments will be considered equally.

In order to fit your comments into the public

record, your comments must be received by Metro before the close of the comment period, which we mentioned is October 18th. Comments, again, may be submitted via E-mail, mail, et cetera, and we'll repeat that at the end of the meeting.

And at this point, this is your time. We're going to turn it over to you.

Ginny, do you have some comment cards? I'm going to call you up three at a time so you can be prepared. The mic is in the center of the room, and our first speaker is Alan Fishel, followed by Mike Okamoto, representing the Japanese Chamber of Commerce and then Wilson Liu, representing the Little Tokyo Business Association, Little Tokyo BID.

PHA1

MR. FISHEL: Good evening. My name is Alan Fishel. I've been following this project from the very beginning, and I want to comment on Dolores and the staff for doing one heck of a job in a very short time. The services were certainly put together not just so it's possible that the underground route would be the only selection.

1

The original route that was picked was not all that good, but thanks to the community here and their oversight, the route was changed for Alameda to be underground, fully underground, and that's a great job.

PHA1
cont'd

25 You guys have done one heck of a job.

1
cont'd

PHA1
cont'd

But I think that -- I know the Alameda/1st Street intersection could be improved considerably. The present design requires four 50-mile an hour curves, slow into the stations, slow out of the station, and the overall design is not done by people who are really familiar and use transit, and the lines need to be straight.

And there is a way of having a much faster, much straighter, much better way of handling the 1st and Alameda intersection, and also the ability to have the station literally between Alameda and 2nd and Central, so it would be very easy for access.

It's a much better location for community, for this community, to be able to have access to 1st Street and the Little Tokyo community along 1st Street, so the overall design can be improved just a little bit for about the same amount of cost, but the impact will be very, very different, and the outcome would be ideal.

I prepared a map to show how it's going to be done. It's in the hands of the staff here, and I urge you to look at the possibilities of making this a better line. 2

MS. KERMAN: Thank you, Mr. Fishel.

Mike Okamoto, followed by Wilson Liu, followed by Greg Kay.

PHA2

MR. OKAMOTO: Good evening. My name is Mike Okamoto 1

PHA2
cont'd

with the Japanese Chamber of Commerce. I spent a very | 1
cont'd

PHA2
cont'd

quiet afternoon in the library flipping through the pages of the EIS/EIR. It's a lot, seven volumes. It's a lot of pages, and through looking at those, I fully support the fully underground alternative.

1
cont'd

But at the same time, I noticed that with the at-grade option, 11 out of 18 intersections in the morning and 15 out of 26 intersections will be adversely impacted traffic-wise. Also, the underground emphasis option has two out of three intersections in the morning and three out of seven intersections in the peek evening hours that would be adversely impacted, and these numbers are really scary, and I don't think this is less than significant; this is pretty significant.

2

Also, when we look at the no build option, there was 69,000 tons, metric tons, of greenhouse gas reduction, which is a significant amount. Just to visualize it, it's a football field with a six- or seven-story building filled with water. That's how much 69,000 tons of greenhouse gas is. That's in terms of water as a weight, and with the no build option, we will be losing the chance to reduce that much greenhouse gas emission.

So as a responsible citizen, I think it is important for us to look into the future generations. Just like the glass door of this room shattered into

3

PHA2
cont'd

pieces yesterday, and that's because of the unusual heat.

3
cont'd

MS. KERMAN: Thank you, Mike.

MR. OKAMOTO: Thank you very much.

MS. KERMAN: Wilson Liu, representing Little Tokyo Business Association, followed by Greg Kay, followed by Wilson Liu, representing the Cherry Land Company.

PHA3

MR. LIU: I'll try to consolidate all four of my presentations here, but I don't want to deal with it in my time. Otherwise --

MS. KERMAN: I wanted to break you up a little bit.

MR. LIU: My name is Wilson, and I'm currently up here now representing two entities, the Little Tokyo Business Association and the Little Tokyo Business Improvement District. I have a joint statement from both the association and the BID, which is our position, which is dated September 28, 2010.

1

Metro staff. On May 1st 2009, Little Tokyo Business Association submitted to Dolores Roybal-Saltarelli their support for the underground emphasis alternative with the station location at 2nd Street, between Los Angeles and San Pedro Street, along with the list of concerns with mitigating measures that will be implemented and documented in the final environmental impact statement, the final impact report.

In light of the current efforts by the

Little Tokyo Community Council and the Nikkei Center

PHA3
cont'd

developers, the property owners of businesses on 1st Street, Alameda Street, 2nd Street and Central Avenue and adjacent property owners, businesses, non-profits and residences adjacent to the intersection of 1st and Alameda Streets, Metro staff expected a fully underground alternative to be designated as a locally preferred alternative in the current Draft EIR.

The Little Tokyo Business Association and the Little Tokyo Business Improvement District has never taken formal action on the fully underground alternative. In light of the additional fully underground and the release of the Draft Environmental Impact Report, the Little Tokyo Business Association, the board of directors and the advisory board need to revisit the build alternatives, construction impacts and mitigation issues, solutions which require implementation and documentation in the final EIS/EIR.

1
cont'd

On September 22nd, both boards held joint sessions, which we have identified four particular issues that are really important to us. We, at this point on the locally preferred alternative as far as the board is concerned, have rescinded support for the underground alternative pending --

MS. KERMAN: Thank you, Wilson. Is your

PHA3
cont'd

representation of these other companies a continuation

1
cont'd

of that letter, or are they separate letters?

MR. LIU: It is. If you will allow me, I would like to submit them to you now.

MS. KERMAN: Absolutely.

MR. LIU: I will waive all the rest of the time.

MS. KERMAN: Okay. We'd be delighted. Thank you.

Next, Greg Kay, followed by Charles Adelman, followed by Alan Havens.

MR. KAY: Hello. My name is Greg Kay, and I was delighted to see the addition of the all underground alternative. I think that's the only thing that makes sense, as far as having two separate lines traveling on the same route, which should not have grate crossings.

The only thing that I don't like about the alternative is the lack of service to the central city. It seems that that's a little neglected. I thought I remembered an alternative that had a station between San Pedro and Los Angeles, but it seems to me it's important to build also for the future, where future development might occur, rather than concentrating on where it already is.

Thank you very much.

MS. KERMAN: Thank you, Mr. Kay.

Charles Adelman, followed by Alan Havens,

PHA3 cont'd
1 cont'd
PHA4
1
2

followed by Nate Zablen.

PHA5

MR. ADELMAN: Hi. My name is Charles Adelman. I'm an L.A. native and used to work in Little Tokyo many years ago. Now I work all over the place, including down in the L.A. Live area.

Two comments. Generally, this is the only project being considered by any agency for downtown that will actually improve mobility in the downtown area, provided that we do the entirely underground option. L.A. is too dense to be running trains down the middle of the street, and especially not in that kind of a way. 1

My second comment is a more technical thing. An alternative that was considered and rejected, which would be a variation on it, which would make the junction over here at Alameda over/under rails, rather than two tracks side-by-side. The over/under is the only way to create a safe junction for two and a half minute headway trains.

Side-by-side means that the train making the turn is going to be crossing the other track with the potential for two trains colliding in the event that either the signals fail or the driver misses the signal. And as we know, both of those things have been known to happen. 2

Just recently, an MTA Blue Line train plowed into a bus because the driver of the train missed the signal. There was an event in Washington, D.C. earlier this year,

I think it was, that they had a big Metro accident because

PHA5 cont'd
2 cont'd

the signals failed.

Thank you.

MS. KERMAN: Thank you, Mr. Adelman.

Alan Havens, followed by Nate Zablen, followed by William Briones, representing the Los Angeles Buddhist Temple.

PHA6
1

MR. HAVENS: My name is Alan Havens. I'm a train advocate, retired from Skagit Transit. I fully support MTA's fully underground LRT alternative. I can accept a real opinion on what's done at the 5th Street and Flower station. I would note that it might better facilitate a center pocket track between 6th and 3rd, something like that.

2

I recommend in addition to the Little Tokyo underground station, maintaining the Watts line, the existing Union Station as well. I support the surface track in some way, shape or form for the following reasons: One, for maintenance connections.

Two, for possible use of additional pocket tracks.

Three, it might facilitate some special events running between Pasadena and East L.A.

Fourth, in the future, if we get that line out to Whittier -- I might mention Norwalk -- it might

3

PHA6
cont'd

let some trains to go directly to the station, and

3
cont'd

fifth, looking real far into the future, if the 60 Freeway service might be capable, I think we'd have to use something like this, this surface track, to go to Union Station without congesting the main downtown connector with too many LRT lines.

MS. KERMAN: Thank you, Mr. Havens.

Next, Nathan Zablen, followed by Bill Watanabe.

MR. ZABLEN: Good evening. I'm Nate Zablen. I'm a member of the Southern California Transit Advocates, but I'm speaking for myself. Generally, I support the all underground alternative. I think that's the best way to connect these lines because downtown has a lot of traffic, and there's going to be a lot of interruptions, so it's important so you can build up kind of a good speed on the train, so it's best if they go underground.

As far as the exact location of the station, I'm not a resident of Little Tokyo, so I would definitely defer to the residents of Little Tokyo and the business people in exactly how that station should be built. For those people, though, that live in the other parts of Los Angeles County, it's one way to connect.

We have a lot of rail in L.A., but it doesn't really connect, so here it is, giving people the opportunity who live in the northern part of the county,

PHA6 cont'd
3 cont'd
PHA7
1
2
3

PHA7
cont'd

live in Azusa, Pasadena and go all the way to Long Beach.

3
cont'd

PHA7
cont'd

And those people who live in East L.A. can now go to Santa Monica.

At the present time, we really don't connect. We've got all of these lines, but we have to transfer, so it really is inconvenient. This could really be a breakthrough. I only hope that there is funding for it, and it has to be done.

3
cont'd

Thank you very much.

MS. KERMAN: Thank you, Mr. Zablen.

William Briones, representing the Los Angeles Nishi Buddhist Temple, followed by Bill Watanabe, followed by Yukio Kawaratan.

PHA8

MR. BRIONES: Good evening. I'm William Briones. I'm one of the ministers at the Los Angeles Hompa Hongwanji Temple.

This afternoon at the LTCC meeting, there was a vote, and I'll let Bill Watanabe give the results, but we are part of LTCC. Our temple is located on the corner of Vignes and 1st Street, right pass the 1st Street bridge, right there.

We've been impacted by light-rail, and it was inconvenient, but now it's very nice. We enjoy the train being our neighbor. However, we are concerned with the portal that is being planned to be put on 1st Street. We

1

PHA8
cont'd

do have property that goes to the end. I believe it's

1
cont'd

PHA8
cont'd

Garey Street and then Hewitt, so our property line ends at Garey, and the plan is to bring the portal to Hewitt. Hopefully, that portal does not infringe on our property. We just built a new building, and that is our concern.

1 cont'd

Otherwise, we are in total favor for the underground light-rail, as Bill Watanabe will attest to.

2

MS. KERMAN: Thank you so much, Reverend.

Bill Watanabe, representing the Little Tokyo Community Council, followed by Yukio Kawaratan and then Russ Brown.

PHA9

MR. WATANABE: My name is Bill Watanabe, and I'm currently the chair of Little Tokyo Community Council, and also I'm the executive director of Little Tokyo Service Center, and I also happen to chair Little Tokyo Historical Society.

The Little Tokyo community has had a number of meetings throughout the past few months. Many, many meetings, many discussions, looking at all the alternatives, looking at all the different ways that we could consider the community and its impact.

And today at the Little Tokyo Community Council meeting, we did approve a letter, which will be sent to Dolores, and you should be getting it, but I'd like to just touch on some of the main points.

1

PHA9
cont'd

25 Number one: We support the fully underground | 1
cont'd

PHA9
cont'd

option. We feel that that's the best one, and we'd like to have the Metro Board consider that. We feel that 1st and Alameda and the treatment of it as proposed originally divides the community having Alameda being such a busy, big road with all of this traffic to go underground with bridges, we just felt it was not feasible.

1
cont'd

We want to urge the boring of the subway under 2nd Street be done from west to east. In my mind, there's a big hole where the state building used to be. It seems like the idea was to put a bunch of dirt in there.

2

We feel that Metro has given us a great start in terms of meeting with us, discussing with us. The community would like to continue that process, to be a part of the discussions and decision making from here on out in terms of the decisions by the Board and also to ask for mitigation to minimize or compensate for business losses.

3

Thank you very much.

MS. KERMAN: Thank you, Bill.

Yukio Kawaratan, followed by Russ Brown, followed by Joel Covarrubias.

MR. KAWARATAN: That's pronounced Kawaratan.

PHA10

The regional connector is a worthwhile project, but only if the fully underground locally preferred

1

PHA10
cont'd

alternative is selected by the MTA Board. The Draft

1
cont'd

PHA10
cont'd

EIS/EIR correctly states that the Little Tokyo community, in comparison to all other areas along the route, will suffer many disproportionate adverse impacts during the construction. 2

Hopefully, the draft will be modified to include more effective mitigation measures to lessen the economic suffering, and in some cases the demise of Little Tokyo businesses. 3

The draft does not adequately address the adverse impacts of the underground emphasis alternative it would impose on Little Tokyo. 4 For instance, the Alameda underpass will adversely impact Little Tokyo traffic during and long after construction. 5 Four surface rail tracks at 1st and Alameda will create dangerous conflicts between pedestrians, vehicles and trains. 6

A proposed pedestrian bridge will be a permanent visual plight and liability. 7 The Little Tokyo pedestrian movement are all at sidewalk level. Who will want to go up 20 feet by stairs or elevator, cross 100 feet across Alameda and then go down 20 feet? People will, instead, take their chances. With trains coming frequently from four tracks in four different directions, some will be injured or killed. 8

These are just some of the reasons the Japanese 9

PHA10
cont'd

American community cannot accept the underground emphasis

9
cont'd

alternative. I urge the MTA Board to approve the fully underground locally preferred alternative.

Thank you.

MS. KERMAN: Thank you, Mr. Kawaratan.

Russ Brown, representing the Historic District, BID, followed by Joel Covarrubias, followed by Patti Berman.

MR. BROWN: Russ Brown, Historic Downtown Business Improvement District of the L.A. City chapter. I think the gentleman before me -- I won't try to pronounce his name, much less spell it -- did an excellent job of understanding the really horrible problems of the above ground emphasis and the partially underground.

We especially want to thank the team. You all worked with the neighborhood council. You worked with the community for almost four years on this. I remember the very, very beginning when there was no money, there was no chance that any of this was going to happen, and today to see the community involvement and how this is really going through the process.

We're very much in support of the fully underground project. Especially, the 2nd and Broadway station, which will connect with the streetcar and will connect with the Red Line at the Civic Center, the 5th and

PHA10 cont'd
9 cont'd
PHA11
1
2
3
4

Flower station, which will also connect with the 5th and

PHA11 cont'd

Grand streetcar, and the fully underground Office Depot site. 4 cont'd

And again, we want to thank you for engaging the community and really listening to the community from the very beginning, and especially working really closely with the Little Tokyo community to figure out a tricky situation. 5

That's all.

MS. KERMAN: Thank you, Russ.

Joel Covarrubias, followed by Patti Berman, followed by Dave Frevele.

PHA12

MR. COVARRUBIAS: Hi. My name is Joel Covarrubias. The regional connector is an absolutely critical project. Please build it as quickly and safely as possible. 1

You have done a fine job identifying possible alternatives, including station options as well as an underground prospect. I'll talk about the project as quickly as I can.

Preferred alternative. Please build the fully underground alternative, despite the higher cost. This alternative will result in more passengers and a more reliable line for all riders with fewer impacts in the downtown community. 2

Item two. Please do not remove the station at 3

25 5th and Flower. There are some rumors going around about

PHA12
cont'd

that. Once all lines are running and connected, the Metro Center is going to be a busy transfer station. We're going to need 5th and Flower as the destination station for the people going to the Financial District. 3 cont'd

Three. If you do decide to get rid of the Financial District station, which I hope you don't, please study a new north entrance at the Central Metro station. I believe this can be done by extending the existing mezzanine north between 6th and Flower. 4

Item four. Station names. Please name the stations after the neighborhoods served, rather than intersections. We saw a bunch of 2nd and Broadway, 2nd and Hope. Please think about names like Little Tokyo, historical Bunker Hill and the Financial District. 5

Point five. Plans call for a covered tunnel under Flower Street. Please build this tunnel wide enough to accommodate three tracks. I've seen plans that call for pocket tracks south of the Bunker Hill station. Designing the tunnel, the entire tunnel, for three tracks now will give Metro the space to accommodate future track, such as a second pocket track from Metro for a passing track along the entire length of that tunnel. 6

And finally, all stations. Please build the 7

stations, every station, with at least two entrances and 7 cont'd

PHA12
cont'd

7
cont'd

possibly three. I understand there are cost issues involved, but we all want the best stations possible.

MS. KERMAN: Thank you, Joel.

And if you'd like to turn in your comments, we'd be happy to take them.

Patti Berman, representing the Downtown Los Angeles Neighborhood Council, then followed by Dave Frevele, ERHA, and then I have a speaker card for Dave Satara (phonetic).

PHA13

MS. BERMAN: My name is Patti Berman. I'm the president of the Downtown Los Angeles Neighborhood Council, and I would like to reiterate something that Russ Brown just said, which is this process has really been so wonderful to work with in terms of Metro by making this a really smooth, easy process, and I know we all appreciate that.

Obviously, the Downtown Neighborhood Council has been very vocal on this. We accept only the idea of the fully underground alignment. We feel that adding trains into the mix of traffic in the downtown area would be disastrous, and we also feel that when it comes to the exact design of how this will come up in Little Tokyo, the people that live in this area should be the ones to make the decision, not us.

But please look at the fully underground

alternative, and again, thank you so much for getting this going. It's just been a really, really great process.

MS. KERMAN: Dave, you're up next, followed by Dave Satara, followed by Brady Westwater.

MR. FREVELE: My name is Dave Frevele. I'm with the ERHA, which is the Electric Railway Historical Association. There were a lot of us that are very intent, what we call rail fans. Some of us get to the point where there's a nickname for us where they would call us foaming, referring us to rabid dogs. There's some of us that were very beloved of the rail system that was here that was completely erased in Los Angeles.

Prior to MTA, there was RTD. Prior to RTD, there was the first MTA Board that had oil company executives, car dealers, contractors that would pave streets. I use the word "naturally," but it was completely against the public interest to remove the rail system that was here. I want to say more than any project, but getting the first rail to come back to the line is also important.

This project also is very critically important, even more so than the subway. We're very lucky that Antonio Villaraigosa tonight is in Washington, D.C. He understands fully and with the MTA, completely supports 30/10, which is a very overdue measure to help us in

PHA13 cont'd 1 cont'd

PHA14 1

Los Angeles.

PHA14
cont'd

I should say something about the staff for the regional connector. I did write the Board last week and some meetings don't go well, Expo and other meetings. When you come to regional connector meetings, we're fully listened to. We're fully communicated with, not just by Dolores, but also Ann and Libby are very helpful.

It's a very different atmosphere than many other MTA meetings. Not everybody will turn around and say we appreciate that or remark on it, but it's a very, very good thing. 2

As far as the downtown connector, please, MTA, build that even before you do anything to the subway. Build that instantly, fully underground. I'm grateful that you don't molest 1st and Alameda with a fully underground option. 3

MS. KERMAN: Thank you, Dave. You're right on time.

Brady Westwater, followed by Jay Stringer, followed by Jon Kaji.

PHA15

MR. WESTWATER: My name is Brady Westwater. Like everybody else, I support the fully underground. I think it's the only thing in this chain where everybody has agreed about the same thing. I have three comments to make, though. 1

First is at 2nd and Hope on the top of 2

Bunker Hill, it says no further development is planned.

2
cont'd

PHA15
cont'd

We have an area there with Bunker Hill Towers, separate from the rest of Bunker Hill, with a maze of streets, which need to be reorganized, park spaces are unusable and other activities that need to be rationalized. This is the opportunity to do that.

MOCA also needs a permanent home for its permanent collection that's large. What better place than this? The Getty needs a house for its collection. They're not allowed to add one foot to their existing campus. What better place than this?

I suggest that they rewrite the report to say that the land freed up by the construction here should be considered for specific uses that would also make it a destination, making people more likely to use rapid transit in the city.

2
cont'd

Second point is Little Tokyo where the underground portal is. They should make it a prime consideration to restore the brick buildings that date back to the early days of Little Tokyo on that site. They were originally going to be torn up by the cut that was going to go through Little Tokyo.

3

Last point is when the community was first presented, the cut through Little Tokyo was not even going to be in the study group to study whether that should be

4

PHA15
cont'd

done or not. That was just what everybody was told was

4
cont'd

PHA15
cont'd

going to happen. Someone in the community spoke up. MTA listened and because of that, we've have a fully underground proposal.

4
cont'd

Thank you.

MS. KERMAN: Thank you, Brady.

Next, we have Jay Springer, followed by Jon Kaji, followed by Kim Luu-Ng.

And I would like to also take this opportunity before Mr. Springer starts to let you know that you can still turn in speaker cards. If you need one, raise your hand. We'll be happy to get it to you.

And Mr. Springer, please.

PHA16

MR. SPRINGER: Good evening. My name is Jay Springer. I'm a resident of 1130 South Flower Street, Flower Street Lofts. I'm also the president of the Flower Street Lofts Homeowners Association, a community of over 250 residents. Tonight I'm speaking on behalf of myself personally. I've also been employed in Downtown Los Angeles, I'm afraid to say, for over 30 years now.

First of all, I'd like to offer my hearty congratulations to MTA and the staff. You've really put together a very nice set of alternatives. You really deserve the community's thanks for that effort. Thank you very much.

1

PHA16
cont'd

And I'm really pleased to see your fully 2

PHA16
cont'd

underground alternative now shows the location of the Little Tokyo station. I appreciate that. We can all understand the plan now.

I'm speaking tonight to support the fully underground alternative. This is an appropriate investment, not only for this area, but for the entire downtown community and for the entire metropolitan Los Angeles area. Please build the fully underground alternative.

2
cont'd

Thank you.

MS. KERMAN: Thank you, Mr. Springer.

I would also like to mention that we're live streaming this meeting, and I've been advised that we have several people watching online, so welcome to all of you.

And with that, Jon Kaji, you're up next, followed by Kim-Luu Ng, followed by Jayson Yamaguchi.

PHA17

MR. KAJI: Thank you. My name is Jon Kaji. I'm with the Nikkei Center, LLC Project.

First of all, as many have said before me, I'm very appreciative to the MTA staff for spearheading this effort, and also, I thank you for all of you who represent working with your communities, your constituents. I really think that this is a wonderful -- it's been a wonderful process.

1

It hasn't been easy, and yet I think now that 1 cont'd

PHA17
cont'd

we're here together moving forward to the Metro Board meeting, I think that this is a great time to kind of look around the room, look at all who are represented here because to me, this has really been a remarkable and inclusive process.

I did want to speak about the next steps. I know that we're moving towards the Metro Board meeting, but we're entering into a very highly competitive phase in Washington. As you know, other communities, other cities, other states are competing for a limited number of transportation dollars, and I think Downtown L.A., and I think Los Angeles and the region has often been short shrifted, that we haven't received our fair share of those tax dollars, which we have been paying to Washington.

1
cont'd

I think the regional connector is a wonderful way to show that we are getting a return on those tax dollars, and in a way that will enhance the economic viability, not only of downtown, but of Los Angeles and the region.

So my hats are off to the staff and all of you for your commitment to make this a wonderful process and also the end result. We're looking forward to seeing it delivered in a timely manner.

Thank you.

MS. KERMAN: Thank you, Jon.

Kim. Kim, please, if you could pronounce your

name better than I can. Kim is representing The Spice Table, followed by Jayson Yamaguchi, followed by Alan Nishio.

PHA18

MS. LUU-NG: Good evening. My name is Kim Luu-Ng, and my husband and I, Chef Brian Ng, are owners of The Spice Table, which you can see if you look out this window. We're located at 115 South Central, the old Cuban restaurant across the street over here, and we hope to open in November.

That said, I understand that there are a lot of people here, as well as Metro, who support the fully underground option, and it's extremely critical for our long-term existence in Little Tokyo that if you are to fully pursue the fully underground option, that you go with the option that does not displace our restaurant.

1

There are two scenarios. One is where our building and other businesses on this block across the street here will be wiped out to make room for a staging area for MTA. The second is that it is not touched. It is not displaced at all. In order to preserve our business, which is about to open its doors in less than a month, in about a month, go with the option that preserves our restaurant.

Number two. I greatly encourage the MTA to

2

PHA18
cont'd

seriously consider viable and fair business compensation

2
cont'd

PHA18
cont'd

mitigation measures for Little Tokyo businesses. The construction will be loud, extremely disruptive to the area. Access points to Little Tokyo are going to be cut off, people are not going to be able to eat at our restaurant and shop at stores.

So therefore, we need some kind of compensation measure that is fair and viable. If you're going to spend billions of dollars to invest in construction, then you should also invest in small business, and we should not be forced to die at the expense of construction.

Thank you.

2
cont'd

MS. KERMAN: Thank you, Kim, and if you have additional comments, please put them in writing to us.

Jayson Yamaguchi, representing GetFit Little Tokyo, followed by Alan Nishio, followed by Hiroshi Yamauchi.

PHA19

MR. YAMAGUCHI: Good evening. My name is Jayson Yamaguchi. I am a resident of Little Tokyo, and I'm supporting the fully underground alternative, but recently I heard that when the Red Line that goes underneath in the tunnel, during the construction, the smaller portion of the Kaiser Hospital sunk. That's what I heard.

1

So if that is the case, it's a big concern for me

PHA19
cont'd

because that subway is going under 2nd Street, so if we

1
cont'd

have any park for the residents or merchants or business people from outside Flower Street, if you can give us that, that would help Little Tokyo.

Thank you.

MS. KERMAN: Thank you, Jayson.

Alan Nishio, followed by Hiroshi Yamauchi, followed by Brian Kito.

MR. NISHIO: Hi. I'm Alan Nishio, and I'm the company chair for California Japanese American Community Leadership Council. We're a statewide organization of Japanese American community organization centers that are dedicated to the preservation of the three remaining Japantowns in San Francisco, San Jose and Los Angeles.

Prior to World War II, there were over 70 Japantowns in California alone and well over 100 in the nation. Now there are only three remaining in the nation and all three are in California, so the location of the regional connector to Little Tokyo is very important to our community, so we're very concerned.

While we support the Metro Regional Connector fully underground, we need to understand that we're making, as a community, great sacrifices for this station to occur, and we want to make sure that the construction of this does not jeopardize the future and threaten

PHA19 cont'd

1 cont'd

PHA20

1

Little Tokyo as a community.

PHA20
cont'd

We believe Metro staff has heard that we support the fully underground, but we want to emphasize other things because what is really key to Little Tokyo is small business, the small family-owned businesses, the non-big-box franchise types of things are what makes Little Tokyo such a unique community.

So we want to make sure that during the construction, the concerns of small businesses are heard and that includes where the tunnel boring begins because we do not want four years of disruption for the small business in Little Tokyo, and it also means some sort of compensation for those businesses to ensure that the character of Little Tokyo survives well into the 21st Century.

Thank you.

1
cont'd

MS. KERMAN: Thank you, Alan.

Hiroshi Yamauchi, followed by Brian Kito, followed by John Kerr.

And this is also a good opportunity to let you know that if you would still like to speak tonight, raise your hand. We'll get you a speaker card, and we'll be delighted to hear your thoughts.

PHA21

MR. YAMAUCHI: My name is Hiroshi Yamauchi, owner of a Japanese restaurant in Little Tokyo on 2nd Street --

1

PHA21
cont'd

25 I think I need an interpreter. Is that okay?

1
cont'd

PHA21
cont'd

MS. KERMAN: Hiroshi, we would like to give you an interpreter, if you would like one.

MR. YAMAUCHI: Yes, yes. I'm Hiroshi Yamauchi. I have a small restaurant on 2nd Street between Central and San Pedro, right in the middle of Little Tokyo on 2nd Street. What everybody is saying, I support the fully underground option, but I have a little question about that.

It seems to me that you guys are going to use a cut-and-cover method, that's a construction method, but if you do this, our business cannot last for four years. Please, everybody, reconsider your support because for people who don't live here, this sounds like a great idea, but for us who live here, it is a very serious matter, so please reconsider because it is going to threaten our lives. 400 businesses here in Little Tokyo and 2000 residents and people who work for the businesses included. The population will become ten times as many.

1
cont'd

But the plan sounds great, but in reality, the whole Little Tokyo will become the construction site for four long years. It is very serious for us.

Thank you.

MS. KERMAN: Thank you, Hiroshi.

Brian Kito, followed by John Kerr.

25 And then if there are any others that would like

to speak tonight, please raise your hand. We'll get you a comment card.

PHA22

MR. KITO: My name is Brian Kito. I own Fugetsu-Do Confectionery, which is a three-generation old business. It's the oldest business here in Little Tokyo, 107 years.

When I first heard about the alternatives for us to have a Metro Rail line coming down to Little Tokyo, I was very happy. I think the first vote was between Temple Street connector or 2nd Street or even 3rd or 4th Street connector. Obviously, I voted for Temple Street, so I was very disappointed that that was taken off the possibilities.

1

We have a long history here. I lived through the redevelopment through the '80s here. My dad had two stores here at that time, so we've experienced eminent domain and losing one of our stores, the first American-style bakery here in Little Tokyo, so I'm very aware of what the small businesses have to go through during construction and redevelopment and these types of issues.

I do know what it feels like to have to deal with government agencies like CRA, try to get relocation benefits and things like that. I beg you guys to make sure that whatever we can do about saving this block, the one that's down by 2nd, Central and Alameda. I don't

want to see that block be lost. If there's any other

PHA22 cont'd

alternative that would save that block, I would vote for it for sure. 1 cont'd

Thank you.

MS. KERMAN: Thank you very much.

John Kerr, followed by Les Howard.

MR. KERR: Good evening. I live in the Wilshire Center neighborhood.

MS. KERMAN: John, if you could introduce yourself again.

Thank you.

PHA23

MR. KERR: Hi. My name is John Kerr, and I live in the Wilshire Center neighborhood, but I frequent downtown a lot, one of my favorite neighborhoods, and Little Tokyo is a large part of it, so I also urge Metro to do everything they can to make sure that the businesses and the wonderful pedestrian atmosphere that Little Tokyo provides, keep intact during all of the construction. 1

Secondly, I want to voice my support for the fully underground option. It will truly keep L.A.'s rapid transit rapid. And along those lines, I just want to voice a little concern for the eventual through running of the trains to Pasadena into Long Beach, East L.A. to Santa Monica. 2

A 50-mile light-rail transit line is pretty much

PHA23
cont'd

unheard of in this area of the United States, and the 2 cont'd

travel times between those two destinations, especially one that extends beyond Azusa further on into the foothills, it seems like the line might be almost too long.

So I hope there are thoughts for other through running options such as East L.A. to Long Beach and Pasadena to Santa Monica before accomplishing this for those of us who look forward to this project being completed.

Thank you.

MS. KERMAN: Thank you, John.

Les Howard.

I'd also like to use this opportunity while Les is coming to the mic to invite anyone else who would like to speak tonight to fill out a speaker card.

MR. HOWARD: I'm a member of the Gold Line --

MS. KERMAN: Les, if you could introduce yourself, please.

MR. HOWARD: Les Howard from Whittier and member of the advocacy group for the Washington Boulevard alignment for the extension of the Gold Line. I am excited as a potential stakeholder, if I live long enough, of what this project here does as a multiplier for the investment being made across the metropolitan area as we go forward with

PHA23 cont'd
2 cont'd
PHA24
1

PHA24
cont'd

MTA extension.

1
cont'd

PHA24
cont'd

I deeply appreciate the sacrifices the people in this neighborhood will be called upon to make and support any effective form of mitigation that can be provided, but your neighbors even further afield, as we look forward to this, join you in looking forward to the benefit.

Tonight, I had to drive to Atlantic to take the Gold Line to Little Tokyo. Soon, I hope many of us will be able to come to Little Tokyo directly.

1
cont'd

MS. KERMAN: Thank you, Les.

Do I have any additional speaker cards? We will leave this mic open until 8:00, and if you do want to speak, please provide me a speaker card, raise your hand. We'd be delighted to get you one.

In the meantime, let me also remind you that if you could please make sure that you have signed in tonight, we want to make sure that we have current contact information for all of you so that we can keep you up-to-date on the process and progress of the study.

You can also complete a comment form at the registration desk or again, you may E-mail us or mail us by postal mail, all of the various ways that you can comment on this project or the EIS/EIR through October 18th are up on the screen.

We encourage you to stay informed on this

process, and we do have a Web site at

metro.netregionalconnector -- metro.net/regionalconnector.

Do I hear any other comments? Well, for those that would like to -- Diego, please.

MR. CARDOSO: I just want to thank the community that came tonight to this meeting. We did a lot of work with the community, and I also want to thank Dolores and the new baby that is coming for Dolores.

We are a city that is transforming and will continue to transform, and as we build transit, we're building a more livable community, and the people that will enjoy it more so than us are the young people that are ahead of us in the future.

So I really thank the community, thank all of the technical people that helped us, Ray and everybody. If I start calling names, I will forget. And our engineer in the back, thank you so much for coming tonight and any speakers please come up. And Ginny, thank you.

MS. KERMAN: No more speaker cards. Okay.

Again, we're taking comments until 8:00, but I will remind you that there's a very, very important board meeting to put on your calendar. That is when the Metro Board of Directors will choose a locally preferred alternative. That is October 28th. And prior to that board meeting, we plan to go to Metro Committee, the

Measure R Committee, on October 21st. That's a 9:00

meeting.

If you've provided your E-mail address on the registration form or if we have you in our database, we will make sure that we notify you of that meeting.

And on behalf of all the Metro staff and the project team, that includes our consults, The Robert Group, CDM, the entire team Ted Tanaka (phonetic), PD, we do thank you for joining us this evening, for being part of our process, for participating, and please get us your comments, continue to let us know how you feel about this project.

And again, we thank you so much, so good night.

(Hearing adjourned at 7:48 p.m.)

25

PHA1

Responses to Comments from Fishel, Alan

Response to Comment PHA1-1

Comment acknowledged.

Response to Comment PHA1-2

Metro has refined the Locally Preferred Alternative since publication of the Draft EIS/EIR to soften the alignment curves in the Little Tokyo area, thereby allowing higher train speeds. Metro appreciates the submission of the map, and addresses it in responses to Comment Letter PC111.

PHA2

Responses to Comments from Japanese Chamber of Commerce, Okamoto, Mike

Response to Comment PHA2-1

Thank you for your comment. Support for the Fully Underground LRT Alternative is noted. The Metro Board of Directors voted on October 28, 2010 to designate the Fully Underground LRT Alternative as the Locally Preferred Alternative.

Response to Comment PHA2-2

Intersection impacts were analyzed in Chapter 3, Transportation Impacts and Mitigation, of the Draft EIS/EIR and this Final EIS/EIR. The Draft EIS/EIR and this Final EIS/EIR determined that during the AM peak hour 18 intersections and during the PM peak hour 26 intersections would experience significant adverse impacts under the At-Grade LRT Alternative, and three intersections during the AM peak hour and only seven intersections during the PM peak hour would experience significant adverse impacts under the Underground Emphasis LRT Alternative.

Response to Comment PHA2-3

Comment acknowledged. The Metro Board of Directors voted on October 28, 2010 to designate the Fully Underground LRT Alternative as the Locally Preferred Alternative, which would result in a regional decrease in greenhouse gas emissions compared to the No Build Alternative.

PHA3

Responses to Comments from Little Tokyo Business Association and Little Tokyo Business Improvement District, Liu, Wilson

Response to Comment PHA3-1

Comment acknowledged. Letters, submitted by the Little Tokyo Business Association and Little Tokyo Business Improvement District, referenced in this comment are contained in this volume of the Final EIS/EIR as Comment Letters BU18 through BU20. Please refer to Responses to Comments BU18-1 through BU20-8, above, for detailed responses to concerns raised in these comment letters.

PHA4

Responses to Comments from Kay, Greg

Response to Comment PHA4-1

Thank you for your comment. Support for the Fully Underground LRT Alternative is noted. The Metro Board of Directors voted on October 28, 2010 to designate the Fully Underground LRT Alternative as the Locally Preferred Alternative.

Response to Comment PHA4-2

Preference for a station between Los Angeles and San Pedro Streets is noted.

PHA5

Responses to Comments from Adelman, Charles

Response to Comment PHA5-1

Thank you for your comment. Support for the Fully Underground LRT Alternative is noted. The Metro Board of Directors voted on October 28, 2010 to designate the Fully Underground LRT Alternative as the Locally Preferred Alternative.

Response to Comment PHA5-2

Fully Underground LRT Alternative – Little Tokyo Variation 2 was eliminated from further study due to potential impacts to the Los Angeles Hompa Hongwanji Temple. A rail simulation was performed to ensure that the Fully Underground LRT Alternative – Little Tokyo Variation 1 would be able to accommodate the Regional Connector's projected 2.5 minute headway. Metro would use measures such as trackside signals, cab signaling, and automatic train control systems to ensure safety. Safety systems would be included to prevent train operators from passing red signals.

PHA6

Responses to Comments from Havens, Alan

Response to Comment PHA6-1

Thank you for your comment. Support for the Fully Underground LRT Alternative is noted. The Metro Board of Directors voted on October 28, 2010 to designate the Fully Underground LRT Alternative as the Locally Preferred Alternative.

Response to Comment PHA6-2

Comment noted.

Response to Comment PHA6-3

Union Station and Metro Blue Line service to Watts would be maintained. The Fully Underground LRT Alternative was designated as the Locally Preferred Alternative in part to avoid the impacts of surface tracks in the dense downtown area. The Locally Preferred Alternative includes a new underground pocket track north of 7th Street/Metro Center Station. The surface tracks connecting the Pasadena and East Los Angeles branches of the Metro Gold Line would no longer be in service once the Regional Connector opens, and may ultimately be removed. The majority of transit passengers riding the Metro Gold Line from East Los Angeles are destined for downtown Los Angeles and points westward. These passengers would benefit from seamless travel to westside destinations. Transit riders traveling from East Los Angeles to Pasadena (and in the future to Montclair) would be required to transfer at the new underground station in Little Tokyo. The Eastside Extension Phase 2 project would extend the Metro Gold Line farther east, and would have direct trains into the Regional Connector. The Regional Connector ridership forecasting assumes that the Eastside Extension Phase 2 will be in operation by the year 2035, and results show that the Regional Connector would have adequate capacity to accommodate the projected volumes of transferring passengers.

PHA7

Responses to Comments from Zablen, Nathan

Response to Comment PHA7-1

Thank you for your comment. Support for the Fully Underground LRT Alternative is noted. The Metro Board of Directors voted on October 28, 2010 to designate the Fully Underground LRT Alternative as the Locally Preferred Alternative.

Response to Comment PHA7-2

Comment acknowledged. Metro has included the Little Tokyo community in meetings involving station planning and Metro will continue to coordinate with the Little Tokyo community during the course of the project.

Response to Comment PHA7-3

Comment acknowledged. Thank you for your comment.

PHA8

Responses to Comments from Briones, William

Response to Comment PHA8-1

Comment acknowledged. Construction of the Locally Preferred Alternative would not require temporary easement, partial, or full taking of the Los Angeles Hompa Hongwanji Temple property.

Response to Comment PHA8-2

Thank you for your comment. Support for an underground LRT is noted. The Metro Board of Directors voted on October 28, 2010 to designate the Fully Underground LRT Alternative as the Locally Preferred Alternative.

PHA9

Responses to Comments from Little Tokyo Community Council, Watanabe, Bill

Response to Comment PHA9-1

Thank you for your comment. Support for the Fully Underground LRT Alternative is noted. The Metro Board of Directors voted on October 28, 2010 to designate the Fully Underground LRT Alternative as the Locally Preferred Alternative.

Response to Comment PHA9-2

Comment acknowledged. As indicated in Section 4.18, Construction Impacts, of the Draft EIS/EIR and this Final EIS/EIR, a range of durations, 2-4 months for the TBM insertion site and 24-48 months for the 2nd Street TBM tunnel, was assumed for tunneling activities at both insertion site options. These ranges are conservative estimates. Disproportionate impacts associated with each alternative were discussed in Section 4.17, Environmental Justice, of the Draft EIS/EIR and this Final EIS/EIR.

The small size of the 2nd/Hope Street station site would require a substantial portion of construction staging activities to occur in the surrounding streets, necessitating longer downtown street closures and increased cut and cover activities. This would have the effect of reducing mobility downtown and could deter visitors from frequenting many downtown communities, including Little Tokyo. In addition, the 1st/Central Avenue station site in Little Tokyo would need to be used as the TBM receiving site if the tunnel boring machines are inserted at the 2nd/Hope Street station site.

Based on comments received on the Draft EIS/EIR and input received from community meetings held during preparation of this Final EIS/EIR, the TBM insertion site options at 2nd/Central Avenue station and the 2nd/Hope Street station are no longer being considered. Instead the vacant property at the northeast corner of 1st and Alameda Streets, formerly known as the Mangrove Site, would be used as the insertion site. The TBM would be inserted approximately 700 feet from the originally proposed 2nd/Central Avenue insertion area, which would reduce the intensity of construction on the block bounded by 1st Street, Central Avenue, 2nd Street, and Alameda Street and result in fewer acquisitions. Tunnel boring activities from this site would proceed farther down Flower Street to 4th Street, instead of ending at the proposed 2nd/Hope Street station. Spoils would be removed within the Mangrove property, and trucks would be routed to the east and/or north to reach the freeway, and would not pass through Little Tokyo. Section 4.18, Construction Impacts, of this Final EIS/EIR contains further detail regarding estimated construction durations, construction scenarios, and tunnel boring operations at the Mangrove property. Chapter 3, Transportation Impacts and Mitigation, and Chapter 4, Environmental Analysis, Consequences, and Mitigation, of the Draft EIS/EIR have been revised based on the new TBM insertion site in this Final EIS/EIR. A portion of the Mangrove property was identified for construction staging in the Draft EIS/EIR. Inserting the TBM at the Mangrove property would not result in new significant impacts or substantially increase the severity of impacts previously identified in the Draft EIS/EIR.

Worksite Traffic Control Plans will be developed in coordination with the Los Angeles Department of Transportation and presented to the community prior to construction activities.

Metro will provide the community with updates regarding the construction schedule prior to and during construction.

The tunnel boring machine insertion site needs to be located at the end of the tunneled segment of the alignment. The former state office building site is located near the middle of the tunneled segment, and would therefore not be practicable, and would not greatly reduce construction impacts in Little Tokyo or at 2nd and Hope.

Response to Comment PHA9-3

Metro will continue to coordinate with the Little Tokyo community during the course of the project. During preparation of this Final EIS/EIR, Metro held meetings with community groups, which included meetings with the Little Tokyo Working Group, and identified municipal leaders to guide them in the decision-making process as it relates to the proposed station locations, alignment options, and anticipated mitigation measures. Community input during these meetings has been taken into account in the refinement of the Locally Preferred Alternative and the Mitigation Monitoring and Reporting Program for the Locally Preferred Alternative (Chapter 8), which are presented in this Final EIS/EIR. A community outreach plan will also be developed to notify local communities of construction schedules, street lane and sidewalk closures, and detours during project construction.

In accordance with the State CEQA Guidelines, the Metro Board of Directors will decide whether or how to approve or carry out the project after considering this Final EIS/EIR and in conjunction with making findings under Section 15091 of the State CEQA Guidelines.

Appropriate candidate mitigation measures identified in the Draft EIS/EIR have been refined and confirmed in this Final EIS/EIR and the Mitigation Monitoring and Reporting Program for the Locally Preferred Alternative (Chapter 8) of this Final EIS/EIR to minimize impacts to local businesses.

PHA10

Responses to Comments from Kawaratani, Yukio

Response to Comment PHA10-1

Thank you for your comment. Support for the Fully Underground LRT Alternative is noted. The Metro Board of Directors voted on October 28, 2010 to designate the Fully Underground LRT Alternative as the Locally Preferred Alternative.

Response to Comment PHA10-2

Concurrence with the Draft EIS/EIR conclusion is noted.

Response to Comment PHA10-3

Mitigation measures were identified in Section 4.14, Economic and Fiscal Impacts, of the Draft EIS/EIR to reduce economic impacts associated with construction of the Locally Preferred Alternative to the Little Tokyo community. Since publication of the Draft EIS/EIR, refinements to the Locally Preferred Alternative have reduced the significance of potentially adverse economic and fiscal impacts during construction in Little Tokyo, refer to Section 4.14, Economic and Fiscal Impacts, of this Final EIS/EIR. The refinements reduce the amount of cut and cover, the need for roadway and sidewalk closures, property acquisitions, and overall disruption to businesses that would occur during construction. The refinements to the Locally Preferred Alternative have also reduced the number of privately-owned parcels that would be completely or partially acquired. Appropriate candidate mitigation measures identified in the Draft EIS/EIR have been refined and confirmed in this Final EIS/EIR and the Mitigation Monitoring and Reporting Program for the Locally Preferred Alternative (Chapter 8) of this Final EIS/EIR. The Locally Preferred Alternative would not have significant economic effects after implementation of mitigation. Refer to Section 4.14, Economic and Fiscal Impacts, of this Final EIS/EIR.

Response to Comment PHA10-4

The Draft EIS/EIR and this Final EIS/EIR adequately analyzed impacts to Little Tokyo as a result of the Underground Emphasis LRT Alternative in Chapter 3, Transportation Impacts and Mitigation, and Chapter 4, Environmental Analysis, Consequences, and Mitigation. Please refer to Responses to Comments PHA10-5 through PHA10-9, below, for detailed responses regarding concerns raised by the commenter.

Response to Comment PHA10-5

The Locally Preferred Alternative would not include an Alameda Street underpass. The traffic lanes and pedestrian crossings at 1st and Alameda Streets would remain at-grade, as they are today.

Response to Comment PHA10-6

Metro designs its grade crossings to minimize potential conflicts between pedestrians, vehicles, and trains. No grade crossings would be constructed as part of the Locally Preferred Alternative. The Little Tokyo pedestrian bridges are included only in the At-Grade Emphasis LRT Alternative and Underground Emphasis LRT Alternative. The Metro Board of Directors voted on October 28, 2010 to designate the Fully Underground LRT Alternative as the Locally Preferred Alternative.

Response to Comment PHA10-7

This impact was discussed in Section 4.17.3.4.2 of the Draft EIS/EIR.

Response to Comment PHA10-8

Metro designs its grade crossings to minimize potential conflicts between pedestrians, vehicles, and trains. No grade crossings would be constructed as part of the Locally Preferred Alternative. The Little Tokyo pedestrian bridges are included only in the At-Grade Emphasis LRT Alternative and Underground Emphasis LRT Alternative. The Metro Board of Directors voted on October 28, 2010 to designate the Fully Underground LRT Alternative as the Locally Preferred Alternative.

Response to Comment PHA10-9

It is noted that the commenter supports the Fully Underground LRT Alternative and opposes the Underground Emphasis LRT Alternative. The Metro Board of Directors voted on October 28, 2010 to designate the Fully Underground LRT Alternative as the Locally Preferred Alternative.

PHA11

Responses to Comments from Historic Downtown Business Improvement District of the L.A. City Chapter, Brown, Russ

Response to Comment PHA11-1

Thank you for your comment.

Response to Comment PHA11-2

Thank you for your comment. Support for the Fully Underground LRT Alternative is noted. The Metro Board of Directors voted on October 28, 2010 to designate the Fully Underground LRT Alternative as the Locally Preferred Alternative.

Response to Comment PHA11-3

Support for the 2nd/Broadway station is noted. The Locally Preferred Alternative includes a station at 2nd and Broadway.

Response to Comment PHA11-4

The Metro Board of Directors voted on October 28, 2010 to designate the Fully Underground LRT Alternative without the Flower/5th/4th Street station as the Locally Preferred Alternative. The deletion of the station was done in an effort to reduce the cost of the project while still meeting the project's purpose and need. An enhanced pedestrian walkway connecting the 4th/Flower Streets area to the existing 7th Street/Metro Center Station would be constructed on Flower Street to improve access to the Financial District. The design of the Locally Preferred Alternative would not preclude a station at 5th and Flower Streets from being built as a possible future, separate project.

Response to Comment PHA11-5

Thank you for your comment.

PHA12

Responses to Comments from Covarrubias, Joel

Response to Comment PHA12-1

Thank you for your comment. Support for the Regional Connector project is noted.

Response to Comment PHA12-2

Thank you for your comment. Support for the Fully Underground LRT Alternative is noted. The Metro Board of Directors voted on October 28, 2010 to designate the Fully Underground LRT Alternative as the Locally Preferred Alternative.

Response to Comment PHA12-3

Support for the Flower/5th/4th Street station is noted. The Metro Board of Directors voted on October 28, 2010 to designate the Fully Underground LRT Alternative without the Flower/5th/4th Street station as the Locally Preferred Alternative. The deletion of the station was done in an effort to reduce the cost of the project while still meeting the project's purpose and need. An enhanced pedestrian walkway connecting the 4th/Flower Streets area to the existing 7th Street/Metro Center Station would be constructed on Flower Street to improve access to the Financial District. Metro understands the importance of serving the Financial District and believes that the Locally Preferred Alternative still meets the purpose and need of the project despite the station deletion. Deletion of the Flower/5th/4th Street station would result in minimal ridership losses because most riders would use the 2nd/Hope Street station or 7th Street/Metro Center Station, which would service the Financial District. After the October 28, 2010 meeting, the Metro Board of Directors directed staff to meet with the Financial District stakeholders to discuss options for privately funding the Flower/5th/4th Street station, but no funding sources were identified. However, the design of the Locally Preferred Alternative would not preclude a station at 5th and Flower Streets from being built as a possible future, separate project.

Response to Comment PHA12-4

The Metro Board of Directors voted on October 28, 2010 to designate the Fully Underground LRT Alternative without the Flower/5th/4th Street station as the Locally Preferred Alternative. An enhanced pedestrian walkway connecting the 4th/Flower Streets area to the existing 7th Street/Metro Center Station would be constructed on Flower Street to improve access to the Financial District. The design of the Locally Preferred Alternative would not preclude a station at 5th and Flower Streets from being built as a possible future, separate project.

Response to Comment PHA12-5

Metro will undergo a formal station naming process that includes community participation. The stations are referred to in the EIS/EIR by intersection so as to be as descriptive as possible about their locations, but these will not necessarily become the actual station names.

Response to Comment PHA12-6

The Locally Preferred Alternative includes double track beneath Flower Street, and a pocket track for the storage or reversal of trains. Metro performed a rail simulation as part of the Draft EIS/EIR process, which verified that the Fully Underground LRT Alternative would be able to accommodate the anticipated volume of trains.

Response to Comment PHA12-7

The number of entrances at each station is based on ridership levels as well as community needs. Metro will integrate the station entrances into the surrounding neighborhoods through design.

PHA13

Responses to Comments from Downtown Los Angeles Neighborhood Council, Berman, Patti

Response to Comment PHA13-1

Thank you for your comment. Metro has and will continue to coordinate with the Little Tokyo community regarding the Regional Connector Transit Corridor project. The Metro Board of Directors voted on October 28, 2010 to designate the Fully Underground LRT Alternative as the Locally Preferred Alternative.

Response to Comment PHA15-1

Thank you for your comment. Support for the Fully Underground LRT Alternative is noted. The Metro Board of Directors voted on October 28, 2010 to designate the Fully Underground LRT Alternative as the Locally Preferred Alternative. Please refer to Responses to Comments PHA15-2 through PHA15-4, below, for detailed responses regarding concerns raised by the commenter.

Response to Comment PHA15-2

Metro will work with the community to determine re-use of construction staging areas after construction is completed. In doing so, Metro hopes to create destinations compatible with transit use. Suggestions for improvement of the Bunker Hill area are noted. Roadway reconfiguration in the vicinity of the 2nd/Hope Street station would occur as part of the Regional Connector project. Based on the refinements to the Locally Preferred Alternative, only the northern portion of the block bounded by 1st Street, Central Avenue, 2nd Street, and Alameda Street would need to be acquired as part of the Locally Preferred Alternative for the 1st/Central Avenue station site. The Señor Fish, Weiland Brewery, associated parking, and the former Café Cuba (The Spice Table) would still need to be displaced. However, the remaining businesses on that block would remain, including the Office Depot and associated parking. It is Metro's goals to minimize such acquisitions. Metro added the Fully Underground LRT Alternative during the Draft EIS/EIR process in response to community input.

Response to Comment PHA15-3

Unlike the Underground Emphasis LRT Alternative, the Locally Preferred Alternative does not include a portal on the block bounded by 1st Street, Central Avenue, 2nd Street, and Alameda Street. However, some brick structures on that block (Weiland Brewery, Señor Fish, associated parking, and Café Cuba [The Spice Table]) would still need to be displaced to make room for a new underground station. The remaining businesses on that block would remain, including the Office Depot and associated parking. A portion of the land acquired for the station would be available for development after construction is completed.

Response to Comment PHA15-4

Comment acknowledged.

PHA17

Responses to Comments from Nikkei Center, LLC Project, Kaji, Jon

Response to Comment PHA17-1

Thank you for your comment.

PHA18

Responses to Comments from The Spice Table, Luu-Ng, Kim

Response to Comment PHA18-1

No feasible options are available for the Fully Underground LRT Alternative that would avoid displacement of The Spice Table restaurant at 115 South Central Avenue. Metro has refined the Locally Preferred Alternative alignment to minimize acquisition on the block bounded by 1st Street, Central Avenue, 2nd Street, and Alameda Street, but The Spice Table would still be among the businesses that must be displaced. As indicated in Section 4.2.1 of the Draft EIS/EIR and this Final EIS/EIR, compensation and relocation assistance will be provided to displaced businesses consistent with the Uniform Relocation Assistance and Real Property Acquisition Policies Act of 1970.

Response to Comment PHA18-2

It is Metro's goal to minimize construction impacts to businesses. As indicated in Section 4.7, Noise and Vibration, of the Supplemental EA/Recirculated Draft EIR Sections and this Final EIS/EIR, consistency with the goals of the applicable local ordinances and implementation of Best Management Practices, would ensure that noise levels associated with construction of the Locally Preferred Alternative would not result in a significant adverse impact to sensitive land uses. Although, noise generated during construction of the Locally Preferred Alternative would not result in a significant impact, Metro will implement the construction noise mitigation measures listed in the Mitigation Monitoring and Report Program for the Locally Preferred Alternative (Chapter 8) of this Final EIS/EIR in order to further minimize disruption. Metro will also provide assistance to Little Tokyo businesses during construction, which could take the form of in-kind advertising, Metro-sponsored coupons, city-wide advertising that Little Tokyo is open for business during construction, and similar supportive measures. Metro believes that these mitigation measures will help attract potential customers to the neighborhood during construction.

PHA19

Responses to Comments from GetFit Little Tokyo, Yamaguchi, Jayson

Response to Comment PHA19-1

Support for the Fully Underground LRT Alternative is noted. The Metro Board of Directors voted on October 28, 2010 to designate the Fully Underground LRT Alternative as the Locally Preferred Alternative. Tunnel boring machine technology has advanced during the time since Metro Red Line construction occurred. Metro recently completed tunneling for the Eastside Extension Phase 1 with no measurable subsidence, and would use similar techniques when building the Regional Connector. Metro recognizes the value of park space for communities, but no parks would be created as part of this transportation project.

PHA20

Responses to Comments from California Japanese American Community Leadership Council, Nishio, Alan

Response to Comment PHA20-1

Thank you for your comment. Support for the Fully Underground LRT Alternative is noted. The Metro Board of Directors voted on October 28, 2010 to designate the Fully Underground LRT Alternative as the Locally Preferred Alternative. Metro coordinated with the Little Tokyo community to develop an effective mitigation program, the Mitigation Monitoring and Reporting Program for the Locally Preferred Alternative (Chapter 8) of this Final EIS/EIR, acceptable to the community, Metro, and FTA. Metro has and will continue to coordinate with the Little Tokyo community during project construction.

Based on comments received on the Draft EIS/EIR and input received from community meetings held during preparation of this Final EIS/EIR, the TBM insertion site option at 2nd/Central Avenue station is no longer being considered. Instead, the vacant property at the northeast corner of 1st and Alameda Streets, formerly known as the Mangrove Site, would be used as the insertion site. At this location, the TBM would be inserted approximately 700 feet from the originally proposed 2nd/Central Avenue insertion area, which would reduce the intensity of construction on the block bounded by 1st Street, Central Avenue, 2nd Street, and Alameda Street, and result in fewer acquisitions. Please refer to Section 4.18, Construction Impacts, of this Final EIS/EIR for further detail regarding tunnel boring operations at the Mangrove property.

Metro will implement the mitigation measures in the Mitigation Monitoring and Reporting Program for the Locally Preferred Alternative with the goal of supporting businesses throughout the construction phase. This will include targeted marketing efforts and other in-kind assistance. Metro will provide two acres of land on the Mangrove property, located at the northeast corner of 1st and Alameda Streets, for the purposes of providing supplemental parking services, such as valet parking services during construction in order to preserve the accessibility of the neighborhood during construction. Metro will minimize street closures, and will maintain access to businesses throughout the construction process.

PHA21

Responses to Comments from Koraku Group, Inc., Yamauchi, Hiroshi

Response to Comment PHA21-1

Construction durations for the Fully Underground LRT Alternative were shown in Table 4.18-2 of the Draft EIS/EIR and for the Locally Preferred Alternative in Table 4.18-1 of this Final EIS/EIR. The entire construction process would take four to five years, but the duration of construction in any one location in Little Tokyo would be less than four years. Metro will implement the mitigation measures in the Mitigation Monitoring and Reporting Program for the Locally Preferred Alternative (Chapter 8) of this Final EIS/EIR in order to minimize the construction impacts of the project. As described in Chapter 2, Alternatives Considered, of this Final EIS/EIR, the Locally Preferred Alternative has been refined since publication of the Draft EIS/EIR. The refined alignment would not involve cut and cover construction on 2nd Street in Little Tokyo, thus eliminating the need for lengthy closures of the street and sidewalk. Temporary intermittent closures may still be needed, but these would be less frequent than with the non-refined alternative described in the Draft EIS/EIR. Cut and cover would be needed at the intersection of 1st and Alameda Streets in order to construct the underground junction.

PHA22

Responses to Comments from Fugetsu-Do Confectionery, Kito, Brian

Response to Comment PHA22-1

Metro has made refinements to the Locally Preferred Alternative in response to community input. The refinements would greatly reduce impacts to businesses. The refined alternative would not involve cut and cover construction on 2nd Street, and would minimize acquisitions on the block bounded by 1st Street, Central Avenue, 2nd Street, and Alameda Street. The majority of parking spaces and businesses on this block would not need to be acquired.

PHA23

Responses to Comments from Kerr, John

Response to Comment PHA23-1

Metro recognizes the importance of Little Tokyo and will continue to work with the community to minimize adverse impacts. Mitigation measures identified in the Mitigation Monitoring and Reporting Program for the Locally Preferred Alternative (Chapter 8) of this Final EIS/EIR are aimed at supporting businesses throughout the construction phase, and minimizing impacts to the pedestrian environment.

Response to Comment PHA23-2

Support for the Fully Underground LRT Alternative is noted. The Metro Board of Directors voted on October 28, 2010 to designate the Fully Underground LRT Alternative as the Locally Preferred Alternative. The Locally Preferred Alternative includes Long Beach-Pasadena (eventually Montclair) and East Los Angeles-Culver City (eventually Santa Monica) routes. However, the track configuration would allow Culver City-Pasadena and Long Beach-East Los Angeles train movements to occur when necessary. Metro operations staff has determined that operation of the North-South Line from Montclair to Long Beach is feasible.

Los Angeles, California, Monday, October 4, 2010

11:40 a.m.

MS. KERMAN: So I'd like to welcome you to the public hearing for the Regional Connector the Draft EIS/EIR, and my name is Ann Kerman. I'm the constituent program manager with Metro on this project. And I will be facilitating this afternoons meeting, as well as acting as the hearing officer for the testimony that we hope each and every one of you will provide, during the next couple of hours.

The next thing I need to find out is, is there anyone here in need of translation. And if I could have my interpreters come up. I would like to have them mention this in the language. Carrisa, could you ask our interpreters to come up?

I'm impressed to see all of you here on this drizzly day here in L.A. How do we like this new building? It's a little warm, but I do hear the air condition is on. So bare with us. Juan Carlos, can you please make an announcement that we do have translation available.

Well, in addition to being in this beautiful facility, we have the honor of having Greg Fischer here with us, with Councilwoman Jan Perry the Council District 9. And Greg, if you wouldn't mind, we'd like to have you welcome

everybody to this new facility.

MR. FISCHER: Good morning. I welcome you here to this facility on behalf of Councilwoman Jan Perry who represents this District. Councilwoman will not be able to be here this morning. I apologize she's not here, but she wants to take the opportunity to thank all of you for coming. This is a long engaging process. It's important that your voice be heard because it is at this time that most of the decisions will be made going forward. Actually, some in the past of how these projects will be built, if it is to be built.

The Councilwoman has been very clear that this is a controversial project. There are people who are for and against this. Each of course has their own agenda. She is taking all of the interests that she would on any project in her District, and she is interested in hearing from you.

The project needs to be understanding in another context. The project will interrupt the infrastructure of Downtown, Civic Center, Little Tokyo, Financial District, for years and that's going to be a problem. Some of this area will not be accessible to anyone during some of the construction period. So it's important to see that as a contextual piece. It will inconvenience bus riders, motorists, people who use bicycles for transportation, pedestrians. And this is not to be a tracking project, but

it is a piece that has to be understood as we go forward. She is very interested that Little Tokyo, as one of the few remains of Japan Town, not be either unnecessarily inconvenienced nor overly disturbed by this process.

She's also interested that the Arts District of Alameda Street experience also as good a relationship with this project as it can. She is very interested in the fully underground alternative to this. Largely because it seems to be the one that the community supports, at least as far as the alternatives that are presented.

She's also interested in it as the project is going forward, looks like that particular stop will not as severely impact the intersection at 1st and Alameda Street. The community having just undergone an extensive inconvenience of rerouting the traffic on that street and having put it back, we've now had almost a years worth of very fine service from the Gold Line that has been well received. We don't really want to pull that section apart and have to redo it again.

The last piece that Councilwoman would like to make known is a small one. 1st Street bridge is closed westbound, and as it has been closed for several years. When that project reconstructing the bridge finishes, which should be hopefully in 2011, that will release full new line of automobiles to come across the bridge. That will also

impact the 1st and Alameda intersection. It will take time for people to get use to the fact that there will be all these cars using that intersection, with a whole new set of pedestrians who are using it as the Gold Line that stops at 1st and Alameda.

So Councilwoman wanted me to thank you for your interests, for your long-term interests, because this is a long-term process. And hopes to hear what you think about this project, as she will take it into consideration as she makes her own decision. Thank you.

MS. KERMAN: Thank you Greg, we appreciate you being here and thank Ms. Perry for her support. I also have a Korean translator. I'd like you to come up and also mention that translation is available in Korean. Please come up to the microphone.

Great. So, hopefully, anybody that needs translation has been connected with. And we will begin the meeting. So with that, I'd like to go into some of the formal processes that we are about to undertake because this is a formal public hearing on the Draft Environmental Documents to the Regional Connecter.

We have a legal obligation to make sure that we hear your comments on the Draft EIS/EIR, and we're here today to hear from you and want to give everyone a chance to speak. Because this is a public hearing, we will not be

answering your questions or engaging in dialogue on any of your comments. If you want to comment on the Draft EIS/EIR, you have several different opportunities to do that. You can fill out a comment sheet which is available at our front desk. You can also mail us a letter or E-mail us. And all public comments must be received by 5:00 o'clock p.m. on October 18th.

Now, as this is a formal NEPA, CEQA process, I now need to provide you with the following statement. So listen up everybody. The Regional Connecter Transit Corridor Study's Draft Environmental Impact Statement, Environmental Impact Report was released on September 3rd, 2010 along with the Notice of Availability and Notice of intent to hold public hearings. To comply with the National Environmental Policy Act, NEPA, and the California Environmental Quality Act CEQA, Section 15087.

The Federal Transit Administration, FTA, and the Los Angeles Metropolitan Transportation Authority, Metro, have prepared a draft Environmental Impact Statement and Environmental Impact Report Document. FTA is the lead agency for the purposes of NEPA. And METRO is the lead agency for the purposes of CEQA. And Notice of Availability and intent to hold public hearing was published in the Federal Register, State of California Clearinghouse, Los Angeles Times, La Opinion, and Necan Sun (phonetic)

and filed with Los Angeles County Clerk and the California State Clearinghouse.

The notices were published on September 3rd, 2010. Copies of the Draft Environmental Document are available for public review between September 3rd and October 18th, and are located in public libraries across Downtown and across the Region, and that list is available by visiting our website or checking with us directly.

In addition, electronic copies of the document were distributed by mail to participating agencies, listed owners of properties identified in the document, local elected officials, and additional interested stakeholders. We ran display ads about the public hearing in OurWeekly, Eastern Sun, Downtown News, Korea Time, Korea Daily, Blog Downtown, Japanese Daily, Repetition Co., and the Pacific Civic Center (phonetic).

Copies of the press release about the EIS/EIR was sent to a distribution of over 50 media organizations. The Draft EIS/EIR information about the hearings, is posted on Metro's website. Information about release of the Draft and the hearings was also printed in brochure forms and distributed widely on Metro busses and trains, as well as hand delivered at key locations. In addition, brokers were sent by U.S. mail to over 65 thousand contacts in the project study area.

The same information was also sent electronically to a distribution list of 1,725 individuals. All of this information is included in the Draft EIS/EIR, and all of this information is available on the website.

Affidavits of publication and copies of detailed mailings are available upon request. And now I would like to introduce you to our project manager. Her name is Dolores Roybal Saltarelli. Dolores will be on a short break soon to deliver another beautiful child into the world. And with that, I would like to introduce the deputy project manager Lora Cornejo. In a little while I'll introduce you to the rest of the project team.

With that, Dolores, I would like to bring you up and have you do your presentation. And after Dolores concludes, it will be time for you, our community, our stakeholders, to provide us with public testimony. Thank you.

MS. ROYBAL SALTARELLI: Good afternoon. Thank you very much for coming out today. The main purpose of this meeting is to hear your comments, so that we can document them and respond to them in the final.

I'm going to keep my presentation short because we want, again, to listen to your comments. And thank you very much for taking the time to come to today's hearing. With that I'll start the presentation.

The Regional Connecter is one of the seven projects that will be implemented by 2035. Purpose of the project is it will do several things in regards to improving our public transit and mobility within the Downtown Region, as well as the rest of the County. Looking at directly connecting the Metro Blue, Gold, and Expo Line. Improving rail travel time and reducing transfers by providing a one seat ride between Azusa and Long Beach and Culver City and East Los Angeles.

It will also increase high capacity transit service for the Downtown as well as the rest of the County. The need, we're looking at continued growth in the Downtown and the rest of the County. The transit system will be expanding and bringing more riders into the area, as well as looking at the existing multiple transfers that are required for local and regional trips.

As I mentioned earlier, we're connecting our light rail system through Downtown, connecting the Blue to the Expo as well as the Gold Line. Providing a one seat ride to connect the region traveling north, south, east to west.

Many of you have seen this development process before. We initiated this project in 2007 with an alternative analysis study. We looked at 36 alternatives in that process. Two were recommended to go forward in the Draft and we initiated the Drafts in January of 2009. If we continue with our current schedule, we're looking at having

the Regional Connecter in operation by 2019.

When we initiated this project in '07, we did not have any funding with the passes of Measure R. In November of 2008, this project was allocated a small fund in the Measure R Project Plan. We continued with the Draft. We then worked extensively with the various stakeholders.

We initiated a working group with the Little Tokyo folks, with their hard work and dedication, we were able to develop a third build alternative that you will see included in the Draft Environmental Document. The Board approved that in February. And we're looking -- we were able to meet our deadline of releasing the Draft in September.

Many of you have the Draft Environmental Document, we are looking at five alternatives. The no build, the transportation systems management. And three build alternatives. The at grade, the underground emphases alternative, and the fully underground. The no build is what you are looking at without the project being in place. For our purposes, you are looking at connecting 7th Street Metro to 1st and Alameda, approximately.

With the TSM alternative, we are looking at what you can do without building permanent infrastructure. And we are recommending two additional bus routes, one connecting upper Grand to lower Grand. And the other one connecting using 2nd and 3rd to close the gap between

7th and Metro and 1st and Alameda, Little Tokyo Arts District Station.

The at grade emphases alternative again, meets the same connection. This time using a light rail system connecting 7th Street Metro to approximately the existing Little Tokyo Arts District Station. What is unique about this alternative is about 47 percent of it, what you see in purple, is actually underground, because you are connecting an existing underground station at 7th Street Metro to an at grade station at Little Tokyo Arts District Station.

The underground emphasis alternative again, makes that same connection in our light rail system opening approximately two miles and our light rail system from 7th and Metro to 1st and Alameda. This time the alignment is about 94 percent underground with an at grade connection at 1st and Alameda.

This alternative as well as the at grade alternative has three stations. One at 5th and Flower, 2nd and Hope, and a station on 2nd Street whether it be at 2nd and Broadway or between Los Angeles and Main.

With the fully underground, that's exactly the same alignment as the underground emphasis alternative, leaving 7th and Metro underneath Flower Street, this time underneath 2nd Street. And instead of being at grade at 1st and Alameda, you're actually underground. This alignment has

four stations. One at 5th and Flower, 2nd and Hope, 2nd and Broadway, and now 2nd and Central.

This would also include two portals in order to connect to the existing Gold Line that's currently in operation. One will be between Alameda and Hewitt and one north of Temple.

Again, as I mentioned earlier, this public hearing is to listen to your comments. You have the opportunity to present them today verbally or you can send them to me written, whether it be E-mail or parcel post, etcetera. We also have a website that we are receiving comments from as well as an E-mail address.

Two important dates that you should be aware of is, we're going to be presenting this project to our Measure R Committee on October 21st at 9:00 a.m. And we'll also be going to the Board for their approval or acceptance of the Draft as well as it is being locally preferred alternative at it's meeting on October 28th at 9:30.

So with that, we would love to hear your comments. Thank you.

MS. KERMAN: Thank you, Dolores. And now this is your time and as we quickly set up our timer for comments, let me tell you how this is going to work. Many of you saw that we have a speaker card, and that's something that you could pick up at the registration desk or if you want to speak and

have not filled out one, raise your hand right now and we'll get you a speaker card.

I'm calling the people up in the in order that I received these cards. You'll have two minutes to speak and you'll be speaking to the microphone that's to your right. The timer as you see, is up on the screen. If you require translation, we will extend that to a four-minute period to allow for translation.

Now, as I mentioned that we're here to receive your comments. And each and every one of your comments will be addressed in the Final Environmental Document. We have a court reporter here that's capturing every word that you say, and you will see the transcript of that document in the final EIS/EIR.

In addition, all of these comments, whether they be written or verbal, will be addressed in the final EIS/EIR. So you have an option today of either speaking, and we will take your oral testimony, or you can put your comments in writing. If you want to be doubly sure, you can do both. And all comments will ultimately be communicated to our Metro board, as well as to the FTA, as they are the final arbiter of the decisions that come out at the final EIS/EIR.

When you're called to the microphone before you begin your statement, if you could please state your name clearly, and that would be for the record. And then you

will have the two minutes that I mentioned. If you have a prepared statement, if perhaps you run out of time, you may please give us that prepared statement and we will enter that into the document. And in order for your comments to be considered, as I mentioned before, October 18th is the deadline and I think we have that information up on the screen.

So at this point we will begin the public testimony and I will call up three people at a time, so that you can be standing in line ready to go.

Our first is Hillary Norton representing F.A.S.T. Followed by Roger Grace, followed by Vahn Bohigian.

PHB1

MS. NORTON: Good afternoon, ladies and gentlemen. My name is Hillary Norton and I'm the executive director of F.A.S.T., Fixing Angelenos Stuck in Traffic. And we are a nonprofit coalition of environmental educational business and transportation organization, specifically committed to short-term solutions to our current traffic crisis.

1

We see the Regional Connector as a very important component of that, especially integrating each stop for the Regional Connector with mobility hubs, where you can have bike share, car share, and transit associated with general bus/etc. We adhere to this board to fully underground option.

However, we also want to make sure that we point

2

PHB1 cont'd

out that as much as possible to look at the 5th and Flower Station, to keep that station which we no has been in consideration and possibly in jeopardy, to look at alternatives, if you can, to make sure that that area is served. To please keep that station, and to look at the impact in all stations and in all parts of the construction on businesses and on transit itself.

2 cont'd

3

We hope that as you construct this important Regional Connecter, you are not going to deter people from switching to transit by making things inconvenient, moving around. Metro has been wonderful about presenting these options and working with the Little Tokyo community about going underground rather than the impact to Alameda, and we thank you for that. And we thank you for your presentations you made to C.C.A. and to other organizations to make sure that we are fully informed. Thank you very much.

4

MS. KERMAN: Thank you, Hillary. Next, it looks like Roger Grace, followed by Vahn Bobigian, followed by Jo-ann Grace.

PHB2

MR. GRACE: Thank you. My name is Roger Grace and I yield my time to Vahn Bobigian and Jo-ann Grace to the Honorable Robert Philibosian.

1

MS. KERMAN: Did I hear that Robert Philibosian is taking your time?

PHB3

MR. BOBIGIAN: My name is Vahn Bobigian and I yield

1

PHB3 cont'd 1 cont'd

PHB4 1

PHB5 1

my time to Robert Philibosian.

MS. GRACE: My name is Jo-ann Grace and I yield my time to Robert Philibosian.

MS. KERMAN: Okay. Robert Philibosian.

MR. PHILIBOSIAN: Thank you very much. I'm Robert Philibosian and I represent the Metropolitan News Enterprise. And the Metropolitan News Enterprise Property is being recommended for taking for a parking lot and construction center during the construction of this project.

The building is the Wilcox Building at 2nd and Spring and next to the it the Olender Building (phonetic). The proposed taking is based on factually unsound propositions. The major tenant is not as proposed in the report of restaurant. It is a newspaper company. There is a small coffee shop there, but the main tenant is a newspaper company.

Metropolitan News Company, Metropolitan News Enterprise goes back to 1901. Taking of these buildings owned by Jo-ann and Roger Grace would be ruinous to their wholly owned business in Metropolitan News Company and thus impair the continued existence of Metropolitan News Enterprise and the Metropolitan News Company and seven other California newspapers.

While a report contends there are 40 employees spread among the five businesses in the building,

PHB5 cont'd

Metropolitan News Company alone employs 47 persons whose jobs would be put in jeopardy. This doom and gloom assessment in contrast to what the report conveys as no meaningful potential adverse impact, is not the accurate facts.

In particular, it is utterly impractical to try to move the operation. There's a seven unit printing press in the basement and to move that press would cost $300,000. And it would probably be impossible to new EPA constrictions and finding another location. The company then would lose it's competitive advantage of being close to the warehouse -- or I'm sorry, the courthouse where it processes legal notices.

1 cont'd

Most significantly, a move would really cripple the company's ability to derive the revenues from it's legal advertising. This is because the moving of the press would take approximately a week and a newspaper must publish more often than that. So they would not be able to publish the newspaper, which would be financially ruinous to the company. And they would lose what they call a Grandfather Clause which entitles the company newspaper, the pre 1923 newspaper, to be printed outside the City in which it's published. The loss of that grandfather status would greatly diminish the newspaper's fair market value should a sale ever be contemplated. Further more, the report fails

PHB5
cont'd

to take into account the historical character of the Wilcox Building, which opened in 1996.

Now, we will be submitting a more detailed and lengthy report of all of this, which will fill in the blanks of some of the things that I am saying. But it is important to point out that there is no need to buy and destroy a cultural building and a historical building built in 1896, to make room for a parking lot in view of the fact that there are existing parking lots and vacant property in close proximity.

1
cont'd

Mr. Bobigian, would you please point out the subject property with your pointer there. And in very close proximity there is a federal property at 2nd and Broadway, would you point that out. That is totally empty and would serve very adequately, more than adequately in the Metropolitan News Building for the staging area for this project. So it would not be necessary to remove or tear down any current commercially used properties.

That property is available. The Federal Government is not using it, and since this is partially a federally funded project, it would seem to make sense to use that as a alternative. There are several other alternatives we will go through quickly. And again, we will submit that in a booklet to staff and to the commission. At 2nd and Hill there's a parking lot -- these are all parking lots,

PHB5
cont'd

either parking lots or parking structures.

The next one is 2nd and Spring, and then also in the background should show the federal building or the federal property, I'm sorry. The federal property as well. And the next one is Main and 2nd. You can see these are all parking lots. And then the next one is 3rd and Main. The next one is Main between 2nd and 3rd.

Then we have 205 Broadway, South Broadway. Then we have 3rd and Main. And we have 3rd and Hill. 3rd and Spring, 2nd and Main, and 2nd and Spring.

1
cont'd

Now, these are all parking lots or parking structures. They're not historical buildings. They are not commercial operating business. Yes, the parking lots are commercial businesses but there's no structures on most of these lots that would have to be removed. And in terms of putting people out of work, we're talking about 47 people at the Metropolitan New Enterprise, as contracts with the parking lot employees of probably two or three or four at the very most.

So this proposition today is in the report, the fatal part of this is that the space that would be rentable in the Metropolitan News building and adjacent building, Wilcox and Olender building, would cause a reputable injury to the owners. The spaces there that are rentable, would not be rentable. No one is going to go into a space that

PHB5 cont'd

they are going to have to vacate because --

1 cont'd

MS. KERMAN: Thank you. We look forward to receiving your prepared statement. Thank you.

MR. PHILIBOSIAN: Thank you.

MS. KERMAN: Next Kenji Suzuki, followed by Alan Havens, followed by Martin Berg.

PHB6

MR. SUZUKI: Thank you. My name is Kenji Suzuki. I have a restaurant in Little Tokyo, 337 East 1st Street. We've been there for about 38 years. Little Tokyo is very rich in history and culture. Most of us have been there. I was there since I was a little kid running around the sidewalk. I'm second generation owner. 38 years is a long time, but I'm a baby compared to the other businesses that have been around much longer. Some just a few years ago celebrated its 100th birthday in Little Tokyo.

1

This project, if it goes through, goes right through the middle of Little Tokyo. Little Tokyo is not very big. It's only two blocks. You are talking about 1st and 2nd Street and you are talking about right down the middle.

I'm not against this project, but you do this, and I think it's been documented, that this type of construction a lot of people don't survive this type of construction. You're talking about taking away businesses that have been a part of Little Tokyo for many, many generations. It's a

PHB6 cont'd

very important part of Little Tokyo. The essence of Little Tokyo would be taken away. 1 cont'd

I hope that there will be alternatives rather than to go right through Little Tokyo. Some of the people that have actually approved this, and I got the chance to speak to some of them, they realize that the fully underground, what that image of fully underground, they were going to dig a whole in one end, dig under Little Tokyo and you come up the other end and nothing would happen to Little Tokyo. And that's not the case.

It's a cut and cover. It's a major operation. Little Tokyo will be devastated and a lot of the stores that's been there for many, many generations, won't be back. I don't know what's going to happen personally, but I'd like to see something happen. I don't want to stop this project but I'd like to see an alternative where you don't have to go right in the middle of Little Tokyo. So that's my speech. Thank you very much. 2

MS. KERMAN: Thank you, Mr. Suzuki. Next, Alan Havens followed by Martin Berg.

PHB7

MR. HAVENS: Hi my name is Alan Haven. I strongly support the main underground option which should not impact surface drafting at 1st and Alameda. 1

However, I do support maintaining one or two tracks of the existing line in case, you know, between now and 2019 enough traffic, people moving 2

PHB7 cont'd

from East Boyle Heights area and North Pasadena. I would continue to want to have this type of movement. That needed to change trains and route that needing the trains changing and route if it were. That's the main traffic, this is a minor a minor thing.

2 cont'd

Also I suggest that in case a multipurpose innovated building moves in North of Alameda -- I'm sorry, East of Alameda and North of 1st, at least have something up on the top to allow people to view East towards the Temple, towards the West towards the Power Tower (phonetic) and so on and so forth, and get a good view of what Little Tokyo looks like in all directions. Okay. That is it.

3

MS. KERMAN: Thank you, Mr. Haven. Next, Martin Berg, followed by Bart Reed, followed by Joan Springhetti.

PHB8

MR. BERG: Thank you for the opportunity to speak. My name is Martin Berg. I live in the Huggins Building on 2nd Street, and I want to reiterate the concerns of my neighbors in Little Tokyo and the Metropolitan News Enterprise and those buildings.

I want to make sure that Metro and the neighborhood mean the same thing by environmental impact. These impacts of construction they are proposing are very dramatic in our neighborhood. And I want to make sure that they are being addressed and that these concerns that have been addressed by the Metropolitan News Enterprise and that those buildings

1

PHB8 cont'd

are being addressed, and that they're not pushed off to the side as just the cost of a major construction project.

These are serious impacts on our neighborhood. We have already endured the construction of the LAPD and the LAPD motor pool parking lot. We don't need another parking lot in our neighborhood. We need care taken of our great historic structure and we need Metro to be partners in that, not fighting it. Thank you. 1 cont'd

MS. KERMAN: Thank you very much, Mr. Berg. Bart Reed, followed by Joan Springhetti, followed by Ellen Miyoshi.

PHB9

MR. REED: I'm Bart Reed, executive director of the transit coalition in Southern California based on profit dealing with transportation ethicacy. We fully support the underground option. 1

We saw the map when you came in and saw the future network of the light rail to Santa Monica, existing to Long Beach out to Azusa, and further east and into East Los Angeles, and further east towards Woodier. You have a network, and when you diminish one station out of the four, you diminish the network. Since the network connects 54 miles from Santa Monica to Azusa to the County Line. It connects Long Beach to the north.

So the important thing is to maintain the network. The moment you take away a station such as you 5th and Flower, you just diminish the connection activity to 2

PHB9 cont'd

Downtown, and people that may or may not make the decision of taking light rail would perhaps not take it because the station isn't there. So we fully support the findings and funds if we move to perhaps a 60 percent alternative on federal match instead of 50. Use Prop A and Prop C funds to make this work. But come together with the money to build a full project.

2 cont'd

3

This is 150-year long project that will remain as part of the fabric for multiple generations of the community and to get sense of functioning. It's important that we do it the right way. We don't have a chance later on to put in a missing station. For those who don't know, between Westlake and Downtown Los Angeles, we skip the station of a Red Line and that community is suffered as a result of no station. So we don't need to repeat some of the mistakes in the pass by skipping stations. And again, fully endorse the underground alternative. Thank you.

4

5

MS. KERMAN: Thank you, Bart. Next, Joan Springhetti followed by Ellen Miyoshi, followed by Hiroshi Yamauchi.

PHB10

MS. SPRINGHETTI: Hello, I'm Joan Springhetti. I'm a residence of the Higgins Building, which is at the corner of 2nd and Main. I fully support the underground no build -- fully underground no build -- I'm sorry. The fully underground alternative. If not that, no build. I think the fully underground is the only one that respects the

1

PHB10 cont'd

community and its safety. If indeed that is approved, I think it's critical how it is actually implemented and that speaks to the concerns that have been addressed here today by the Graces, and it's addressed to the Wilcox Building. 2

Those same issues would be shared -- the impact issues are shared by the residence and commercial businesses in the Higgins Building. And I'm sure all through Little Tokyo and elsewhere, for this to be a successful project, it's really critical that businesses and residences that have established and taken route Downtown, we all know how difficult that process has been to take hold and stay hold, that those interests must be respected and honored in the process. Thank you. 3

MS. KERMAN: Thank you, Joan Springhetti. And Ellen Miyoshi, followed by Hiroshi Yamauchi. And Hiroshi, if you can come down with your interpreter.

PHB11

MS. MIYOSHI: Hi, my name is Ellen Miyoshi. This is on a more smaller personal notice. My husband and I are recent renters at the Higgins. We have seriously been considering buying into the building, and above ground option building the Metro through 2nd Street would completely cancel that. 1

You know, we moved into the building because of the neighborhood, because of the history, and also for me the convenience of commuting up 2nd Street through the 2nd Street, to Glendale to Glendale Avenue to my job in Pasadena

PHB11
cont'd

City College. I don't take the 110 because I want to get to work on time. So anyway and so just to say that as new residences down here, we seriously support the total underground option.

1
cont'd

MS. KERMAN: Thank you, Ellen and welcome to the neighborhood. Hiroshi Yamauchi, followed by Arnold Sacks. And while Hiroshi is coming up to the microphone, I want to remind everybody that there's still plenty of time to fill out a speaker card. We'll be delighted to take a speaker card from you if you don't have one. Raise your hand, we'll get you one.

PHB12

MR. YAMAUCHI: Yes, hi. Good afternoon, everybody. My name is Hiroshi. I am a business owner on the 2nd Street between Central and L.A. Street, but I can speak English only a little, really like this. Now, I ask Ms. Susie to transcribe it to English.

From what I heard so far, everyone has mentioned fully underground is the way to go. From what I heard that everyone seems to have said, fully going underground is the way to go. That's what I thought I heard everyone said here on the stage. But the truth is, this construction, I understand, is going to take a four-year, and then during the construction, it's going to be a whole mess, the construction all over. Everything is clean and it appears to be very nice and all that if it is fully underground.

1

PHB12 cont'd

Okay. Now, I heard it is going to take four years construction. Now, this is something that I found out just recently and, then, how are they going to do this construction with what they call cut and cover? In other words, a little bit cut and cover. Now, if that is the way to move forward. Then a 2nd Street is going to be closed, and I think possibly the 1st Street is going to be closed, also, during the construction. 1 cont'd

MS. KERMAN: Hiroshi, if you could give the translation now to your interpreter and we'll conclude your time.

MR. YAMAUCHI: Okay. Now, earlier, someone representing from Metropolitan News said Little Tokyo's entire business is going to be wiped out and the 400 businesses in there and, also, including the residence, and altogether 2,000 people, plus their family members. So when you have 2,000 people times 10 times -- total 2,000 people is going to be impacted.

I am so fearful that all of us have no place to go. And so I am very worried and concerned, just the same as someone from Metropolitan Newspaper said. 2

MS. KERMAN: Thank you very much.

MR. YAMAUCHI: One more.

MS. KERMAN: I'm going to give you one more because we did have some technical difficulty.

MR. YAMAUCHI: So please try to think about -- try to 3

PHB12 cont'd

think about the Red Line to use the Red Line, Gold Line, Red Line, the Blue Line, I think it's possible. So you know, if Metro has a budget to new construction, but they can use that same budget to modify on Red Line. Please, think about that. If it's possible, there's no impact on Little Tokyo business and Downtown business, Spring Street business is no impact. Also, we can create environmental program.

3 cont'd

MS. KERMAN: Thank you. Okay. Next, Arnold Sacks (phonetic), followed by Wilson Liu, followed by Jerard Wright.

PHB13

MR. SACKS: Thank you. Good morning. Arnold Sacks (phonetic). I'm glad that you have translation for people who speak Korean and I'm glad you have a translation to the people who speak Japanese. Can we get a translation in English as to why this Downtown Connecter has taken approximately 20 -- 30 years. Blue Line from Long Beach to 7th and Metro was continued through Pasadena that was the reason for the Blue Line construction authority that was created by the state legislation.

Why this gap has taken 30 years to fill. Why and how much in litigation will be developed because we have all these new people that have come in and moved into Downtown and expressed an interest because now they're part of the community. You need to get a translation on that. Now, it's a billion dollar project. What would it have cost if

1

PHB13
cont'd

it would have been continued in a timely manner. You would think, okay, we'll build from Long Beach to 7th and Metro and then we'll build a second stage. Instead we build the Red Line.

If anyone can look at the history of Metro not just today, but go back and look at the map. You saw a map earlier of what it would look at in 2035. Look at a map like 1980, you'll see the Blue Line goes from Long Beach to Pasadena. The Red Line which is now a Purple Line would have gone to Santa Monica eastbound. It has been pieced mailed together all to the benefit of making some money. And the organizations that got up answer the question, why so long?

Why when the Metro got $640 million they gave to the Blue Line construction authority, why is it designated to the Gold Line construction? Follow the money. And you'll see the question mark. There's four supervisors that have been involved in the organizations of these buildings since the inception --

1
cont'd

MS. KERMAN: Thank you very much. Next, Wilson Liu, followed by Jerard Wright, followed by Tracey Chavira.

PHB14

MR. LIU: Good morning. This is a follow-up to our September 28th comment that we had two more additional comments. I represent the -- my name is Wilson Liu and I represent Little Tokyo Business Improvement District, as

1

PHB14
cont'd

well as the Little Tokyo Business Association. One of the items as Little Tokyo Business Interruption Consortium the Consortium of Little Tokyo Business Association, the little Tokyo Business Improvement District, Chamber of Commerce of Southern California, and the Little Tokyo Community Counsel performed to work along with Metro Staff and any other governmental agency having jurisdiction, to develop policy regulations and procedures, to resolve issues arising from adverse business interruption during the course of construction of the Regional Connecter Project.

1
cont'd

The Little Tokyo Business Interruption Consortium shall be shared by the president of the respectfully organization listed. Any business interruption committee shall be formed -- shall not be limited to the supervision of a single Little Tokyo organization or granted exclusive power of oversight.

Little Tokyo has many organizations which are listed four, are considered a major organization represented the process of the business sector, nonprofit organization sector and a residential sector, to allow a single Little Tokyo organization to act as the sole and exclusive leadership of those would not be proper.

The Little Tokyo Business Interruption Consortium used the proper structure to work with Metro Staff in addressing the serious construction impact of the

PHB14 cont'd

Little Tokyo Community. 1 cont'd

The second item is the Little Tokyo Construction Mitigation Program. We encourage the establishment of the Little Tokyo Construction Mitigation Program for the purpose of compensating construction impact business interruption injuries, should Metro or any other government agency establish in litigation funding program for construction impact related business interruption injuries or other construction impact alters the business operations resulting in physical changes and -- 2

MS. KERMAN: Thank you, Mr. Liu. If you'd like to --

MR. LIU: I'd like to submit this, thank you so much.

MS. KERMAN: Wonderful. Thank you so much.

Jerard Wright, followed by Tracey Chavira, followed by Russell Brown.

PHB15

MR. WRIGHT: All right. Good afternoon. I'm Jerard Wright and I'm speaking for myself. I've been involved within this project in various forms for many, many years. I'm not going to give away how long. But in terms of right now, where we're at is a critical stage in terms of funding the project, because right now there is a projected close to $200 million short fall for the fully underground option, and that may require reduction of some stations. 1

I don't want to see the stations reduced. I think

PHB15 cont'd

every station is a vital one and a very important one. However, if there are opportunities where, you know, I've mentioned look for a 60 percent federal match. 1 cont'd

Look for unaligned Prop A and B funds for the non-subway portions, such as the pedestrian bridge. Such as the 1st Street widening that you need to put in the portal. Such as the new transition structure north of Temple. Just find creative and inventive ways to try to bridge the funding gaps because if we go to the FTA for a handout, the first thing they're going to ask us is how much more are we going to get in return. That's one thing. 2

The other component is, if we can't get that funding, let's look at ways of combining some stations into larger super stations. Such as the Bunker Hill off of 5th and Flower and multiple portal being a essential station that has multiple points of access, while still maintaining access, connectivity, community, and keeping the costs down or in hopes of keeping the cost down because if we can't find that funding gap, there's probably going to end up probably a at grade alternative. Which from many comments over the last three years, that's not the right option. 3

So I just want to find a way to find that funding gap, bridge that funding gap, so this project can go forward. Thank you very much. 4

MS. KERMAN: Thank you, Jerard. I've been also asked

to remind everyone that we have fact sheets out front, so don't forget to pick them up on the way out. And Tracey.

PHB16

MS. CHAVIRA: Good afternoon, Tracey Chavira Central City Association. Let me begin by acknowledging Metro Staff especially Ann and Dolores Roybal Saltarelli for keeping this process moving along steadily. Metro staff, the consultants, the Robert Group have been extremely responsive to our members and generous with their time. So thank you. 1

CCA supports the fully underground alternative, which will generate great benefits. We've expressed these before but just for the record. First it will be impervious to above ground accidents, making it the most reliable option for commuters. Second, it's inspected to govern the most transit riders. Third, it won't create street level visual clutter, which might interfere with revitalization parts of Downtown. Finally, the Regional Connecters scored high with federal funding criteria, making it one of the best proposals for that funding. 2

We also support the Flower and 5th Station and the Financial District. We've heard that the station might be eliminated due to a budget short fall, but we urge you to move forward with this station. And it is greatly important to the Financial District which that contributes greatly to Downtown and to the City's economic recovery. So we respectfully request that Metro improve the fully 3

PHB16
cont'd

underground alternative including the Flower and 5th Station. Thank you. 3 cont'd

MS. KERMAN: Thank you, Tracy. Next, Russell Brown, followed by Don Garza, followed by Yoshi Maruyama.

PHB17

MR. BROWN: Thank you. Russell Brown, executive director of the historic Downtown Theater. I'm also one of the trustees for bringing back Broadway. I want to thank you for the outreach. This has been a process that's been more than three years. I know well before Measure R you were working with the community groups and the neighborhood council. 1

All of organizations unanimously and fully support the fully underground project, and I want to really thank you for listening to the community as we work through a lot of the issues and especially the complications with Little Tokyo. Just to make a correction, the cut and cover is only used for stations. It's not used for the track line. So the gentleman who mentioned that was in correct in his interpretation of that. 2

We do not support the surface route, all you have to do is look at Washington Boulevard and see how unfriendly transit is. You would not only have that separating all the communities, and many of the concerns -- all of the concerns that Little Tokyo have are magnified a lot with the surface route. 3

PHB17
cont'd

You'd also have two stations that straddle City Hall. Something as simple as a lost backpack will shutdown the whole system for security reasons. The fully underground station, not only takes care of all of those and mitigates it gives you great opportunities for transit oriented development. 3 cont'd

The 5th and Flower Station is critical because 7th and Metro will be maxed out. Once you have both the Expo Line and the Blue Line coming into that station. The 5th and Flower Station also allows a connection with the 5th and Grand Streetcar. 4

The 2nd and Broadway Station is critical because you also have connections with the Streetcar, with the theaters, and also the Red Line Civic Center Station. 5

So thanks again for your outreach. Thanks for working with the community, and we enthusiastically support the fully underground program. 6

MS. KERMAN: Thank you, Russell. Don Garza, followed by Yoshi Maruyama.

PHB18

MR. GARZA: Yes, my name is Don Garza. I've been a residence of Downtown for the past, probably, 11 years now. So when people from Little Tokyo that have been there for a long time speak, I have a tendency to listen. And I'm in agreement. There should be not a mitigation, especially for the businesses because you see sort of things, whether they be underground or overground, they are going to have some 1

PHB18 cont'd

impact.

But I am in full support of underground. It's the way to go. It's the way it needs to be done. Connection needs to be made. 5th and Flower needs to be there. These connections are going to be very important, specifically because there are very many hotels around there that augment the L.A. Live Hotel. And you're going to start seeing lots and lots -- if not already, we have a lot of tourism and we have a lot of business.

This extension needs to happen tomorrow. It does not need to happen 10 years from now. It does not need to happen 15 years from now. We need to get our buddy, Antonio Villaraigosa, all you guys up there. Whether it be -- whoever the next mayor is going to be. Whether it be Jan Perry or even Russell Brown or anybody in this room. I don't care if it is this person in the front row.

Get up there to Washington DC to get this thing built. This is jobs. This is money. This is consultant money. This is GIR consultant money. This is just plain money that we need here that's going to help our community, especially Downtown and connect a whole region. Because when people come to L.A. they do not just want a Hollywood experience. They do not just want a Anaheim experience. They want a whole experience.

I got to tell you when you opened up that line to

1 cont'd

2

3

4

PHB18
cont'd

the Eastside, people were very excited. I use it now to go and enjoy my Eastside experience it's easier. I can even go to East Los Angeles College, I don't have ride on Cesar Chavez. So I am in support of fully underground along with the C.C.A., along with everybody that should be willing to want to have this thing fully underground.

4
cont'd

MS. KERMAN: Thank you, Don. Yoshi Maruyama followed by Christine Baisez.

PHB19

MR. MARUYAMA: My name is Yoshi Maruyama. I own Sbabu Shabu House Restaurant, and I know this project is very good at the beginning. But Plaza tenants, okay, we want to know the impact of this construction is awful. I can't imagine this, and I can't sleep sometimes because as an example City Hall has a little demonstration. They blocked a couple streets, our business down 30, 40 percent.

When they do lunch and dinner, I got a whole day. The customers won't come. They block the street. If this project happens, how long are they going to block the streets for this construction. Couple weeks, no couple years. Four, five years. It's real impact nobody tell you how the impact is. Nobody telling how they are going to do it. And who's going to take care of our businesses.

This is the papa and mama restaurant and other restaurants too, but nobody cares. You have to show how much damage it is going to be. Project is okay. I

1

PHB19
cont'd

understand them, this one. But for the underground 7th Street is definitely no, that's all. Thank you. 1 cont'd

MS. KERMAN: Thank you very much, Yoshi. Christine Baisez. And Christine is my last speaker card unless there are others. If you'd like to speak, raise your hand, we'll be happy to get you a speaker card.

PHB20

MS. BAISEZ: Hello, my name is Christine Baisez. I am your residence of the Higgins building (inaudible). And I wish no metro in the area. There is a need for a metro. I wish it could be fully underground. I go there with my daughter. We love to bike and ride and we love community of Japanese Town and it's not to be -- not to be hurt by this. Thank you. 1

MS. KERMAN: Thank you, Christine. Do I have any other individuals that have filled out speaker cards or would like to? Well, in the meantime, let me also let you know that we are here 15 more minutes till 1:00 o'clock, to take your comments.

I'd like to also introduce you to some additional Metro personnel, who are here today because they care about listening to what you have to say, and our executive director of countywide planning, Martha Welborn.

Martha, if you could stand up and let everybody know that you are with us today. Diego Cardoso, our Executive officer of planning. I saw Robin Laired (phonetic)

earlier. I saw Lynda Bybee, our executive officer of communications. We have our huge project team. We're all wearing these big name tags. We're certainly here to talk to you after our official hearing one on one, but we encourage you to stay tuned.

Up on the board you see how you can contact us if you feel that, even though you gave oral testimony today, it was not sufficient. Feel free to send us written comments. If you have other things that you want to say, you know, there are many ways to do it. E-mail us, send us a written letter. We don't text or Twitter officially, but you might be able to find us there.

On behalf of the entire project team, we would like to thank you for joining us at this official and final hearing for the Regional Connecter. We want to encourage you to attend our board meeting on October 28th. And prior to that, our committee meeting, the Measure R Committee on October 21st at 9:00 o'clock in the morning.

With that, I will conclude the public hearing, unless I hear additional people that want to speak. And again, thank you all for coming out during your lunch today in this rainy, drizzly day, but we appreciate all of you staying with us on this project. Thank you.

(Hearing concluded at 12:47 p.m.)

PHB1

Responses to Comments from Fixing Angelenos Stuck in Traffic, Norton, Hilary

Response to Comment PHB1-1

Thank you for your comment. Support for the Fully Underground LRT Alternative is noted. The Metro Board of Directors voted on October 28, 2010 to designate the Fully Underground LRT Alternative as the Locally Preferred Alternative. Bicycle racks would be part of station amenities and existing bus routes that operate at proposed station locations would be accommodated. Park and rides are not proposed as part of this project.

Response to Comment PHB1-2

Support for the Flower/5th/4th Street station is noted. The Metro Board of Directors voted on October 28, 2010 to designate the Fully Underground LRT Alternative without the Flower/5th/4th Street station as the Locally Preferred Alternative. The deletion of the station was done in an effort to reduce the cost of the project while still meeting the project's purpose and need. An enhanced pedestrian walkway connecting the 4th/Flower Streets area to the existing 7th Street/Metro Center Station would be constructed on Flower Street to improve access to the Financial District. Metro understands the importance of serving the Financial District and believes that the Locally Preferred Alternative still meets the purpose and need of the project despite the station deletion. Deletion of the Flower/5th/4th Street station would result in minimal ridership because most riders would use the 2nd/Hope Street station or 7th Street/Metro Center Station, which would service the Financial District. After the October 28, 2010 meeting, the Metro Board of Directors directed staff to meet with the Financial District stakeholders to discuss options for privately funding the Flower/5th/4th Street station, but no funding sources were identified. However, the design of the Locally Preferred Alternative would not preclude a station at 5th and Flower Streets from being built as a possible future, separate project.

Response to Comment PHB1-3

Impacts associated with each alternative, including impacts associated with construction and proposed stations, were analyzed in Chapter 3, Transportation Impacts and Mitigation, and Chapter 4, Environmental Analysis, Consequences, and Mitigation, of the Draft EIS/EIR and this Final EIS/EIR. Please refer to Chapter 3, Transportation Impacts and Mitigation, Section 4.14, Economic and Fiscal Impacts, and Section 4.18, Construction Impacts, of the Draft EIS/EIR and this Final EIS/EIR for construction-related impacts on transit and businesses.

Response to Comment PHB1-4

Thank you for your comment. The purpose of this project is to improve the region's public transit service and mobility by connecting the light rail service of the Metro Gold Line to the Metro Blue Line and the Metro Expo Line (currently under construction).

Responses to Comments from Metropolitan News Enterprise, Philibosian, Robert

Response to Comment PHB5-1

The Metro Board of Directors voted on October 28, 2010 to remove the Wilcox and Olender Buildings (APNs 5149-007-006 and 5149-007-005) from consideration as acquisitions for the Regional Connector project. Only a subsurface easement beneath APN 5149-007-006 would be required for construction of the Locally Preferred Alternative.

PHB6

Responses to Comments from Suehiro Café, Inc., Suzuki, Kenji

Response to Comment PHB6-1

Metro values the uniqueness and age of businesses in Little Tokyo and will continue to work with the community to minimize adverse impacts. As described in Chapter 2, Alternatives Considered, of this Final EIS/EIR, the Locally Preferred Alternative has been refined since publication of the Draft EIS/EIR. The refined alignment would not involve cut and cover construction on 2nd Street in Little Tokyo, thus eliminating the need for lengthy closures of the street and sidewalk. Temporary intermittent closures may still be needed, but these would be less frequent than with the non-refined alternative described in the Draft EIS/EIR. No surface disruption or impacts to businesses on 2nd Street in Little Tokyo are anticipated as a result of the passage of the tunnel boring machine. These refinements would reduce impacts to businesses both on 2nd Street and throughout the community. Metro will implement the mitigation measures shown in the Mitigation Monitoring and Reporting Program for the Locally Preferred Alternative (Chapter 8) of this Final EIS/EIR to support the Little Tokyo business community throughout the construction phase of the project.

Response to Comment PHB6-2

Nearly three dozen alternatives were studied during the Alternatives Analysis phase of the project, some of which bypassed the Little Tokyo neighborhood. Through several stages of screening, based on community input and technical considerations, the Fully Underground LRT Alternative was designated the Locally Preferred Alternative. The Regional Connector would involve both cut and cover and tunnel boring machine construction. Much of the alignment in the Little Tokyo area would be constructed using the tunnel boring machine method, which would minimize surface impacts. As described in Chapter 2, Alternatives Considered, and Section 4.18, Construction Impacts, of this Final EIS/EIR, the Locally Preferred Alternative has been refined based on Draft EIS/EIR comments to include less cut and cover, and to move the tunnel boring machine construction staging area farther from the center of Little Tokyo. Metro will implement the mitigation measures in the Mitigation Monitoring and Reporting Program for the Locally Preferred Alternative (Chapter 8) of this Final EIS/EIR with the goal of supporting businesses throughout the construction phase. This will include targeted marketing efforts and other in-kind assistance. It is Metro's goal to minimize the potential for business interruption.

PHB7

Responses to Comments from Havens, Alan

Response to Comment PHB7-1

Thank you for your comment. Support for the Fully Underground LRT Alternative is noted. The Metro Board of Directors voted on October 28, 2010 to designate the Fully Underground LRT Alternative as the Locally Preferred Alternative.

Response to Comment PHB7-2

The surface tracks connecting the Pasadena and East Los Angeles branches of the Metro Gold Line would no longer be in service once the Regional Connector opens, and may ultimately be removed. The majority of transit passengers riding the Metro Gold Line from East Los Angeles are destined for downtown Los Angeles and points westward. These passengers would benefit from seamless travel to westside destinations. Transit riders traveling from East Los Angeles to Pasadena (and in the future to Montclair) would be required to transfer at the new underground station in Little Tokyo. Ridership forecasting results show that the Regional Connector would have adequate capacity to accommodate the projected volumes of transferring passengers.

Response to Comment PHB7-3

The commenter recommends development of the parcel located at the northeast corner of 1st and Alameda Streets. Comment acknowledged. Development of this parcel is not a part of this project and no further response is required.

PHB8

Responses to Comments from Berg, Martin

Response to Comment PHB8-1

The Metro Board of Directors voted on October 28, 2010 to remove the Wilcox and Olender Buildings (APNs 5149-007-006 and 5149-007-005) from consideration as acquisitions for the Regional Connector project. Only a subsurface easement beneath APN 5149-007-006 would be required for construction of the Locally Preferred Alternative.

PHB9

Responses to Comments from The Transit Coalition, Reed, Bart

Response to Comment PHB9-1

Thank you for your comment. Support for an underground option is noted. The Metro Board of Directors voted on October 28, 2010 to designate the Fully Underground LRT Alternative as the Locally Preferred Alternative.

Response to Comment PHB9-2

Support for the Flower/5th/4th Street station is noted. The Metro Board of Directors voted on October 28, 2010 to designate the Fully Underground LRT Alternative without the Flower/5th/4th Street station as the Locally Preferred Alternative. The deletion of the station was done in an effort to reduce the cost of the project while still meeting the project's purpose and need. An enhanced pedestrian walkway connecting the 4th/Flower Streets area to the existing 7th Street/Metro Center Station would be constructed on Flower Street to improve access to the Financial District. Metro understands the importance of serving the Financial District and believes that the Locally Preferred Alternative still meets the purpose and need of the project despite the station deletion. Deletion of the Flower/5th/4th Street station would result in minimal ridership losses because most riders would use the 2nd/Hope Street station or 7th Street/Metro Center Station, which would service the Financial District. After the October 28, 2010 meeting, the Metro Board of Directors directed staff to meet with the Financial District stakeholders to discuss options for privately funding the Flower/5th/4th Street station, but no funding sources were identified. However, the design of the Locally Preferred Alternative would not preclude a station at 5th and Flower Streets from being built as a possible future, separate project.

Response to Comment PHB9-3

In response to the increased cost-effectiveness of the three-station Locally Preferred Alternative over the four-station Fully Underground LRT Alternative, Metro is requesting a 60 percent federal funding match. The Federal Transit Administration New Starts Cost-Effectiveness Index for the proposed project, as of the publication of the Draft EIS/EIR, was $13.68 (a "medium-high" rating). Proposition A and C funds are largely unusable for the fully underground Regional Connector due to the voter-approved Metropolitan Transportation Authority Reform and Accountability Act of 1998. Refer to Chapter 6, Cost and Performance Considerations and Summary Comparison of Alternatives, of this Final EIS/EIR.

Response to Comment PHB9-4

An enhanced pedestrian walkway connecting the 4th/Flower Streets area to the existing 7th Street/Metro Center Station would be constructed on Flower Street to improve access to the Financial District. Metro understands the importance of serving the Financial District and believes that the Locally Preferred Alternative still meets the purpose and need of the project despite the station deletion. However, the design of the Locally Preferred Alternative would not preclude a station at 5th and Flower Streets from being built as a possible future, separate project.

Response to Comment PHB9-5

Thank you for your comment. Support for an underground alternative is noted. The Metro Board of Directors voted on October 28, 2010 to designate the Fully Underground LRT Alternative as the Locally Preferred Alternative.

PHB10

Responses to Comments from Springhetti, Joan

Response to Comment PHB10-1

Thank you for your comment. Support for the Fully Underground LRT Alternative is noted. The Metro Board of Directors voted on October 28, 2010 to designate the Fully Underground LRT Alternative as the Locally Preferred Alternative.

Response to Comment PHB10-2

The Metro Board of Directors voted on October 28, 2010 to remove the Wilcox and Olender Buildings (APNs 5149-007-006 and 5149-007-005) from consideration as acquisitions for the Regional Connector project. Only a subsurface easement beneath APN 5149-007-006 would be required for construction of the Locally Preferred Alternative.

Response to Comment PHB10-3

Metro recognizes the importance of businesses and residences to the revival of the downtown Los Angeles community. Implementation of mitigation measures in the Mitigation Monitoring and Reporting Program for the Locally Preferred Alternative (Chapter 8) of this Final EIS/EIR would reduce the impacts of construction. It is Metro's goal to minimize impacts. Metro will work with the community throughout the project and incorporate community input into the construction process.

PHB11

Responses to Comments from Miyoshi, Ellen

Response to Comment PHB11-1

Opposition to the At-Grade Emphasis LRT Alternative and support for the Fully Underground LRT Alternative is noted. With the Regional Connector in place, the station at 2nd and Broadway would have direct train service to Pasadena. The Metro Board of Directors voted on October 28, 2010 to designate the Fully Underground LRT Alternative as the Locally Preferred Alternative.

PHB12

Responses to Comments from Koraku Group, Inc., Yamauchi, Hiroshi

Response to Comment PHB12-1

Construction durations for the Fully Underground LRT Alternative were shown in Table 4.18-2 of the Draft EIS/EIR and the Supplemental EA/Recirculated Draft EIR Sections and for the Locally Preferred Alternative in Table 4.18-1 of this Final EIS/EIR. The entire construction process would take four to five years, but the duration of construction in any one location in Little Tokyo would be less than four years. Metro will implement the mitigation measures in the Mitigation Monitoring and Reporting Program for the Locally Preferred Alternative (Chapter 8) of this Final EIS/EIR in order to minimize the construction impacts of the project. As described in Chapter 2, Alternatives Considered, and Section 4.18, Construction Impacts, of this Final EIS/EIR and the Supplemental EA/Recirculated Draft EIR Sections, the Locally Preferred Alternative has been refined since publication of the Draft EIS/EIR. The refined alignment would not involve cut and cover construction on 2nd Street in Little Tokyo, thus eliminating the need for lengthy closures of the street and sidewalk. Temporary intermittent closures may still be needed, but these would be less frequent than with the non-refined alternative described in the Draft EIS/EIR. Cut and cover would be needed at the intersection of 1st and Alameda Streets in order to construct the underground junction.

Response to Comment PHB12-2

It is Metro's goal to minimize impacts to businesses in Little Tokyo. Even under the worst-case scenario studied in the Draft EIS/EIR, none of the analysis determined that all business in Little Tokyo would be eliminated. Metro has made refinements to the Locally Preferred Alternative to reduce impacts to businesses, and will implement the mitigation measures shown in the Mitigation Monitoring and Reporting Program for the Locally Preferred Alternative (Chapter 8) of this Final EIS/EIR to ensure assistance is provided for affected businesses throughout the construction phase of the project. A worst-case scenario list of businesses that would be acquired was shown in Section 4.2.3.5 of the Draft EIS/EIR, and some of these businesses would no longer need to be acquired due to refinements made to the Locally Preferred Alternative.

Response to Comment PHB12-3

The Metro Red and Purple Lines use a different rail transit mode than the Metro Blue, Gold, and future Expo Lines. The tracks and station platforms are not compatible due to differences in train floor height, train width, and method of electricity conveyance. In order to accommodate the Metro Blue, Gold, and future Expo Line trains, the Regional Connector must have a new alignment separate from the Red/Purple Line tunnels.

PHB13

Responses to Comments from Sachs, Arnold

Response to Comment PHB13-1

Public hearings were conducted in English; therefore, English translators were not needed. Metro delayed implementation of a light rail connection between the Metro Blue Line and the Metro Gold Line due to funding constraints. Metro will continue working with downtown residents throughout the duration of the project. Cost estimates for earlier proposed light rail connector routes through the downtown area are not available at the same level of detail as the Locally Preferred Alternative. Metro fare revenues do not cover the full construction and operation expenses of the transit system, and Metro does not generate profit from transit operations. The Blue Line Construction Authority was tasked with construction of the Los Angeles-Pasadena light rail project, which was later named the Metro Gold Line.

PHB14

Responses to Comments from Little Tokyo Business Association and Little Tokyo Business Improvement District, Liu, Wilson

Response to Comment PHB14-1

Metro welcomes the opportunity to work with a Little Tokyo business consortium and all other affected stakeholders throughout the duration of the project. Metro will also work with the Regional Connector Community Leadership Council to serve all businesses affected by Regional Connector construction.

Response to Comment PHB14-2

The Mitigation Monitoring and Reporting Program for the Locally Preferred Alternative (Chapter 8) of this Final EIS/EIR contains the confirmed mitigation measures intended to assist Little Tokyo businesses and minimize adverse impacts during the construction phase of the project. It is Metro's goal to minimize the potential for business interruption.

PHB15

Responses to Comments from Wright, Jerard

Response to Comment PHB15-1

Support for the Flower/5th/4th Street station is noted. The Metro Board of Directors voted on October 28, 2010 to designate the Fully Underground LRT Alternative without the Flower/5th/4th Street station as the Locally Preferred Alternative. The deletion of the station was done in an effort to reduce the cost of the project while still meeting the project's purpose and need. An enhanced pedestrian walkway connecting the 4th/Flower Streets area to the existing 7th Street/Metro Center Station would be constructed on Flower Street to improve access to the Financial District. The deletion of the station improves the Federal Transit Administration New Starts Cost-Effectiveness Index, and makes the project more competitive to receive funding up to a 60 percent federal share. However, the design of the Locally Preferred Alternative would not preclude a station at 5th and Flower Streets from being built as a possible future, separate project.

Response to Comment PHB15-2

Metro is actively seeking ways to reduce the costs of the project, and is considering all available funding sources. Proposition A and C funds are largely unusable for the fully underground Regional Connector due to the voter-approved Metropolitan Transportation Authority Reform and Accountability Act of 1998.

Response to Comment PHB15-3

As a cost-cutting measure, the Metro Board of Directors voted on October 28, 2010 not to include the Flower/5th/4th Street station in the Locally Preferred Alternative. However, under the Locally Preferred Alternative, an enhanced pedestrian walkway connecting the 4th/Flower Streets area to the existing 7th Street/Metro Center Station would be constructed on Flower Street to improve access to the Financial District. The remaining Regional Connector stations are upwards of one-half mile apart, which is too great a distance for them to be combined.

Response to Comment PHB15-4

Metro will continue to explore options for reducing the cost of the project.

PHB16

Responses to Comments from Central City Association, Chavira, Tracey

Response to Comment PHB16-1

Thank you for your comment.

Response to Comment PHB16-2

Thank you for your comment. Support for the Fully Underground LRT Alternative is noted. The Metro Board of Directors voted on October 28, 2010 to designate the Fully Underground LRT Alternative as the Locally Preferred Alternative.

Response to Comment PHB16-3

Support for the Flower/5th/4th Street station is noted. The Metro Board of Directors voted on October 28, 2010 to designate the Fully Underground LRT Alternative without the Flower/5th/4th Street station as the Locally Preferred Alternative. The deletion of the station was done in an effort to reduce the cost of the project while still meeting the project's purpose and need. An enhanced pedestrian walkway connecting the 4th/Flower Streets area to the existing 7th Street/Metro Center Station would be constructed on Flower Street to improve access to the Financial District. Metro understands the importance of serving the Financial District and believes that the Locally Preferred Alternative still meets the purpose and need of the project despite the station deletion. Deletion of the Flower/5th/4th Street station would result in minimal ridership losses because most riders would use the 2nd/Hope Street station or 7th Street/Metro Center Station, which would service the Financial District. After the October 28, 2010 meeting, the Metro Board of Directors directed staff to meet with the Financial District stakeholders to discuss options for privately funding the Flower/5th/4th Street station, but no funding sources were identified. However, the design of the Locally Preferred Alternative would not preclude a station at 5th and Flower Streets from being built as a possible future, separate project.

PHB19

Responses to Comments from Shabu Shabu House Restaurant, Maruyama, Yoshi

Response to Comment PHB19-1

As described in Chapter 2, Alternatives Considered, and Section 4.18, Construction Impacts, of this Final EIS/EIR, the Locally Preferred Alternative has been refined since publication of the Draft EIS/EIR. The refined alignment would not involve cut and cover construction on 2nd Street in Little Tokyo, thus eliminating the need for lengthy closures of the street and sidewalk. This reduces the potential disruption in Little Tokyo due to construction. Construction durations for the Fully Underground LRT Alternative were shown in Table 4.18-2 of the Draft EIS/EIR and for the Locally Preferred Alternative in Table 4.18-1 in this Final EIS/EIR. The entire construction process would take four to five years, but the duration of construction in any one location in Little Tokyo would be less than four years. Metro will implement the mitigation measures in the Mitigation Monitoring and Reporting Program for the Locally Preferred Alternative (Chapter 8) of this Final EIS/EIR with the goal of supporting businesses throughout the construction phase.

RESPONSES TO COMMENTS ON THE SUPPLEMENTAL EA/RECIRCULATED DRAFT EIR SECTIONS

Introduction

The Regional Connector Transit Corridor Project Supplemental Environmental Assessment/ Recirculated Sections of the Draft EIR (Supplemental EA/Recirculated Draft EIR Sections) was made available to identified stakeholders, agencies, and the general public for review and comment for a 45-day review period from July 22, 2011 through September 6, 2011.

This volume of this Final EIS/EIR contains copies of all written comments and provides written responses to all comments received on the Supplemental EA/Recirculated Draft EIR Sections. A total of 31 comment letters were received during the public review period. Overall, a total of 263 individual comments were received on the Regional Connector Transit Corridor Project Supplemental EA/Recirculated Draft EIR Sections.

The format for the responses to comments presents each comment letter bracketed into separate comments, followed by corresponding responses to each individual comment of that comment letter. The comment letters and responses are organized and grouped into the following categories based on the affiliation of the commenter as follows:

Letter ID Prefix	Description
R-AF	Federal Agency
R-AL	Local Agency
R-AS	State Agency
R-BU	Businesses and Business Groups
R-CN	Community Groups and Non-Profit Organizations
R-PC	Public Comment

To assist the reader's review and use of the responses to comments, two indices that provide the commenter name, affiliation, and comment letter identification designator (e.g., R-PC1) for each comment letter are provided below. The first index lists all the comment letters by comment letter identification designator and the second lists all of the comment letters alphabetically by commenter's last name.

Ms. Dolores Roybal Saltarelli
Los Angeles County Metropolitan Transportation Authority
1 Gateway Plaza, MS 99-22-2
Los Angeles, California 90012

Dear Ms. Saltarelli:

This is in response to your request for comments regarding the Regional Connector Transit Corridor Project Supplemental Environmental Assessment/Recirculated Sections of the Draft Environmental Impact Report.

Please review the current effective countywide Flood Insurance Rate Maps (FIRMs) for the County (Community Number 065043) and City (Community Number 060137) of Los Angeles, Maps revised September 26, 2008. Please note that the City of Los Angeles, Los Angeles County, California is a participant in the National Flood Insurance Program (NFIP). The minimum, basic NFIP floodplain management building requirements are described in Vol. 44 Code of Federal Regulations (44 CFR), Sections 59 through 65.

A summary of these NFIP floodplain management building requirements are as follows:

- All buildings constructed within a riverine floodplain, (i.e., Flood Zones A, AO, AH, AE, and A1 through A30 as delineated on the FIRM), must be elevated so that the lowest floor is at or above the Base Flood Elevation level in accordance with the effective Flood Insurance Rate Map.

- If the area of construction is located within a Regulatory Floodway as delineated on the FIRM, any ***development*** must not increase base flood elevation levels. **The term *development* means any man-made change to improved or unimproved real estate, including but not limited to buildings, other structures, mining, dredging, filling, grading, paving, excavation or drilling operations, and storage of equipment or materials.** A hydrologic and hydraulic analysis must be performed *prior* to the start of development, and must demonstrate that the development would not cause any rise in base flood levels. No rise is permitted within regulatory floodways.

1

- All buildings constructed within a coastal high hazard area, (any of the "V" Flood Zones as delineated on the FIRM), must be elevated on pilings and columns, so that the lowest horizontal structural member, (excluding the pilings and columns), is elevated to or above the base flood elevation level. In addition, the posts and pilings foundation and the structure attached thereto, is anchored to resist flotation, collapse and lateral movement due to the effects of wind and water loads acting simultaneously on all building components.

- Upon completion of any development that changes existing Special Flood Hazard Areas, the NFIP directs all participating communities to submit the appropriate hydrologic and hydraulic data to FEMA for a FIRM revision. In accordance with 44 CFR, Section 65.3, as soon as practicable, but not later than six months after such data becomes available, a community shall notify FEMA of the changes by submitting technical data for a flood map revision. To obtain copies of FEMA's Flood Map Revision Application Packages, please refer to the FEMA website at http://www.fema.gov/business/nfip/forms.shtm.

1
cont'd

Please Note:

Many NFIP participating communities have adopted floodplain management building requirements which are more restrictive than the minimum federal standards described in 44 CFR. Please contact the local community's floodplain manager for more information on local floodplain management building requirements. The City of Los Angeles floodplain manager can be reached by calling Gary Moore, City Engineer, at (213) 485-4935. The Los Angeles County floodplain manager can be reached by calling George De La O, Senior Civil Engineer, at (626) 458-7155.

If you have any questions or concerns, please do not hesitate to call Cynthia McKenzie of the Mitigation staff at (510) 627-7190.

Sincerely,

for Gregor Blackburn

Responses to Comments from the U.S. Department of Homeland Security – FEMA, Blackburn, Gregor

Response to Comment R-AF1-1

Metro has reviewed the applicable Flood Insurance Rate Maps. No part of the proposed project would be located within a riverline floodplain, regulatory floodway, or coastal high hazard area. No project activities would change any existing special flood hazard area. This is documented in Section 4.10, Water Resources, of the Draft EIS/EIR and this Final EIS/EIR, and additional detail is provided in Appendix V, Water Resources Technical Memorandum. The above-referenced section and appendix of this EIS/EIR also include analysis based on local City of Los Angeles requirements.

Subject: Re: Metro Regional Connector Update

Hi Ann,

Here are the review comments from Bureau of Engineering:

1) For Article 2.3.6.2 Route Configuration, 5th paragraph, Is the City (CLA and LADOT) agrees to eliminate the north-south traffic along Hewitt Street and 1st Street Intersection? The Hewitt Street and 1st Street intersection was designed and constructed, during the Eastside LRT Project, to accommodate the north-south traffic along Hewitt Street for the future Mangrove property development. This elimination is not accepted. We need to discuss this ASAP. 1

2) For Article 4.18.2.5.1 Cut and Cover Construction, please contact Bureau of Sanitation for proper water (potable, groundwater, etc.) discharges into the City sewer and/or stormdrain systems. There will be a sewer service charge for discharging water into the City sewer system. Proper water treatment is needed before the water can be discharged into the City stormdrain system. 2

Thx.

Responses to Comments from the City of Los Angeles – Bureau of Engineering, Tran, Curtis

Response to Comment R-AL1-1

Comment noted. This elimination of through north-south traffic movement at the intersection of 1st and Hewitt Streets was included in Sections 2.3.6.2 and impacts associated with the elimination of the through north-south traffic movement was discussed in Section 3.3.5.2.2 of the Draft EIS/EIR and this Final EIS/EIR. The intersection is not projected to have a significant negative change in Level of Significance (LOS measured in seconds of delay) when compared to the No Build Alternative conditions. Therefore, no significant adverse impacts were identified. As indicated in Section 2.3.6.2 of the Draft EIS/EIR and this Final EIS/EIR, automobile access to the Mangrove property would continue to be available from Temple and 1st Streets. Metro has coordinated with the City of Los Angeles, including the Los Angeles Department of Transportation (LADOT), throughout the environmental and design process for this project. Metro will continue to coordinate with the City of Los Angeles, including LADOT, regarding intersection modifications throughout the project process.

Response to Comment R-AL1-2

Metro has been in coordination and will continue to coordinate with the Bureau of Sanitation, refer to comment letter R-AL3. Metro will obtain the required permits from the Bureau of Sanitation for discharges into the drainage and sewer systems as indicated in Section 4.22 of the Draft EIS/EIR and this Final EIS/EIR. As indicated in Section 4.10.3.5 of the Draft EIS/EIR and this Final EIS/EIR, there would be a potential need for dewatering if groundwater is encountered during construction activities. In order to comply with water discharge requirements, a dewatering permit would be obtained from the Los Angeles Regional Quality Control Board and proper water treatment would be performed before water is discharged, as indicated in Sections 4.10.3.3 and 4.10.3.5 of the Draft EIS/EIR and this Final EIS/EIR.

Subject: Comments on Regional Connector Supplemental EA

Hi Ann,

LADOT acknowledges receipt of the **Supplemental EA** for the Regional Connector and has the following comments.

1. Section 2.3.6.2 - Mitigation measures will need to be developed for alternate access to the Mangrove development site if the Hewitt Street access driveway will be closed or limited as proposed. 1

2. Chapter 2, Page 24 (Revision from Metro) states: *"Permanent roadway and lane reconfigurations would also be needed around the proposed 2nd/Hope Street station and the proposed pedestrian walkway enhancement along Flower Street. At the 2nd /Hope Street station, the ramps between Flower and Hope Streets would be modified. All existing traffic movements would still be possible in this location under the LPA. Final lane configurations will be developed with LADOT."*) LADOT will continue to work with Metro to define a preferred roadway configuration for the 2nd/Hope Street intersection layout. 2

3. Chapter 2, Page 1 states: *An enhanced pedestrian walkway would be created along the west side of Flower Street from the 4th Street and Flower Street area to the existing 7th Street/Metro Center Station entrance at 7th and Flower Streets.* LADOT would like to work with Metro to ensure that roadway capacity along Flower St. is not negatively impacted and that the proposed pedestrian walkway meets all applicable City standards. 3

thanks,
Susan

Responses to Comments from the City of Los Angeles – Department of Transportation, Bok, Susan

Response to Comment R-AL2-1

As indicated in Section 2.3.6.2 of the Draft EIS/EIR and this Final EIS/EIR, access to the Mangrove property would continue to be available via Temple Street and the westbound lanes of 1st Street.

Response to Comment R-AL2-2

Metro looks forward to continuing working with the Los Angeles Department of Transportation (LADOT). Figure 2-12 of this Final EIS/EIR illustrates the proposed roadway configuration, which is discussed in Section 3.3.5.2.2 of this Final EIS/EIR.

Response to Comment R-AL2-3

Metro looks forward to continuing working with LADOT. The impacts of the lane reduction along Flower Street are examined in Section 3.3.5.2.2 of the Draft EIS/EIR and this Final EIS/EIR. Mitigation measures to address these impacts are included in Section 3.4 of the Draft EIS/EIR and have been incorporated into Section 3.4.2 and the Mitigation Monitoring and Reporting Program for the Locally Preferred Alternative (Chapter 8) of this Final EIS/EIR. The pedestrian walkway would meet applicable state and federal standards, as discussed in mitigation measure number SS-8 in the Mitigation Monitoring and Reporting Program.

1 Gateway Plaza, MS 99-22-2
Los Angeles, CA 90012

Dear Ms. Roybal Saltarelli:

Regional Connector Transit Corridor Project – Recirculated Draft EIR

This is in response to your letter requesting wastewater service information for the proposed project. The Bureau of Sanitation, Wastewater Engineering Services Division (WESD) has conducted a preliminary study of the existing sewer lines and gauges located within the vicinity of the proposed project location.

The City of Los Angeles sewer system consists of primary sewers (16-inches and larger in diameter) and secondary sewers (less than 16-inches in diameter). The secondary sewers service the property laterals and feed into the primary sewer lines. The primary sewers constitute the trunk, interceptor, and outfall portions of the system. These sewers ultimately convey the wastewater to the Hyperion Treatment Plant which has sufficient capacity for current and future development. 1

The majority of sewer lines within the proposed project area consist of secondary lines. The secondary reaches run along W 7th St, S Hill St, E Cesar E Chavez Ave, E Commercial St, and S Alameda St. The primary sewer reaches run along Flower St, E Cesar E Chavez Ave. and Alameda St near the 7th St/Metro Center, Union Square, and the Little Tokyo Stations, respectively. Gauging within the project area show relatively low flows which indicates the existing sewer system might be able to accommodate future discharges related to this project. Figure 1 shows the existing sewer lines and gauging locations along the alignment of the proposed project.

Currently, the project description lacks sufficient detail for us to conduct a detailed wastewater capacity analysis. Should the project descriptions change or more details

R-AL3

related to the construction dewatering flows become available, please continue to send us information so that we may determine if a sewer assessment is required in the future. 1 cont'd

If you have any questions, please call Kwasi Berko of my staff at (323) 342-1562.

Sincerely,

Ali Poosti, Acting Division Manager

Dear Mr. Cardoso,

Thank you for soliciting my department's input regarding the Regional Connector project. I am responding to you on behalf of our director, Cynthia Banks, to whom you sent the original request. While I can definitely see the benefits of implementing this project, it operates exclusively within the City of Los Angeles. As such, it would not be appropriate for us to provide an official endorsement, and instead I would defer our comments to the City of Los Angeles Department of Aging. 1

Again, your interest in our feedback on this ambitious project is greatly appreciated. If you have any questions, please contact me at (213) 738-4238 or rdonnelly@css.lacounty.gov.

Sincerely,

Roseann Donnelly/DK

Los Angeles County Metropolitan Transportation Authority
One Gateway Plaza
Los Angeles, CA 90012

Re: SCH#2009031043; CEQA Notice of Completion; Recirculated draft Environmental Impact Report (REIR) for the **"Regional Connector Transit Corridor Project"** located from Montclair to Santa Monica; Los Angeles County, California.

Dear Ms. Roybal Salterelli:

The Native American Heritage Commission (NAHC), the State of California 'Trustee Agency' for the protection and preservation of Native American cultural resources pursuant to California Public Resources Code §21070 and affirmed by the Third Appellate Court in the case of EPIC v. Johnson (1985: 170 Cal App. 3rd 604). The NAHC wishes to comment on the proposed project.

This letter includes state and federal statutes relating to Native American historic properties of religious and cultural significance to American Indian tribes and interested Native American individuals as 'consulting parties' under both state and federal law. State law also addresses the freedom of Native American Religious Expression in Public Resources Code §5097.9.

The California Environmental Quality Act (CEQA – CA Public Resources Code 21000-21177, amendments effective 3/18/2010) requires that any project that causes a substantial adverse change in the significance of an historical resource, that includes archaeological resources, is a 'significant effect' requiring the preparation of an Environmental Impact Report (EIR) per the CEQA Guidelines defines a significant impact on the environment as 'a substantial, or potentially substantial, adverse change in any of physical conditions within an area affected by the proposed project, including ...objects of historic or aesthetic significance." In order to comply with this provision, the lead agency is required to assess whether the project will have an adverse impact on these resources within the 'area of potential effect (APE), and if so, to mitigate that effect. The NAHC Sacred Lands File (SLF) search resulted as follows: **Native American cultural resources were identified** within one-half mile of some of the 'areas of potential effect (APEs) based on the USGS coordinates provided. Contact the Native American on the attached list for further information. Note: the absence of recorded Native American cultural resources does not preclude their existence. 1

The NAHC "Sacred Sites,' as defined by the Native American Heritage Commission and the California Legislature in California Public Resources Code §§5097.94(a) and 5097.96. Items in the NAHC Sacred Lands Inventory are confidential and exempt from the Public Records Act pursuant to California Government Code §6254 (r).

Early consultation with Native American tribes in your area is the best way to avoid unanticipated discoveries of cultural resources or burial sites once a project is underway.

Culturally affiliated tribes and individuals may have knowledge of the religious and cultural significance of the historic properties in the project area (e.g. APE). We strongly urge that you make contact with the list of Native American Contacts on the attached list of Native American contacts, to see if your proposed project might impact Native American cultural resources and to obtain their recommendations concerning the proposed project. Pursuant to CA Public Resources Code § 5097.95, the NAHC requests that the Native American consulting parties be provided pertinent project information. Consultation with Native American communities is also a matter of environmental justice as defined by California Government Code §65040.12(e). Pursuant to CA Public Resources Code §5097.95, the NAHC requests that pertinent project information be provided consulting tribal parties. The NAHC recommends *avoidance* as defined by CEQA Guidelines §15370(a) to pursuing a project that would damage or destroy Native American cultural resources and Section 2183.2 that requires documentation, data recovery of cultural resources. 1 cont'd

Furthermore, the NAHC is of the opinion that the current project remains under the jurisdiction of the statutes and regulations of the National Environmental Policy Act (e.g. NEPA; 42 U.S.C. 4321-43351). Consultation with tribes and interested Native American consulting parties, on the NAHC list, should be conducted in compliance with the requirements of federal NEPA and Section 106 and 4(f) of federal NHPA (16 U.S.C. 470 *et seq*), 36 CFR Part 800.3 (f) (2) & .5, the President's Council on Environmental Quality (CSQ, 42 U.S.C 4371 *et seq.* and NAGPRA (25 U.S.C. 3001-3013) as appropriate. The 1992 *Secretary of the Interiors Standards for the Treatment of Historic Properties* were revised so that they could be applied to all historic resource types included in the National Register of Historic Places and including cultural landscapes. Also, federal Executive Orders Nos. 11593 (preservation of cultural environment), 13175 (coordination & consultation) and 13007 (Sacred Sites) are helpful, supportive guides for Section 106 consultation. The aforementioned Secretary of the Interior's *Standards* include recommendations for all 'lead agencies' to consider the historic context of proposed projects and to "research" the cultural landscape that might include the 'area of potential effect.' 2

Confidentiality of "historic properties of religious and cultural significance" should also be considered as protected by California Government Code §6254(r) and may also be protected under Section 304 of he NHPA or at the Secretary of the Interior discretion if not eligible for listing on the National Register of Historic Places. The Secretary may also be advised by the federal Indian Religious Freedom Act (cf. 42 U.S.C., 1996) in issuing a decision on whether or not to disclose items of religious and/or cultural significance identified in or near the APEs and possibility threatened by proposed project activity. 3

Furthermore, Public Resources Code Section 5097.98, California Government Code §27491 and Health & Safety Code Section 7050.5 provide for provisions for accidentally discovered archeological resources during construction and mandate the processes to be followed in the event of an accidental discovery of any human remains in a project location other than a 'dedicated cemetery'. 4

To be effective, consultation on specific projects must be the result of an ongoing relationship between Native American tribes and lead agencies, project proponents and their contractors, in the opinion of the NAHC. Regarding tribal consultation, a relationship built around regular meetings and informal involvement with local tribes will lead to more qualitative consultation tribal input on specific projects. 5

If you have any questions about this response to your request, please do not hesitate to contact me at (916) 653-6251.

Sincerely,

Dave Singleton
Program Analyst

R-AS1

Responses to Comments from the State of California Native American Heritage Commission, Singleton, Dave

Response to Comment R-AS1-1

Thank you for the letter. The Supplemental EA/Recirculated Draft EIR Sections did not include information concerning archaeological/tribal resources or consultation with tribes as these resources would not be impacted beyond those impacts already described in the Draft EIS/EIR. The Draft EIS/EIR and this Final EIS/EIR document the early consultation with the individuals and groups that were previously identified by the Native American Heritage Commission (NAHC). As part of the Draft EIS/EIR and preparation of the project Memorandum of Agreement, consultation and coordination was conducted with the NAHC to identify Native American cultural resources in the project area and a list of appropriate Native American contacts for the project. Correspondence was also sent to the Native American tribes identified by the NAHC inviting comments on the project Memorandum of Agreement. In addition, as part of the EIS/EIR, notices were sent to the NAHC soliciting input on the project during the environmental review process. The record of these consultations is summarized in Section 4.12, Historic Resources, of the Draft EIS/EIR and this Final EIS/EIR and is described more specifically in Appendix Y, Cultural Resources - Archaeology (Updated). The Federal Transit Administration and Metro distributed the EIS/EIR, applicable Technical Memoranda, and the project Memorandum of Agreement to interested individuals and groups. No additional comments from interested tribal members and groups have been received to date. All of the cited relevant regulations and laws have been complied with as documented in this Final EIS/EIR including relevant appendices. Metro will continue to coordinate and consult with the NAHC, as appropriate.

Re: Regional Connector Transit Corridor Project
IGR#110738/CS
Vic: LA-101-0.6, SCH# 2009031043

Dear Ms. Roybal Saltarelli

Thank you for including the California Department of Transportation (Caltrans) in the environmental review process for the above mentioned project. Based on the information received we have the following comments:

The proposed LRT system would provide direct service from Pasadena to Long Beach and from East Los Angeles to Santa Monica via the Regional Connector Transit Corridor subway. However, if the headways for each of the LRT lines were lengthened as part of the project, then this would result in reduced overall service to transit patrons. An alternative system would be to have a trunk line as originally envisioned, which would link Pasadena to Long Beach. The Gold Line to East Los Angeles and the Expo Line to Santa Monica would be stub lines. With a trunk line system, only the trunk line would use the Regional Connector Transit Corridor with existing or improved headways. The stub lines would also operate with existing headways but would require transfers at respective transit stations. 1

The Regional Connector Transit Corridor Project would directly link the 7th Street/Metro Center Station (Metro Blue Line terminus and Metro Expo Line Terminus) to the Metro Gold Line, near Little Tokyo/Arts District Station. The fully underground Light Rail Transit (LRT) alternative was designated as the Locally Preferred Alternative (LPA). 2

As a result of the construction tunnel boring activity, the excavation material would require transport to an off-site location. We request that construction-related truck trips on State highways be limited to off-peak commute hours. We also request that the contractor avoid bunching or platooning of truck trips on mainline freeways, on freeway on/off-ramps and at freeway ramp intersections. Transport of over-size or over-weight construction equipment on State highways will require a Caltrans Transportation Permit. 3

If you have any questions regarding these comments, you may contact Carl Shiigi, project coordinator at (213) 897-1726. Please refer to our internal record number 110738/CS.

Sincerely,

DIANNA WATSON
IGR/CEQA Program Manager
Caltrans, District 7

cc: Scott Morgan, State Clearinghouse

R-AS2

Responses to Comments from the State of California - Department of Transportation, District 7, Watson, Dianna

Response to Comment R-AS2-1

The proposed headways on the light rail system with the Regional Connector in place would be every five minutes on the North-South Line and every five minutes on the East-West Line, as shown in Table 2-1 of the Draft EIS/EIR and this Final EIS/EIR. This would match or improve the existing headways on the Metro Blue, Gold, and Expo Lines. One primary purpose of the Regional Connector is to make the transit system more convenient by reducing transfers. The North-South and East-West Lines proposed in Section 2.3.6.2 of the Draft EIS/EIR and this Final EIS/EIR would more effectively meet this goal than stub lines, and would still preserve or improve existing headways.

Response to Comment R-AS2-2

This information is correct.

Response to Comment R-AS2-3

As indicated in Section 3.4 of the Draft EIS/EIR, truck haul trips would be primarily scheduled along existing freight routes during off-peak hours. This has been incorporated into mitigation measure number AQ-15 of the Mitigation Monitoring and Reporting Program for the Locally Preferred Alternative (Chapter 8) of this Final EIS/EIR. Metro will continue to coordinate with Caltrans throughout the design and construction process and will acquire appropriate permits for construction of the Locally Preferred Alternative, which may include a Caltrans Transportation Permit if over-size or over-weight vehicles travel on state highways during construction as indicated in Section 4.22 of this Final EIS/EIR. Once construction lay down areas are identified, haul routes will be finalized and submitted to Caltrans for review. The platooning of truck trips on mainline freeways, freeway on/off-ramps, and freeway ramp intersections would be avoided. Refer to Section 4.22 of this Final EIS/EIR regarding coordination and approvals related to Caltrans.

Re: Supplemental EA/Recirculated Draft Environmental Impact Statement for the Regional Connector Transit Corridor Project

Dear Ms. Roybal Saltarelli:

Thank you for providing us with a copy of your Supplemental EA/Recirculated Draft Environmental Impact Statement (Supplemental EA/Recirculated Draft EIR Sections) for the Regional Connector Transit Corridor Project. The California Public Utilities Commission (CPUC or Commission) has been interacting with the Los Angeles County Metropolitan Transportation Authority (Metro) regarding the project since last year, most recently the CPUC had a meeting with the project's consultants on July 20th regarding the Regional Connector and grade crossings. 1

We do not have any additional written comments to those provided to your agency on October 20, 2010 on this project. 2

CPUC looks forward to continuing work with the Metro and your consultants in finalizing those items discussed at the July 20th meeting, processing the General Order 88-B for authorization to alter a couple of at-grade crossings and the completion of this important project.

Thank you very much for the opportunity to review and comment on your Supplemental EA/Recirculated Draft EIR Sections. Commission staff is available to meet with you and discuss our concerns. 3

We look forward to working with Metro on this project. Should you have any questions, please contact Jose Pereyra (213) 576 – 7083 or email at jfp@cpuc.ca.gov.

Sincerely,

Daren Gilbert, Manager
Rail Transit and Crossings Branch
Consumer Protection and Safety Division

R-AS3

Responses to Comments from the State of California Public Utilities Commission, Gilbert, Daren

Response to Comment R-AS3-1

Metro looks forward to continued coordination with the California Public Utilities Commission.

Response to Comment R-AS3-2

Responses to the prior written comments are included in Volume F-2 of this Final EIS/EIR as Responses to Comments AS3-1 through AS3-10.

Response to Comment R-AS3-3

Thank you for your comment. As discussed in Section 4.22 of this Final EIS/EIR, Metro will construct and operate the project according to the guidelines and oversight provided by the California Public Utilities Commission.

To: Regional Connector
Subject: Review - Supplemental EA/REcirculated Draft - Question

Dear Ms. Dolores Roybal Saltarelli:

My name is William Hong and an attorney here in Los Angeles. I'm also the son of one of the business owner "Green Bamboo" located at 136 S. Central Ave. Los Angeles (near Office Depot - parcel: 516101802). I was asked to take a look at the Supplemental Environmental Impact Draft that was online according to a notice that was sent by Metro.

Upon my initial review of the project (and as quite impressive it is) I did find that Metro is planning a "partial takings" of the land where the business is located. I also read that businesses will be "relocated." However, how exactly the relocation and/or mitigation will be completed is a bit vague for me. 1

Is it possible that I may meet with you to discuss exactly what the plans would entail regarding the businesses that are located on the above mentioned parcel? I would just like some clarification of the plans for the businesses. If it helps, we maintain a great relationship with the majority of the business owners that are currently operating in this parcel.

Thank you for your time and cooperation.

Best regards,

William Hong

Tel: 951.333.4644

R-BU1

Responses to Comments from Green Bamboo, Hong, William

Response to Comment R-BU1-1

For the Locally Preferred Alternative, some acquisitions are planned on the block bounded by 1st Street, Central Avenue, 2nd Street, and Alameda Street. These are outlined in the parcel table in Appendix R-1, Locally Preferred Alternative Drawings, of the Supplemental EA/Recirculated Draft EIR Sections and Appendix 1, Locally Preferred Alternative Drawings, of this Final EIS/EIR. The only businesses on this block that would be displaced are Señor Fish, the Spice Table, Weiland Brewery, and the adjacent parking lot. Green Bamboo is not part of these acquisitions, and would not be displaced or relocated. General information about relocation is provided in Section 4.2, Displacement and Relocation, of the Supplemental EA/Recirculated Draft EIR Sections and this Final EIS/EIR. Relocation assistance plans would be developed based on the specific needs of each business and ongoing coordination between Metro and the business owners. Any displacement and relocation would be conducted in accordance with the Uniform Relocation Assistance and Real Property Acquisition Policies Act of 1970. Since Green Bamboo would not be displaced, no relocation assistance would be necessary. Metro has discussed the project with a representative of Green Bamboo, and would be happy to schedule further meetings upon request. Metro shall develop a Construction Mitigation Program that includes protocol for community notification of construction activities including traffic control measures, schedule of activities, and duration of operations, with written communications to the community translated into appropriate languages.

Murthy

August 17, 2011

Mr. Arthur T. Leahy
Chief Executive Officer
Metropolitan Transportation Authority
One Gateway
25th Floor
Los Angeles, CA 90012

Dear Mr. Leahy:

Hines

We are the owners of Citigroup Center office building located at 444 South Flower Street on the northeast corner of Flower and 5th Streets in Downtown Los Angeles. I am writing this letter in regard to the upcoming construction of the Regional Connector Transit Corridor on Flower Street (the "Regional Connector") in Downtown Los Angeles and the impact of the construction to Citigroup Center.

As you may be aware, the most recent environmental impact report for the Regional Connector released July 22, 2011 suggests that the plaza area of Citigroup Center will be tagged with a "temporary construction easement" and be utilized as a staging area for construction of the Regional Connector. **This simply cannot happen, as the financial impact to Citigroup Center would be devastating!** We have recently spent over $6,000,000 to renovate the Plaza and upgrade elevators in order to assist with our effort in renewing approximately 650,000 rentable square feet of leases that are scheduled to expire in our building during 2012 and 2013. We hope to renew a majority of these tenants who view the newly renovated Plaza as a significant amenity of Citigroup Center. The construction of the Regional Connector occurring right outside of our front door will make the leasing effort challenging enough, and we certainly hope the Los Angeles County Metropolitan Transit Authority will be doing everything possible to minimize traffic delays on 5th and Flower Streets, but we cannot be expected to have the recently renovated Plaza area taken as a construction staging area as well. The taking of the Plaza could easily cost our project in excess of $100,000,000 in damages, including the time it will take to re-lease the space and the inherent added costs of replacing rather than renewing the existing tenants of Citigroup Center.

1

It seems to me that there are several alternative locations nearby that would not cause such economic hardship. I would appreciate hearing your thoughts with respect to eliminating this proposed "temporary construction easement". Please feel free to contact me at the number below.

Thank you very much.

Sincerely,

Colin P. Shepherd
Senior Vice President

R-BU2

Responses to Comments from the Hines, Shepherd, Colin

Response to Comment R-BU2-1

This proposed temporary construction easement was included in both the Supplemental EA/Recirculated Draft EIR Sections released on July 22, 2011, and the earlier Draft EIS/EIR released on September 3, 2010. As with all of the proposed easements and acquisitions described in these documents, Metro is working to minimize the amount of land needed. Metro analyzed all viable alternate locations for construction staging in the vicinity of Flower Street as part of the ongoing preliminary engineering process. As indicated in Section 4.2.1 of the Draft EIS/EIR, Supplemental EA/Recirculated Draft EIR Sections, and this Final EIS/EIR, Metro would provide compensation for the temporary construction easement consistent with the Uniform Relocation Assistance and Real Property Acquisition Policies Act of 1970. No businesses would be displaced as a result of this easement, and access to businesses would be maintained at all times. No tenants would be required to leave. Given that Metro would provide compensation for the temporary construction easement, no businesses would be displaced as a result of this easement, and access to businesses would be maintained at all times, impacts to this parcel with respect to displacement and relocation would be less than significant and no adverse effect would occur. Metro shall develop a Construction Mitigation Program that includes protocol for community notification of construction activities including traffic control measures, schedule of activities, and duration of operations, with written communications to the community translated into appropriate languages. Recent renovations to the plaza are noted. Following construction of the Regional Connector, Metro would restore the plaza to its pre-construction condition. Metro would also ensure that any physical damage resulting from construction is repaired.

Re: Regional Connector Transit Corridor Project: Comments Concerning Metro's Supplemental EA/Recirculated Draft EIR

Dear Ms. Saltarelli:

This firm represents the Los Angeles Times. The Los Angeles Times owns property that will be directly impacted by the Regional Connector Transit Corridor Project as proposed by the Metropolitan Transportation Authority. While the Los Angeles Times has regularly and consistently supported the efforts of Metro to develop new transit facilities throughout the Los Angeles region, it has real concerns about the impacts the Connector Project, and in particular one of its proposed stations, will have on the Los Angeles Times' property and on its operations. Because of those concerns, the Los Angeles Times supplements its earlier (October 18, 2010) comments regarding Metro's Draft Environmental Impact Report/Draft Environmental Impact Statement with these comments regarding Metro's Supplemental Environmental Assessment/Recirculated Draft Environmental Impact Report. (A copy of the October 18, 2010, comment letter is enclosed.) 1

Specifically, the Los Angeles Times operates from the "Square," its historic home. The Square consists of the block surrounded by West Second Street, South Spring Street, West First Street, and South Broadway, plus the portion of the adjoining block located south of Second Street between Broadway and Spring Street. The Los Angeles Times has its employee parking structure on the adjoining block and has a surface parking area on the land between the parking structure and the operations buildings. Beneath the surface parking is a 15,000-gallon, underground fuel tank, which supplies the Los Angeles Times' emergency generators, which, in turn, provide the Los Angeles Times with the ability to publish even in an extended power outage, for instance, following a disaster. 2

The Los Angeles Times understands that Metro's preferred alternative places a subway station on the Los Angeles Times' properties located at 201 South Spring Street and 200 and 208 South Broadway. These are the properties where the Los Angeles Times has its surface parking and 15,000-gallon tank. Metro's taking of these properties would have the effect of cutting the Los Angeles Times' campus into unconnected pieces. Yet, Metro's environmental documents, including the Supplemental EA, nowhere address the impacts to the Los Angeles Times' operations of having the Square bisected nor do the documents address how this severing will impact future use of the overall campus. For example, nowhere in Chapter 4, which deals with displacements and relocations and which has been revised in the Supplemental EA, is the Los Angeles Times even mentioned. Instead, as far as can be told from the environmental documents, 201 South Spring Street and 200 and 208 South Broadway make up a stand-alone parking lot with no relationship to the Los Angeles Times' operations.

If Metro thoroughly evaluates the impacts of taking the Los Angeles Times' properties, the Los Angeles Times believes Metro will decide that another location for the subway station will make more environmental and economic sense. Because of this, the Los Angeles Times asks that Metro specifically evaluate the impact of taking these properties in its accurate context: the midst of the Los Angeles Times' operations. For example, the environmental documents should discuss that by retaining the surface parking in the center of its campus the Los Angeles Times' property has maximum flexibility for both interim use and long-term growth and development. Currently, for instance, the Los Angeles Times receives substantial operating revenues by leasing portions of its property for movie shoots. A big part of what makes its property competitive for these shoots is the availability of the surface parking to accommodate the large trucks and other equipment necessary for a movie shoot. If Metro removes that surface parking, this will drive changes to the Los Angeles Times' movie leasing business and likely drive changes in how the Los Angeles Times must configure and use the overall campus. In other words, Metro's takings are likely to drive changes in land use for the Los Angeles Times' entire campus. These are potential environmental impacts that Metro needs to thoroughly evaluate. 3

Other impacts that the Los Angeles Times raised in its previous comment letter, but which are nowhere addressed in Metro's supplemental environmental document, include the impacts of removing the 15,000-gallon tank needed to power the emergency backup generating equipment for the entire Square and the impact of employee circulation if the parking structure is separated from the operations buildings. 4 5

These substantial impacts to the Los Angeles Times' campus and operations contrast to the minimal impacts that would be associated with a subway station located elsewhere on Second Street, for example between Main Street and Los Angeles Street. That location would involve only a partial take of a portion of the affected property and a permanent underground easement for another portion. Displacement of existing uses would thus be minimal, and there would be no disruption of access to adjoining properties. Simply put, in order to properly weigh these alternative 6

locations, Metro's environmental documents need to completely analyze the impacts to the Los Angeles Times' property. 6 cont'd

Thank you for the opportunity to provide these comments on the Supplemental EA. Please contact me if you have any questions.

Very truly yours,

K. Erik Friess

Re: Regional Connector Transit Corridor Project

Dear Ms. Saltarelli:

This firm represents the Tribune Company, owner and publisher of the Los Angeles Times, which occupies the property located on the block surrounded by West Second Street, South Spring Street, West First Street, and South Broadway (the "Tribune Property"). The Tribune Company also owns the property located south of Second Street between Broadway and Spring Street, which is currently used as a surface parking lot. The Los Angeles Times has regularly supported the efforts of the Metropolitan Transportation Authority ("Metro") to develop new transit facilities throughout the Los Angeles Region. Upon careful review of the Draft Environmental Impact Report/Draft Environmental Impact Statement ("DEIR/DEIS") for the Regional Connector Transit Corridor Project (the "Project"), the Tribune Company nevertheless has a number of concerns regarding potential impacts that the construction and operation of the Project may have with respect to the ongoing operations of the Los Angeles Times.

The proposed alignment of each of the light rail transit alternatives studied in the DEIR/DEIS is located along Second Street between Hope Street and Alameda Street and will therefore be immediately adjacent to the Tribune Property between Broadway and Spring Street. Under the At-Grade Emphasis LRT Alternative, trains would travel at grade along this portion of Second Street, which would be dedicated as a transit-only roadway providing only emergency vehicle access and local access to adjacent properties. Under the Underground Emphasis LRT Alternative, trains would travel underground below Second Street, but a station would be located either between Broadway and Spring Street or between Main Street and Los Angeles Street. Under the Fully Underground LRT Alternative, trains would similarly travel underground below Second Street, but there is no option to locate a station between Main Street and Los Angeles Street, and the proposed station would be located between Broadway and Spring Street, immediately adjacent to the Tribune Property.

Each of the three light rail transit alternatives analyzed in the DEIR/DEIS would adversely impact operations at the Tribune Property to varying degrees; however, the fewest adverse impacts would result from the Underground Emphasis LRT Alternative, which locates the proposed station on Second Street between Main Street and Los Angeles Street. The Tribune Company accordingly urges Metro to adopt the Underground Emphasis LRT Alternative with the proposed station to be located between Main Street and Los Angeles Street, or to adopt the Fully Underground LRT Alternative with the proposed station to be relocated to an alternate location.

The entrance into the main parking structure for the Tribune Property is located on Second Street. Two driveways into the surface parking lot located south of Second Street are also located on Second Street. A majority of the employees of the Los Angeles Times park in a parking facility south of Second Street and walk to the Tribune Property along Spring Street or Broadway. Construction of the Project will interfere with vehicular and pedestrian access to the Tribune Property under any of the Project Alternatives analyzed in the DEIR/DEIS.

Operation of the Project will also significantly interfere with pedestrian and vehicular access to the Tribune Property under the At-Grade Emphasis LRT Alternative, which proposes that Second Street be dedicated as a transit-only roadway with limited vehicular access. Vehicular restrictions along Second Street between Broadway and Spring Street will limit vehicular access to the parking structure and the surface parking lot that both have access from Second Street. Should this Alternative be implemented, it is imperative that full access be maintained to the Tribune Property during both construction and operation of the Project. Protection for pedestrians walking to and from the Tribune Property from south of Second Street along Broadway and Spring Street must also be maintained during both construction and operation of the Project should the At-Grade Emphasis LRT Alternative be implemented.

The impacts of the Underground Emphasis LRT Alternative and the Fully Underground LRT Alternative on the Tribune Property would be similar if a station were located on Second Street between Broadway and Spring Street. In addition to the adverse impacts on pedestrian and vehicular circulation associated with the construction of the At-Grade Emphasis LRT Alternative identified above, use of cut-and-cover techniques proposed in connection with the construction of the segment of the Project located between Broadway and Spring Street would completely disrupt all access to the Tribune Property and adjoining properties from Second Street during construction. Moreover, use of the sidewalks along Broadway and Spring Street both north and south of Second Street for construction staging will exacerbate adverse impacts on pedestrian safety and pedestrian access to the Tribune Property during construction.

In addition to adversely impacting access to the Tribune Property, development of the proposed station between Broadway and Spring Street will require the full take of the property located south of Second Street currently used by the Tribune Company for surface parking, as well as the full take of two adjoining properties located south of Second Street and east of Spring Street.

The Tribune Company derives parking and filming support revenues from its property located south of Spring Street and also maintains a 15,000 gallon underground fuel storage tank on the property to operate emergency backup generating equipment for the Tribune Property. Displacement of the fuel storage tank not only has the potential to disrupt operations, but few viable alternative locations exist for the relocation of the fuel storage tank. The DEIR/DEIS does not address the potential hazards associated with the risk of upset in connection with the displacement of the existing fuel storage tank or the potential cost or disruption to operations that would result from the displacement of the storage tank.

In contrast to the difficulties associated with constructing a station between Broadway and Spring Street, development of a station along Second Street between Main Street and Los Angeles Street would involve only a partial take of a portion of the affected property and a permanent underground easement for another portion. Displacement of existing uses would be minimal, and there would be no disruption of access to adjoining properties. If the construction of the proposed station between Main Street and Los Angeles Street is not feasible for other reasons, there are alternative locations for the proposed station along Second Street between Olive Street and Hill Street and between Hill Street and Broadway that would have less impact on surrounding uses. The DEIR/DEIS should therefore analyze additional alternatives for the location of the proposed station that would be less disruptive to existing businesses.

Thank you very much for the opportunity to provide these comments on the DEIR/DEIS. Please contact me if you have any questions or if I can provide further information with respect to this matter.

Very truly yours,

Patrick A. Perry

R-BU3

Responses to Comments from Allen Matkins Leck Gamble Mallory & Natsis LLP on behalf of the Los Angeles Times, Friess, K. Erik

Response to Comment R-BU3-1

Comment acknowledged. Metro has continued meeting with the Los Angeles Times throughout the EIS/EIR process. Metro received the referenced October 18, 2010 comment letter and has included written responses numbered BU32-1 through BU32-6 in Volume F-2 of this Final EIS/EIR.

Response to Comment R-BU3-2

Thank you for providing this information. Metro is aware of the underground fuel tank beneath the surface parking lot, and its importance to the operations of the LA Times. Metro would relocate the tank in place during construction to allow it to continue operating, as shown in drawing A-102 in Appendix R-1 of the Supplemental EA/Recirculated Draft EIR Sections. No significant impacts or adverse effects resulting from this relocation are anticipated.

Response to Comment R-BU3-3

As shown in Table 4.2-4 (and referenced in Section 4.2.3.5) of the Draft EIS/EIR and Table 4.2-5 (and referenced in Section 4.2.3.5) of this Final EIS/EIR, Metro proposes to acquire the properties at 201 South Spring Street and 200 and 208 South Broadway (Assessor's Parcel Numbers 5149-008-032, 5149-008-031, and 5149-008-030 respectively) as part of the Locally Preferred Alternative. The Tribune Company is identified as the owner of these parcels in Appendix II, Conceptual Drawings for Build Alternatives Analyzed in the Draft EIS/EIR, of the Draft EIS/EIR, Appendix R-1, Locally Preferred Alternative Drawings, of the Supplemental EA/Recirculated Draft EIR Sections, and Appendix 1, Locally Preferred Alternative Drawings, of this Final EIS/EIR. The impacts of these acquisitions, including inconvenience for users of the parking lot, were examined in more detail in Section 5.4.1.3 (and referenced in Section 5.5.1.3) of Appendix N, Displacement and Relocation Technical Memorandum, of the Draft EIS/EIR and this Final EIS/EIR, and determined not to be significant/adverse. Section 4.2.3 of the Draft EIS/EIR, Supplemental EA/Recirculated EIR Sections, and this Final EIS/EIR references Appendix N, Displacement and Relocation Technical Memorandum, of the Draft EIS/EIR and this Final EIS/EIR for additional analysis of proposed acquisitions where significant impacts or adverse effects would not occur.

Metro is aware of the existing parking lot and the fuel tank, and its importance to the operations of the LA Times. Metro would relocate the tank in place during construction to allow it to continue operating, as shown in drawing A-102 in Appendix R-1 of the Supplemental EA/Recirculated Draft EIR Sections and Appendix 1, Locally Preferred Alternative Drawings, of this Final EIS/EIR. No significant impacts or adverse effects resulting from this relocation are anticipated.

Metro proposes to convert the surface parking lot to a station entrance and plaza, which would enhance the pedestrian environment and allow easier traversal of the above-listed parcels than the existing fenced parking lot. This improved pedestrian space between the parking structure

and 2nd Street would enhance, rather than bisect, the connection between the Los Angeles Times' buildings.

As shown in Section 4.2.3 of the Draft EIS/EIR and Section 5.4.1.3 (and referenced in Section 5.5.1.3) of Appendix N, Displacement and Relocation Technical Memorandum, of the Draft EIS/EIR and this Final EIS/EIR, Metro has adequately evaluated and disclosed the impacts of acquiring these properties. After comparing these impacts with those of alternative station locations, Metro determined that the properties at 201 South Spring Street and 200 and 208 South Broadway would be the most environmentally and economically suitable location for the 2nd/Broadway station entrance and plaza. The interim use of the surface parking lot for movie shoots is noted. The property tax associated with parcels to be acquired and the potential for construction of the alternative to have substantial, adverse effects on businesses along the alignment was used to determine economic and fiscal impacts associated with the project. Refer to Section 4.14, Economic and Fiscal Impacts, of this Final EIS/EIR. Business compensation and assistance would be provided in compliance with the Uniform Relocation Assistance and Real Property Acquisition Policies Act of 1970. Alternate parking locations are available in the area, and the addition of a transit station to the area would likely cause some people to ride transit instead of driving, thus reducing the overall need for parking. No other land use changes on the Los Angeles Times' properties are proposed as part of the Regional Connector project and the conversion of the parking lot to transit use is not expected to change uses on any of the other Los Angeles Times parcels. Land use impacts are evaluated in Section 4.1, Land Use and Development, of the Draft EIS/EIR and this Final EIS/EIR.

Response to Comment R-BU3-4

Metro is aware of the fuel tank and its importance to the operations of the LA Times. Metro would relocate the tank in place during construction to allow it to continue operating, as shown in drawing A-102 in Appendix R-1 of the Supplemental EA/Recirculated Draft EIR Sections and Appendix 1, Locally Preferred Alternative Drawings, of this Final EIS/EIR. No significant impacts or adverse effects resulting from this relocation are anticipated.

Response to Comment R-BU3-5

The parking structure has exits onto both Spring Street and Broadway, and there are no legal crosswalks on 2nd Street between Spring Street and Broadway. As indicated in Chapter 3, Transportation Impacts and Mitigation, of the Draft EIS/EIR and this Final EIS/EIR, unavoidable adverse effects under NEPA and significant and unavoidable impacts under CEQA would occur to pedestrian circulation during construction even with incorporation of mitigation. Nevertheless, once construction has been completed, pedestrian circulation would still be possible across the proposed station plaza because the plaza would be open to public access. The plaza would likely be more easily traversed than the existing fenced parking lot, thus enhancing the pedestrian connection between the parking structure and 2nd Street. This would represent an improvement to the pedestrian environment. Once the new station has opened, some Los Angeles Times employees may choose to ride transit to work instead of driving, thus eliminating their need to walk beyond the station entrance to the parking structure.

Response to Comment R-BU3-6

Metro has adequately analyzed the potential impacts to the Los Angeles Times' properties. Metro evaluated the potential station location on 2nd Street between Main and Los Angeles Streets as part of the Underground Emphasis LRT Alternative in the Draft EIS/EIR, but found that this location would offer poor connections to the shopping district and proposed downtown streetcar project on Broadway. The Main/Los Angeles location would also be closer to the proposed station in Little Tokyo, and would result in uneven station spacing along 2nd Street. As shown in Section 4.2.3 of the Draft EIS/EIR and this Final EIS/EIR and Section 5.4.1.3 (and referenced in Section 5.5.1.3) of Appendix N, Displacement and Relocation Technical Memorandum, of the Draft EIS/EIR and this Final EIS/EIR, there would be no significant impacts/adverse effects associated with the displacement of the existing parking lot at 201 South Spring Street and 200 and 208 South Broadway. There are several other privately-operated parking lots and structures in the vicinity of these locations. Although loss of the current parking lot may cause an inconvenience for users, it would not represent a significant impact or adverse effect and the Regional Connector would provide new non-automobile access to the area, which would partially offset the parking demand in the area. Access to adjoining properties would be maintained at all times during construction.

Re: State Clearinghouse No. 2009031043
Los Angeles County Metropolitan Transportation Authority
Regional Connector Transit Corridor Project
Supplemental Environmental Assessment/Recirculated Sections of the Draft Environmental Impact Report

Dear Ms. Roybal Saltarelli and Mr. Tellis:

Thomas Properties Group ("TPG") is the real property owner and property manager of the properties located at 515-555 South Flower Street, referred to as the "City National Plaza and Towers" in the Supplemental Environmental Assessment/Recirculated Sections of the Draft Environmental Impact Report ("SEA/RSDEIR"), and 400 South Flower Street, referred to as the "J-2 Garage" (collectively, the "Adjacent Properties"). Both of the Adjacent Properties are immediately adjacent to the proposed locations of the Los Angeles County Metropolitan Transportation Authority ("LACMTA") Regional Connector Transit Corridor Project ("Regional Connector" or "Project").

LACMTA has solicited comments only on the revisions to the previously circulated Draft EIS/EIR included in the SEA/RSDEIR. However, it must also be recognized that the substantial revisions in the SEA/RSDEIR must be considered in context with the Draft EIS/EIR, if the impacts cannot be distinguished with a bright-line test. Consequently, pursuant to CEQA/NEPA,[1] the following comments are submitted on the Draft EIS/EIR and SEA/RSDEIR for consideration

1

[1] References to "CEQA" are to the California Environmental Quality Act, at California Public Resources Code, Sections 21000 et seq. References to the "CEQA Guidelines" are to Title 14 of the California Code of Regulations, Sections 15000 et seq. References to "NEPA" are to the federal National Environmental Policy Act, at Title 42 U.S.C. sections 4321 et seq.

TPG understands that the Regional Connector will be constructed, and that its path will follow Flower Street in immediate proximity to the Adjacent Properties. As a developer, owner, and property manager of predominantly sustainable, transit-oriented developments, TPG is an overall supporter of mass transit, and of the Regional Connector, specifically. However, TPG has a significant economic interest in ensuring that the construction impacts of the Regional Connector on emergency personnel and on the tenants, employees, patrons, and visitors of the Adjacent Properties are avoided or at least minimized to the greatest extent possible. 2

TPG understands that the Fully Underground LRT Alternative described in the Draft EIR/EIS has now been selected as the Locally Preferred Alternative ("LPA"). We also understand that the LPA has been revised to eliminate the station proposed for Flower/5th/4th Streets due to lack of funding. TPG asks that this station continue to be included in the Regional Connector and in future studies, and not be eliminated at this time. A station in this location would provide an important and needed connection at the center of the Financial District and adjacent to the Central Library. The area around 5th Street is the major hub of commercial and financial services in downtown Los Angeles and should be served by the Regional Connector for all transit lines. Having no stations between 2nd Street and 7th Street (a distance of ¾ of a mile) will reduce the convenience and hence revenue-generating abilities of the entire rail system. In addition, as we note below, the EIS/EIR should continue to include a full discussion of the environmental impacts of this station, since the SEA/RSDEIR acknowledges that it is a reasonably foreseeable future development. 3

The SEA/RSDEIR depicts a proposed extensive and intrusive Temporary Construction Easement on the west and east sides of Flower Street in front of the Adjacent Properties, and on 5th Street north of the City National Plaza and Towers, in Figure 2-15. Like the Draft EIS/EIR, the SEA/RSDEIR proposes to use the easement for construction staging.

TPG met with representatives from the LACMTA and AECOM on August 22, 2011 to discuss our concerns about the Temporary Construction Easement shown in the SEA/RSDEIR. At that meeting, LACMTA representatives assured TPG that the scope and purpose of the Temporary Construction Easement would be sharply curtailed and narrowly defined, compared to the drawings included in the SEA/RSDEIR, describing an easement that would only extend a few feet inside of the property line and would be only as deep onto our property off the property line as is necessary to install any required K-rails and vehicular and pedestrian ramps (as discussed below). At that meeting, LACMTA presented a revised set of drawings showing a proposed revised Temporary Construction Easement ("Potential Revised Temporary Construction Easement") across the Adjacent Properties. A set of these revised drawings was not left with us. We were told that the proposed revised plans are not final and have not been distributed to the public. 4

In our discussion, LACMTA representatives made it clear that the sole purposes of any Temporary Construction Easement over our Adjacent Properties, including the Proposed Revised Temporary Construction Easement, would be (i) to allow the contractor to install and remove K-rails and fences that are necessary to separate pedestrians from the street where work is being done, with such K-rails and fences to be located along our property line, immediately to the east of the existing retail escalator structures along our easterly property line on Flower Street, and (ii) to install and remove temporary pedestrian and driveway ramping, if any, that may be necessary to transition between the elevation of the construction cut and cover plates on Flower Street and the elevation of the existing driveways and sidewalks along Flower Street between Fourth and Sixth Streets.

4 cont'd

LACMTA representatives indicated that the cut and cover construction could be done using one of two different methods. One method would have the steel plates installed at existing street level (which no grade differential). The other method would have steel plates installed higher than existing street level, resulting in a grade differential that may be as much as 18 to 24 inches between the steel plates and the existing driveway and sidewalk elevations.

As expressed in the meeting, TPG has serious concerns about any grade differential between the sidewalks and the steel plates installed in the street, and specifically the height of the proposed grade differential. Any such grade differential will have serious impacts on safe and convenient access for vehicles into and out of the Adjacent Properties' driveways, and for pedestrians who access the Adjacent Properties from buses, taxis and shuttles in the drop off area on the west side of Flower Street in front of City National Plaza, from the mid-block cross-walk in front of City National Plaza, at each corner of the City National Plaza property, and on the east side of Flower Street in front of the J-2 Garage.

The size and safety of the temporary ramping that would be required to overcome as much as a 24 inch grade differential along Flower Street is of great concern to TPG. It is questionable whether such ramping would be safe for our visitors and tenants to navigate and whether it could comply with the Americans with Disabilities Act of 1990 (Title 42 U.S.C. §§ 12101 et seq.; "ADA") and other disabled access laws, and whether it can provide access for emergency vehicles. TPG also expressed our concerns about the impact of any grade differential on the use of the mid-block pedestrian cross-walk and the safety and efficiency of bus loading and unloading in the bus drop off area, with the resulting congestion that will result along Flower Street, past the City National Plaza and Towers underground garage entrance ramp, if buses are unable to efficiently drop off and pick up passengers. In particular, there does not appear to be sufficient area between the garage entrance ramp and the bus drop off area for efficient use.

5

We understand that LACMTA is speaking with LADOT about these and other traffic concerns that would arise from the cut and cover construction along Flower Street, including possible impairment of the sight lines for cars accessing and departing from the City National Plaza and Towers underground garage on the Flower Street ramps and the safety of pedestrians. LACMTA should discuss with LADOT the need for the Adjacent Properties to have continuous and uninterrupted ingress and egress for vehicles from and onto Flower Street and for pedestrians to have such access across the mid-block cross-walk and over our plazas. TPG has experienced severe congestion in the underground parking garage at City National Plaza when cars were unable to exit onto Flower Street in the past year due to one or more lanes of Flower Street being blocked south of the complex by road work, and may experience similar problems if there were serious congestion on Flower Street as a result of the temporary and permanent effects of the Project. Not only is such congestion an inconvenience to our tenants and visitors, it also creates serious operating and safety risks in the garage (with cars unable to move on the garage ramps, resulting in blocking of a key exit from the property). 6

In our August 22, 2011 meeting with LACMTA representatives, TPG emphasized that at all times pedestrians must have continuous and unimpeded access to and from our property across each corner on Flower Street, across the mid-block cross-walk, to and from the bus drop off area on Flower Street, to and from the 5th Street Pedestrian Bridge, and into and out of each of the retail escalators that run from our B Level Retail Shops and Restaurants to Flower Street. 7

TPG mentioned that we have been in communication with the City Battalion Fire Chief Michael Thomas regarding the need to protect the exit routes from each tower across our plaza areas and to safe zones at least 300 feet from the buildings. LACMTA construction cannot be allowed to impair or impede this safety requirement. LACMTA representatives assured our team that MTA understood and shared this goal of keeping access to our Adjacent Properties open and unimpeded. 8

LACMTA clarified at our August 22, 2011 meeting that the cut and cover construction could be done in two different ways. We understand from that meeting that the Project could be constructed with steel plates installed in Flower Street at existing grade level, so that there would be no separation or grade differential between the existing Flower Street and the steel plates and, therefore, no need for ramps for vehicles or pedestrians along the Adjacent Properties. TPG strongly prefers this method of cut and cover construction for the Project along the Adjacent Properties if the work is not done by tunnel boring. 9

TPG also mentioned in our August 22. 2011 meeting that our restaurants are open on evenings and weekends and that continuous access will be needed during those hours for vehicles to park for the restaurants. We also have a fitness club that operates 24 hours per day and restaurants on the B Level of the City National Plaza and Towers that operate during late hours. LACMTA representatives mentioned that work on the Project would be done on weekends and after normal business hours, but our restaurants and other businesses that operate 24 hours or after normal business hours will need special protection for access and noise abatement even during those hours. 10

As you know, City National Plaza is unique in that it has almost 200,000 square feet of underground retail and restaurant tenants and other users on B Level. This space is located adjacent to where the subway tunneling will be done under Flower Street. Mitigation steps should be taken to minimize noise and vibration during the Regional Connector work that could be heard or felt on the B Level. While other properties on Flower Street may not be as affected by subterranean work under Flower Street, our tenants on B Level could definitely be adversely impacted by such noise and vibration. 11

Additionally, based on the meeting, LACMTA is now considering relocating the pocket track away from Flower Street between 4th and 6th Streets, thereby reducing the tracks to two and narrowing the tunnels along the Adjacent Properties, which moves the tunnels farther away from the existing improvements. TPG agrees with this approach and asks that LACMTA limit the tracks under Flower Street to two and narrow the size of the tunnels between 4th and 6th Streets so that the work under Flower Street is moved as far as possible away from the underground structures under the Adjacent Properties. We may have additional concerns and comments if LACMTA decides to build a pocket track under Flower Street in the area of the Adjacent Properties. 12

Our comments concerning the impacts of the Project reflect our understanding that the scope and purpose of the proposed Potential Revised Temporary Construction Easement described in this letter, and the relocation of the pocket track, are consistent with LACMTA's intent. If LACTMA's intent is not as described in this letter, TPG requests that LACMTA immediately inform us, so we can discuss this further before the Final EIS/EIR s completed.

TPG has every confidence in the good faith of LACMTA's representations at our August 22, 2011 meeting regarding its current plans (i) to limit the scope and purpose of the Temporary Construction Easement to be consistent with the scope and limited purposes that were described for the Potential Revised Temporary Construction Easement presented at the meeting with LACMTA representatives on August 22, 2011, as described above, and (ii) to redesign the subway tunnels to have only two tracks along the Adjacent Properties, with no pocket track in that area. Even so, this letter contains our comments 13

on the SEA/RSDEIR and the Draft EIS/EIR (collectively, the "Circulated Documents"), as well as on the Potential Revised Temporary Construction Easement and the other issues raised at our August 22, 2011 meeting, in order to retain all of TPG's legal rights. 13 cont'd

In light of the proximity of, and potential impacts to, the Adjacent Properties, TPG requests the following be addressed with respect to the construction and operation of the Regional Connector, as more fully explained, below:

- The feasibility of constructing the Regional Connector by the tunnel boring method under Flower Street to minimize any surface impacts on Flower Street, 5th Street and 6th Street, which are all highly congested and provide critical circulation and access for thousands of workers, visitors and transit riders, as well as emergency personnel who need to access the Adjacent Properties. 14

- The adverse vehicular access and circulation impacts that would result to the Adjacent Properties during construction using the cut and cover construction technique, including, without limitation, any barriers or grade differentials created by work on Flower Street, 5th Street and 6th Street. 15

- The adverse impacts to pedestrians, many of whom are employees and visitors to the City National Plaza and Towers, that would result from the cut and cover construction activities, including, without limitation, any barriers or grade differentials created by the work on Flower Street, 5th Street and 6th Street. 16

- The adverse impacts to the retail and restaurant tenants in the City National Plaza and Towers from any interruption to access to that property during construction. 17

- The adverse impacts to downtown traffic flow due to the interference with the Flower Street stop for transit, shuttle and other modes of transportation between 4th and 6th Streets, including, without limitation, the size or ease of access to those stops. 18

- The adverse impacts that construction and tunneling under Flower Street could have on the B Level and the subterranean garage at the City National Plaza and Towers and the subterranean portion of the J-2 Garage. 19

- The potentially significant impacts that construction noise and vibration levels may have on TPG's tenants, including, without limitation, the subterranean B Level tenants. General mitigation measures have been identified in the Draft EIS/EIR; 20

however, no mitigation measure has been specifically identified in the SEA/RSDEIR despite TPG's prior comments to address the substantial change in ambient noise and vibration levels in the immediate vicinity of the Adjacent Properties. 20 cont'd

- The significant traffic impacts identified in the Draft EIS/EIR (decreased LOS), and potentially exacerbated by the revisions to the LPA described but not analyzed in the SEA/RSDEIR, that would result from permanently reducing the number of traffic lanes in the immediate vicinity of the Adjacent Properties on Flower Street. 21

The Draft EIS/EIR and the SEA/RSDEIR make the general and unsupported statement that access to the Adjacent Properties would be maintained at all times. To the contrary, the Temporary Construction Easement depicted in the SEA/RSDEIR would block access to the Adjacent Properties from Flower Street and 5th Street for both vehicles and pedestrians, which would create significant and unavoidable impacts on traffic, access and safety.

However, during the August 22, 2011 meeting with TPG, LACMTA expressed its intent that vehicular and pedestrian access to the Adjacent Properties will not be blocked along Flower Street, including the mid-block cross-walk, or 5th Street for any period during the business hours of City National Plaza and its businesses (which are generally from 6:00 am through midnight on business days and from 11:00 am through midnight on weekends, subject to the 24 hour fitness club and late restaurant hours of some tenants), and that the construction will not be allowed to cause any adverse impacts to the safety of TPG's tenants and visitors. We request that appropriate mitigation measures be addressed in consultation with TPG to assure that such vehicular and pedestrian access is assured. Any such blockage would potentially cause severe and unacceptable safety and hazards impacts, not to mention millions of dollars of economic damages, to TPG and our tenants. 22

TPG's concerns over the potential impacts to the Adjacent Properties from the Temporary Construction Easement described in the Draft EIS/EIR and the SEA/RSDEIR are heightened by the almost total lack of information in the Draft EIS/EIR and the SEA/RSDEIR regarding the purposes and use of the Temporary Construction Easement. CEQA, including, e.g., Sections 21001 through 21003.1, and Sections 15124 through 15126.6 of the CEQA Guidelines, requires that any facet of a project which has so many potential adverse impacts be clearly defined and that the environmental analysis include mitigation measures to address the significant impacts. The Draft EIS/EIR and SEA/RSDEIR, in contrast, do little more than provide a dotted-line representation of the extent of the Temporary Construction Easement and promise, without substantiation, that it will be made "as compatible as possible" to the Adjacent Properties. This general description falls far short of CEQA's requirements. There is no description of what activities will be conducted on the easement area, what sorts of equipment will be involved in 23

the use of the easement, whether there be any access through the easement or whether there will be barricades. (See, e.g., SEA/RSDEIR Chap. 4, §§ 4.2.3.5 et seq.) Further, the Circulated Documents do not indicate what will happen to the garage ingress and egress points, or the bus, shuttle and taxi and other car drop off areas, or the pedestrian overpass over 5th Street, or whether access will be provided to and from the J-2 Garage, which is a major source of tenant and visitor parking for the City National Plaza and Towers. The Draft EIS/EIR and the SEA/RSDEIR fail to provide this information, as well as what other mitigation measures could be included in the Project to address this myriad of impacts and what their effects would be.

23 cont'd

24

CEQA simply does not permit a project to brush off such significant considerations with a "we will deal with it when we get there" approach. (See, e.g., *Communities for a Better Environment v. City of Richmond* (2010) 184 Cal.App.4th 70, 92 [When setting aside a city's promise to adopt a greenhouse gas reduction plan in the future to mitigate a project's significant impacts, the Court of Appeal noted that"[n]umerous cases illustrate that reliance on tentative plans for future mitigation after completion of the CEQA process significantly undermines CEQA's goals of full disclosure and informed decisionmaking"]; *San Joaquin Raptor Rescue Ctr. v. County of Merced* (2007) 149 Cal.App.4th 645, 670 [EIR found defective for failing to analyze impacts, provide mitigation and analyze the impacts of mitigation; if "[t]he success or failure of mitigation efforts … may largely depend on management plans that have not yet been formulated, and have not been subject to analysis and review within the EIR," the EIR is defective]..) The failure to identify the significant impacts of the Temporary Construction Easement, to provide feasible mitigation for such impacts, and to evaluate alternatives, renders the Draft EIS/EIR and SEA/RSDEIR fatally flawed. (See, e.g., *Sierra Club v. State Board of Forestry* (1994) 7 Cal.4th 1215, 1233 ["CEQA compels government first to identify the environmental effects of projects, and then to mitigate those adverse effects through the imposition of feasible mitigation measures or through the selection of feasible alternatives"]; *Mountain Lion Foundation v. Fish & Game Commission* (1997) 165 Cal.4th 105, 134 [CEQA contains a substantive mandate not to approve a project with significant environmental effects if there are feasible mitigation measures or alternatives that can substantially lessen or avoid those effects].)

25

As indicated above, TPG believes in the good faith of the LACMTA team at our August 22, 2011 discussion in delineating and explaining the true scope and purpose of the Potential Revised Temporary Construction Easement, which are more limited than as disclosed in the Circulated Documents. However, since all we can officially comment on are the Circulated Documents, TPG must go on record with our objections and concerns based on those documents.

26

1. Vehicular access to the Adjacent Properties.

The City National Plaza and Towers has three vehicular access points: one from 5th Street just west of Flower Street, one near the main bus stop south of 5th Street on the west side of Flower Street and a loading dock access ramp from 5th Street adjacent to the parking garage ramp. The egress from the underground parking structure to the surface includes a one-lane exit-only ramp on the north side of 6th Street, west of Flower Street, and a similar ramp exiting to Flower Street just north of 6th Street. Because both exit ramps angle onto one-way streets leading away from the City National Plaza and Towers (6th Street is restricted to eastbound traffic, and Flower Street is restricted to southbound traffic) neither exit (leaving aside other constraints) can be converted into suitable ingress points during construction. All of these ingress and egress points must be preserved at all times and cannot be impacted by the Temporary Construction Easement. Any interruption in access to the underground parking structure would severely impact the safety and convenience of the office and retail tenants, visitors, vendors, and customers at City National Plaza and Towers, and the safety of the structures, would result in significant economic impacts to both our tenants and to City National Plaza and Towers, and could result in the exercise of remedies by our tenants against TPG based on the inability to access and use the parking and the buildings. 27

The main vehicular access points from Flower Street to the J-2 Garage, a main supplemental source for tenant parking, would also be impacted by the Temporary Construction Easement on the east side of Flower Street between 4th and 5th Streets. Again, this access point to the J-2 Garage must be preserved and kept open at all times for use by the tenants, visitors and customers of the City National Plaza and Towers, which access is required by the applicable leases. The bulk of the parking for City National Plaza and Towers is accommodated at the J-2 Garage and it is as important to the operation of the property as our on-site underground parking structure. 28

2. Pedestrian access to the Adjacent Properties.

Tower Access. Due to security concerns, both of the City National Plaza office towers can only be accessed from the inward facing doors in front of the security desks. Neither the Temporary Construction Easement, nor the Potential Revised Temporary Construction Easement can interfere with pedestrian access across the plaza to the front doors at each tower. In addition, such access must be compliant with the ADA for impaired or disabled persons. There can be no obstructions or ramps that would not permit continued ready access for impaired or disabled pedestrians to the buildings in compliance with the ADA. Most of the pedestrians who visit the property access it from the east, crossing Flower Street at each corner and at the mid-block crosswalk. All of these access points must be kept open and readily accessible at all times for all pedestrians, in compliance with the ADA. 29

Access to Retail Tenants. According to Figure 2-15 in the SEA/RSDEIR, the exterior pedestrian access escalators to the underground retail area on B Level of the City National Plaza and Towers would be impacted by the Temporary Construction Easement. This retail area requires continuous access from the escalators at each end of the block along Flower Street in order for visitors and customers from the area to access the businesses on B Level. Any interference with such access would adversely affect the retail establishments in an already depressed economy, and limit the restaurant/food options for workers and visitors in the financial district. Direct access to this retail area is necessary at all times, which is not assured by the changes in the SEA/RSDEIR. 30

Access to J-2 Garage and beyond. The SEA/RSDEIR does not reveal how the Temporary Construction Easement will affect, if at all, the existing escalator and elevated pedestrian walkway, which crosses 5th Street between the City National Plaza and Towers and the Bonaventure Hotel complex. Figure 2-15 in the SEA/RSDEIR indicates that the escalator and walkway over 5th Street could be impacted. The elevated pedestrian accesses between J-2 Garage and the Bonaventure Hotel Complex and from the City National Plaza and Towers across 5th Street are critical to the safety of the pedestrians who move between these buildings and facilities, many of whom are tenants and visitors to the City National Plaza and Towers. 31

If the existing overpass between the Bonaventure Hotel Complex and the J-2 Garage is obstructed, the current access to properties east of Flower Street will be impaired. Currently, this overpass bears a significant amount of pedestrian traffic that is kept off the sidewalks and out of the cross-walks, resulting in both pedestrian and traffic benefits that would be lost during construction of the Regional Connector if the bridge and walkways are obstructed or impaired. The Draft EIS/EIR concluded that there were no significant problems with pedestrian traffic capacity in the area, but failed to appreciate the importance of the overpass network in creating that pedestrian flow.

3. Safety of the tenants, visitors, vendors and customers of the City National Plaza and Towers.

As TPG has indicated, pedestrian access to and from the City National Plaza and Towers from the east must be kept open at all times, and fire/life safety concerns dictate that the fire/emergency exits on the east sides of the office towers be unobstructed at all times. There can be no interference with fire access through the fire doors on the east side of the buildings. If those exits were ever blocked in connection with the Project, the safety of our tenants and visitors would be imperiled, with inadequate means of exiting during an emergency, and leaving disabled and infirm persons no means of exit. Given the thousands of people who occupy the City National Plaza and Towers, and the high state of panic that fires and other emergencies create, any interference with use of those exits and unimpeded access from the doors 32

across the plaza areas adjacent to each set of exit doors for evacuation purposes, and for emergency personnel access to the office towers, creates a significant and unsupportable safety hazard, and is a recipe for a major disaster. In addition, TPG is concerned that the Temporary Construction Easement, as described in the Draft EIS/EIR and the SEA/RSDEIR, and even as described in the meeting with LACMTA representatives, may impair access by fire department, ambulance and other medical and emergency services to the City National Plaza and Towers and subterranean levels by virtue of the construction activities on Flower Street, together with the existing grade separation between Figueroa Street and the plaza level. The Draft EIS/EIR and SEA/RSDEIR provide no information on how fire trucks and other emergency vehicles would reach the buildings if access from the east is impaired and only the limited western access is available. 32 cont'd 33

Moreover, as noted above, the Temporary Construction Easement could also impair the use of the exterior escalators between the street level and the retail tenants on the B level of the Towers, which would interfere with an important exit route from the retail area in the event of an emergency, and which is particularly important in view of the fact that this retail area sits two levels below the surface. 34

4. Bus, shuttle and other transit modes, affecting the entire downtown traffic flow.

The bus stops on Flower Street just south of 5th Street adjacent to the City National Plaza and Towers are the terminus or a main stop for a large number of bus lines in Los Angeles and surrounding areas, including the San Gabriel Valley, Long Beach, Santa Monica, and the San Fernando Valley, Santa Clarita, San Bernardino County and Orange County. They also handle considerable traffic from several DASH routes, including the A, B, and F lines. In addition, TPG provides shuttle service to Union Station, all local government and court buildings, Staples Center and other downtown destinations from the City National Plaza and Towers on Flower Street, and taxis and other cars use the cut-out along the west side of Flower Street between 5th and 6th Streets. These transportation lines and services are heavily utilized by employees, tenants, patrons, guests and visitors of City National Plaza and Towers. During rush hours, it is sometimes necessary for transit vehicles to queue or double-park at the bus stops because of the heavy bus traffic, which exceeds that of many other downtown locations. Therefore, it is important that this area remain open and accessible on Flower Street throughout the Project to allow staging of shuttles, taxis and passenger vehicles as they load passengers without blocking traffic lanes on Flower Street. The Temporary Construction Easement shown in the Circulated Documents could displace transit and other traffic flow, and create congestion on other downtown streets already severely congested, for a number of years. For the reasons we have described, these impacts are not acceptable and the bus stop area on Flower Street should remain open and functioning at all times. 35

5. The subterranean garages.

TPG is concerned about the width of the subterranean tunnel work along the Adjacent Properties shown on the Draft EIS/EIR and the SEA/RSDEIR. Based on the August 22, 2011 meeting, TPG understands that LACMTA is planning to relocate the pocket track away from the Adjacent Properties, so the tracks under Flower Street would be limited to two tracks. From this information, we understand that the tunneling work would remain further away from the foundations of the Adjacent Properties. This is an important development to TPG, since the two track design should keep the tunneling from severely physically impacting our subterranean structures. However, the SEA/RSDEIR fails to clarify how the impacts to the structures, lateral support, drainage, utilities, geotechnical and other factors affecting the underground levels of the Adjacent Properties will be avoided or mitigated during construction of the Project. 36

In addition to concerns regarding geotechnical matters, TPG also objects to any use of the Temporary Construction Easement or the Potential Revised Temporary Construction Easement for staging or other uses that could damage the subterranean structures below the easement area. Placement of equipment or construction materials within the easement area could cause immediate damage, certainly, but could also cause less obvious, long-term damage. In addition, use of the Temporary Construction Easement area or the Potential Revised Temporary Construction Easement area could result in vibration and other impacts to the garage structure, both at the City National Plaza and Towers and at the J-2 Garage. At the meeting with LACMTA, TPG was advised that no such uses of the Temporary Construction Easement or the Potential Revised Temporary Construction Easement were proposed or contemplated by LACMTA, but TPG needs assurance that the final easement proposed on the Adjacent Properties will not permit any such staging or other uses that would adversely affect the subterranean structure. TPG requests that appropriate mitigation measures be added to the Final EIS/EIR in coordination with TPG, to preclude any such uses of the final Temporary Construction Easement, however it is configured. 37

6. Construction noise and vibration impacts.

Although previously raised in TPG's October 2010 comment letter on the Draft EIS/EIR, the concerns regarding construction phase noise and vibration impacts on TPG's tenants have not been addressed. These impacts will no doubt result in claims being made by our tenants, and TPG will expect compensation from LACMTA, as discussed below. TPG requests that appropriate mitigation measures be adopted with respect to the Adjacent Properties in order to mitigate potential ground movement associated with the construction, including, without limitation, the cut and cover construction and tunneling. We request that measures similar to those described on Page 4.12-45 of the SEA/RSDEIR be adopted with respect to the work contemplated along the Adjacent Properties. 38

7. The SEA/RSDEIR fails to mitigate these severe impacts.

The Draft EIS/EIR clearly acknowledges the substantial impacts that the Temporary Construction Easement and the Project construction would cause, even though it provides no effective mitigation measures. The Draft EIS/EIR offers several conclusory mitigation measures, none of which provides any specifics, particularly with respect to the Adjacent Properties. For example, page 3-52 of the Draft EIS/EIR states that "Bus lines that would be affected by lane closures due to construction activities would continue to operate where feasible in the remaining traffic lanes." Unless the Temporary Construction Easements on both sides of Flower Street and on 5th Street in the vicinity of the existing bus stops are strictly limited in scope and purpose as described in the meeting with LACMTA representatives on August 22, 2011, and all due care and attention is given to assure that access is provided to these stops at all times, there may be no access to buses whatsoever in this area for the period that the Temporary Construction Easements are in effect. The Draft EIS/EIR further states that "Bus stops that would be affected by sidewalk construction would be temporarily relocated and construction activities would be phased to consider the maintenance of bus service and minimize disruption." For the same reasons, this statement is more of a goal than a feasible mitigation. CEQA, including, for example, Sections 21002 and 21003.1, and CEQA Guidelines Sections 15126 through 15126.4, require that all feasible mitigation measures be adopted to address significant impacts; deferral of analysis and determination of mitigation is not allowed. 39

Additionally, an EIR is required to analyze alternatives that could achieve the project's goals but mitigate significant adverse impacts. If there were any intent to use either the Temporary Construction Easement or the Potential Revised Temporary Construction Easement for staging or other purposes that would obstruct or impede vehicles or pedestrians, then we believe that LACMTA should consider the alternative of conducting all such activities on the Maguire Gardens, which would reduce a number of the significant impacts without creating as many impacts itself. The Maguire Gardens would not require extensive infrastructure demolition (except for one restaurant), would not cause substantial impacts to access and fire safety, and would more easily be reconstructed after the Temporary Construction Easement terminates. Operation budgets for the Maguire Gardens are provided by the City of Los Angeles and could be redirected during the easement period. Based on the meeting with LACMTA representatives on August 22, 2011, we understand that the Potential Revised Temporary Construction Easement on the Adjacent Properties will not be used in any manner that would obstruct access (other than the potential impairment from a grade differential discussed above), so that the need to consider an alternative location for the Temporary Construction Easement or Potential Revised Temporary Construction Easement may not be necessary. If our understanding is incorrect, or if LACMTA's plans change, then due consideration should be given to this alternative, regardless of whether the Maguire Gardens is considered a “park” and therefore not subject to the 40

same standards of review in terms of disruption by the Project. We noted in our meeting that it would be much more disruptive, and cause much more significant economic harm, to obstruct the Adjacent Properties than it would be to obstruct the Maguire Gardens. 40 cont'd

8. The SEA/RSDEIR does not acknowledge or analyze all of the operational impacts of the Regional Connector.

The SEA/RSDEIR makes material changes to the LPA, but fails to analyze the impacts of those changes. First, the previously planned Flower/5th/4th Street station has been eliminated, and a traction power substation is now included along Flower between 4th and 5th Streets (p. 2-2; see also p. 2-34); however, the SEA/RSDEIR makes clear that the Flower/5th/4th Street station could still be considered as a future project (p. 2-7). Since this station is a foreseeable consequence of the LPA, its impacts must be analyzed in conjunction with the impacts of the LPA with the other changes to the LPA identified in the SEA/RSDEIR. 41

As noted above, TPG strongly believes that the station at Flower/5th/4th Street is critical to the utility of the Regional Connector and fundamental to the usefulness of the subway system to serve the many thousands of visitors and employees located within the immediate vicinity of this location. The proposed cut and cover construction along Flower Street near the Adjacent Properties will cause our property significant inconvenience and disruption while not providing any of the benefits of the originally proposed station at Flower/5th/4th Street. TPG would accept the necessity of using cut and cover construction on Flower Street if LACTMA were building the station at Flower/4th/5th Street. However, TPG objects to use of the cut and cover construction in front of the Adjacent Properties if no such station is being constructed. If that station will not be provided, then TPG believes that LACMTA should use the tunnel boring machine to continue tunneling south under Flower Street past 6th Street, at which point a machine access point can be created, with cut and cover construction to continue south on Flower Street to the existing tracks adjacent to the 7th Street Metro Station. TPG believes that there is sufficient distance to allow for the necessary elevation changes from the 7th Street Metro level to the planned depth of the subway tunnels without using cut and cover methods in front of the Adjacent Properties. At the August 22, 2011 meeting, when the subject of using the tunnel boring machine was raised for the segment of Flower Street near our Adjacent Properties, the LACMTA representatives stated that existing tie-backs in the street bed would require higher costs to remove if the tunnel boring machine were used. TPG believes that the circulated studies have not adequately analyzed the alternative of using the tunnel boring machine for this segment of the work as compared to the costs and disruption of the cut and cover technique, especially in the context of the elimination of the station at Flower/5th/4th Streets. 42

Second, the LPA appears to include a pocket track, which could also serve as a crossover, located beneath Flower Street between 5th and 6th Streets, which the SEA/RSDEIR states would allow for a new possible future station at this location as a separate project (pp. 2-2, 2-34). Since this new station is a foreseeable consequence of the LPA, its impacts must be analyzed in conjunction with the impacts of the LPA with the other changes to the LPA identified in the SEA/RSDEIR. (See, e.g., *Laurel Heights Improvement Association v. Regents of the University of California* (1988) 47 Cal.3d 376, 396 [an EIR must analyze a "project" defined to include not only the current project, but also future phases of, and other foreseeable consequences of, the initially approved project]; see also, CEQA § 21065 ["project" under CEQA is defined as "an activity which may cause either a direct physical change in the environment, or a reasonably foreseeable indirect physical change in the environment"].) As discussed, TPG understands from the August 22, 2011 meeting that the location of the pocket track in this area is being reconsidered in the final plans, but that even with the relocation of the pocket track, a station could be constructed at Flower/5th/4th Streets. 43

Third, the SEA/RSDEIR states that an enhanced pedestrian walkway has been added to the LPA. However, the SEA/RSDEIR contains only a few sentences describing the walkway - about the length of the walkway – but includes no discussion or analysis of its construction, its construction and operational impacts, or even how it will be accessed, or any other details, *other than to indicate that it will require removing at least one traffic lane from the west side of Flower Street*, which is evidence of a significant impact in and of itself. Other details, such as access to and from the walkways, particularly for handicapped patrons, and other potential impacts are simply not discussed. Additionally, as first mentioned in the first bullet point on Page 2-1 of the SEA/RSDEIR, the reference to the west side of Flower Street is inconsistent with the enhanced pedestrian walkway on the east side of Flower Street, as shown on the Exhibit. Please correct this reference in the Final EIS/EIR to remove any confusion. 44

While TPG's clear preference is for the station to be built at Flower/5th/4th Streets, TPG is supportive of plans to improve pedestrian access from the vicinity of the Adjacent Properties to the 7th Street Metro Station if no station will be built on Flower Street. However, there is no question that this walkway will create significant impacts. To accommodate this enhanced walkway, one traffic lane would be removed from the east side of Flower Street between 4th and 6th Streets. The Draft EIS/EIR acknowledged that the removal of one traffic lane from the east side of Flower Street between 4th and 6th Streets needed for the now-eliminated station would result "in increased intersection congestion along this intersection of Flower Street" (p. 3-43). Despite the fact that the SEA/RSDEIR now removes the same traffic lane from the east side of Flower Street for a different purpose, it does not acknowledge any such significant impact. In fact, it states that it would be a future station at Flower/5th/4th Streets that would require eliminating one traffic lane from the east side of Flower Street in the future. It is unclear how a future station at 45

Flower/5th/4th Streets would impact the widened sidewalk that is being contemplated on the east side of Flower. We believe that the SEA/RSDEIR requires more clarity to avoid any implication that more than one of the existing lanes of Flower Street would be eliminated

45 cont'd

Again, CEQA, including Sections 21002 and 21003.1, and CEQA Guidelines Sections 15126 through 15126.4, require that an EIR identify all significant impacts and feasible mitigation measures to reduce those impacts to a less than significant level; deferred analysis and determination of mitigation is not allowed.

46

Compensation

Under California eminent domain law, LACMTA is, of course, required to compensate TPG for the value of the final Temporary Construction Easement that may be taken and to pay severance damages for the impact of the taking on the remainder of the parcel, which would include the entire City National Plaza and Towers. The potential impacts on the tenants and visitors to the City National Plaza and Towers could be very substantial unless the scope and purpose of the Temporary Construction Easement are tightly restricted as described for the Potential Revised Temporary Construction Easement above. Use of the Temporary Construction Easement for anything other than preserving vehicular and pedestrian access and for separating pedestrians on the sidewalks from the street work by K-rails and fences along the specific areas of the property line that were discussed in the meeting with LACMTA would potentially disrupt the ability of tenants and visitors to use the stores, restaurants, offices and parking in City National Plaza and Towers, and the parking at J-2 Garage in a normal fashion, as a result of impaired access, noise and vibration from work that is contemplated immediately adjacent to the stores, restaurants and offices in City National Plaza and Towers.

47

48

Any such disruption to our tenants will give rise to claims by those tenants that such disruption has caused them to incur damages. Moreover, prospective new tenants will likely consider several years of disruption and inconvenience to be a major impediment to entering into a lease at our property. Downtown office space is currently quite competitive and lessees have a wide range of choices. It is possible, even likely, that any disruptive work adjacent to or on City National Plaza and Towers will cause potential lessees to divert to other spaces in the area instead of leasing at the City National Plaza and Towers.

The impairment of TPG's existing leases and the loss of even one or two new leases could reasonably cause tens of millions of dollars in damages to TPG, all of which would be compensable as severance damages by the taking of the Temporary Construction Easement, if such easement permits any obstruction or impairment of access to the property by tenants or visitors. Such severance damages would add substantially to the cost of the Regional

49

Connector Project, and unnecessarily so, since the impacts of any such disruptive uses of the Temporary Construction Easement in other areas would be significantly less. 49 cont'd

For all of these reasons, TPG respectfully requests that we be an active participant in the specific planning for use of the final Temporary Construction Easement along the Adjacent Properties as well as in the implementation of the mitigation measures associated with the actual work. We request that the general contractor for the Regional Connector be required to consult and coordinate with TPG with respect to all of the work done on and below Flower Street and 5th Street along the Adjacent Properties, so that TPG is assured that the necessary mitigation measures will actually be implemented during the work. As owner and property manager of two properties whose operations, employees, tenants, patrons, guests and visitors will be directly, and negatively, impacted by construction of any of the alternatives, and given the extreme reliance on the functionality of both 5th Street and Flower Street, TPG has a vested interest in minimizing the short term impacts of the construction. As indicated above, TPG expects to be intimately involved during the planning phases to ensure that LACMTA provides all feasible mitigation measures to reduce construction impacts and effects in the vicinity of the Adjacent Properties. 50

In summary:

- TPG requests that the Project be constructed using the tunnel boring technique along the Adjacent Properties, avoiding the surface impacts on the access to, and desirability of, the Adjacent Properties that would result from cut and cover construction. 51
- TPG requests that the proposed station at Flower/5th/4th Street be reinstated in the planning for the Project and be constructed as part of the Project, in which case TPG would accept the cut and cover construction in the area of the station. 52
- If cut and cover construction is used on Flower Street, the steel plates that cover the construction area should be installed at existing grade level to avoid any grade differential between existing sidewalk and Flower Street levels and the level of the construction area, so that vehicles and pedestrians have safe and unobstructed access to and from the Adjacent Properties. 53
- The noise and vibration from the construction under Flower Street should be mitigated by appropriate measures to minimize the impact on the tenants and visitors in our subterranean retail area. 54
- The potential harm to the Adjacent Properties from the tunneling and construction should be minimized by appropriate mitigation measures. 55

- The Temporary Construction Easement should be strictly limited to the area along the property line of the Adjacent Properties that is required for the installation of any necessary K-rails to protect pedestrians from the construction area. If cut and cover construction is used and the steel plates are installed at existing grade level, no ramping would be required at the mid-block crosswalk or at the bus stop and sidewalks. TPG is very concerned about the impact of any grade differential created by the construction and the resulting need for ramps at each garage ramp and pedestrian access point, which may cause safety issues and interfere with the access to and from the Adjacent Properties during all of the hours that our businesses are operating. 56

- The traffic impacts from the construction on Flower Street and the proposed reduction in the number of traffic lanes on Flower Street should be more carefully studied and mitigated. 57

- TPG should be consulted with in the design of the final mitigation measures and should be provided with updated plans for the Project that confirm both the limited scope of the Potential Revised Temporary Construction Easement as well as the relocation of the pocket track away from Flower Street. 58

Thank you for your consideration of our concerns and our requests. TPG looks forward to working with LACMTA for the long-term success of the Regional Connector Project. 59

Sincerely,

THOMAS PROPERTIES GROUP, INC.

Responses to Comments from Thomas Properties Group, Inc., Ricci, Thomas S.

Response to Comment R-BU4-1

Thank you for the information regarding the properties. As written in the 2011 CEQA guidelines §15088.5(f)(2):

> *When the EIR is revised only in part and the lead agency is recirculating only the revised chapters or portions of the EIR, the lead agency may request that reviewers limit their comments to the revised chapters or portions of the recirculated EIR. The lead agency need only respond to (i) comments received during the initial circulation period that relate to chapters or portions of the document that were not revised and recirculated, and (ii) comments received during the recirculation period that relate to the chapters or portions of the earlier EIR that were revised and recirculated. The lead agency's request that reviewers limit the scope of their comments shall be included either within the text of the revised EIR or by an attachment to the revised EIR.*

Also, per 23 CFR 771.130(b), an Environmental Assessment may be prepared to assess the impacts of changes, new information, or new circumstances and to ascertain the significance of any new impacts. Sections containing significant new information were recirculated as part of the Supplemental EA/Recirculated Draft EIR Sections. Sections that were not recirculated do not contain significant new information. Responses to comments from the Thomas Properties Group (TPG) on the Supplemental EA/Recirculated Draft EIR Sections below are provided in context with both the Supplemental EA/Recirculated Draft EIR Sections and the Draft EIS/EIR. Responses to Thomas Properties Group's comments received during the Draft EIS/EIR comment period (September 3, 2010 to October 18, 2010) are provided in Volume F-2 of this Final EIS/EIR as responses to comment letters BU30 and BU36.

Response to Comment R-BU4-2

Metro appreciates TPG's support of the Regional Connector project. The Locally Preferred Alternative alignment would run underneath Flower Street, adjacent to the referenced properties. It is Metro's goal to minimize construction impacts to the extent feasible. Metro has made refinements to the Locally Preferred Alternative since publication of the Draft EIS/EIR to minimize the construction impacts of the Regional Connector, as described in Chapter 2, Alternatives Considered, of this Final EIS/EIR. Metro would coordinate construction activities with emergency service personnel to ensure that emergency services and response times are not impacted, as indicated in Section 4.15.4.1 of the Draft EIS/EIR and Section 4.15.4.2 of this Final EIS/EIR. This coordination has been included as mitigation measure number CN-2 in the Mitigation Monitoring and Reporting Program for the Locally Preferred Alternative (Chapter 8 of this Final EIS/EIR).

Response to Comment R-BU4-3

The Metro Board of Directors designated the Fully Underground LRT Alternative, without the Flower/5th/4th Street station, as the Locally Preferred Alternative on October 28, 2010. As indicated in Chapter 2, Alternatives Considered, of the Supplemental EA/Recirculated Draft EIR Sections and this Final EIS/EIR, the Locally Preferred Alternative would not preclude the

Flower/5th/4th Street station from being built as a separate future project. Neither the Draft EIS/EIR nor the Supplemental EA/Recirculated Draft EIR Sections identify the Flower/5th/4th Street station as a reasonably foreseeable future development. The Locally Preferred Alternative would be fully functional and would fully meet the purpose and need identified in Chapter 1 of the Draft EIS/EIR regardless of whether the Flower/5th/4th Street station is built, thus the ability to construct the Flower/5th/4th Street station does not affect the scope of the project. At this time, while the design of the Regional Connector system would allow construction of the station, no funding has been identified for such a station, and it is therefore not considered a reasonably foreseeable future phase of the Regional Connector. Metro understands the beneficial access and added convenience that a station at this location would provide. The Locally Preferred Alternative includes an enhanced pedestrian walkway that would improve connections to the existing 7th Street/Metro Center Station from the area around 5th and Flower Streets.

Response to Comment R-BU4-4

Since publication of the Supplemental EA/Recirculated Draft EIR Sections, the size of the proposed temporary construction easement on Thomas Properties Group's property has been reduced, consistent with Metro's continuing goal to minimize construction impacts and the use of private property. This reduction is reflected in Table 4.2-5 and the parcel impacts table in Appendix 1, Locally Preferred Alternative Drawings, of this Final EIS/EIR. The reduced temporary construction easement would cover areas expected to be required for Americans with Disabilities Act (ADA)-compliant access from the sidewalk to the private property, and access from the roadway to the parking garage and driveways. Metro plans to use the temporary construction easement on TPG property to preserve vehicle and pedestrian access, and to separate pedestrians from street work with K-rail and fences.

Response to Comment R-BU4-5

A. Raised Deck. Decking of the construction area is a necessary component of cut and cover construction to maintain vehicular and pedestrian access throughout construction. Concrete deck panels would be used for this activity. Any decking configurations would require construction of ADA-compliant ramps and accesses as well as modifications to vehicular access points to the garages and driveway along Flower Street. Any decking configurations would be designed to safely accommodate the undercarriage and overhead clearances of vehicles using the driveways, garages, and loading docks.

   Access to and from the bus stop, shuttle area, and mid-block pedestrian crossing would be accommodated in any decking configuration.

B. Garage Access. Decking of the construction area is a necessary component of cut and cover construction to maintain vehicular and pedestrian access throughout construction. Any decking configurations would require construction of ADA-compliant ramps and accesses as well as modifications to vehicular access points to the garages and driveway along Flower Street. Any decking configurations would be designed to accommodate the undercarriage and overhead clearances of vehicles using the driveways, garages, and loading docks. The temporary (during construction) roadway configurations will be reviewed with the Los Angeles Department of Transportation (LADOT) for compliance with roadway standards and designed to meet vehicle standards.

Access to and from the bus stop, shuttle area, and mid-block pedestrian crossing would be accommodated in any decking configuration.

Response to Comment R-BU4-6

The temporary (during construction) roadway configurations will be reviewed with LADOT for compliance with roadway standards and designed to meet vehicle standards, including those pertaining to sight lines.

Access to and from the bus stop, shuttle area, and mid-block pedestrian crossing would be accommodated in any decking configuration.

As stated in Section 3.4.1.4 of the Draft EIS/EIR, Section 3.4.2 of this Final EIS/EIR, and mitigation measure number TR-1 in the Mitigation Monitoring and Reporting Program for the Locally Preferred Alternative (Chapter 8 of this Final EIS/EIR), access to businesses would be maintained during business operating hours throughout construction.

As shown in mitigation measure number AQ-15 in the Mitigation Monitoring and Reporting Program for the Locally Preferred Alternative (Chapter 8 of this Final EIS/EIR), construction activity that affects traffic flow on the arterial system would be primarily limited to off-peak hours, thus minimizing the traffic congestion impacts on Flower Street during construction.

Response to Comment R-BU4-7

As stated in Section 3.4.1.4 of the Draft EIS/EIR, Section 3.4.2 of this Final EIS/EIR, and mitigation measure number TR-1 in the Mitigation Monitoring and Reporting Program for the Locally Preferred Alternative (Chapter 8 of this Final EIS/EIR), access to businesses would be maintained during business operating hours throughout construction. This includes late-night businesses such as the 24-hour gym. Access to and from the buses, shuttles, 505 Flower retail escalators, and pedestrian bridges would be maintained throughout construction. As indicated in Section 3.3.5.1.2 of the Draft EIS/EIR and this Final EIS/EIR, intermittent lane closures would be needed during construction. When a crosswalk is closed due to construction activities, pedestrians would be directed to nearby alternate crosswalks, as indicated in mitigation measure number TR-4 of the Mitigation Monitoring and Reporting Program (Chapter 8 of this Final EIS/EIR).

Response to Comment R-BU4-8

Metro would keep entrances and exits clear of obstructions, and would ensure that adequate exit routes and safe zones are maintained at all times during construction, as indicated in Section 4.15.4.2.1 of this Final EIS/EIR and mitigation measure number SS-15 in the Mitigation Monitoring and Reporting Program for the Locally Preferred Alternative (Chapter 8 of this Final EIS/EIR). Metro would not allow construction activities to impede safe evacuation of the buildings at any time.

Response to Comment R-BU4-9

Decking of the construction area is a necessary component of cut and cover construction to maintain vehicular and pedestrian access throughout construction. Concrete deck panels would

be used as a temporary deck for vehicles and pedestrians during cut and cover operations on Flower Street. Preference for deck panels to be installed at existing grade level is noted.

Any decking configurations would require construction of ADA-compliant ramps and accesses as well as modifications to vehicular access points to the garages and driveway along Flower Street, as indicated in Section 4.15.4.2.1 of this Final EIS/EIR and Section 4.18.2.5.1 of the Supplemental EA/Recirculated Draft EIR Sections and this Final EIS/EIR. Any decking configurations would be designed to safely accommodate pedestrians, the undercarriage and overhead clearances of vehicles using the driveways, garages, and loading docks as indicated in the same sections.

Response to Comment R-BU4-10

As stated in Section 3.4.1.2 of the Draft EIS/EIR, Section 3.4.2 of this Final EIS/EIR, and mitigation measure number TR-1 in the Mitigation Monitoring and Reporting Program for the Locally Preferred Alternative (Chapter 8 of this Final EIS/EIR), access to businesses would be maintained during their business operating hours throughout construction. This includes businesses with late hours and those that operate 24 hours per day. As stated in Section 4.7.3.5.1 of the Supplemental EA/Recirculated Draft EIR Sections and this Final EIS/EIR, construction would be consistent with the goals of Section 41.40(a) of the Los Angeles Municipal Code. The construction contractor would also use best management practices (BMPs) to reduce construction-related noise levels, such as temporary noise barriers, high performance mufflers, portable noise sheds, and other measures indicated in the Noise and Vibration section of the Mitigation Monitoring and Reporting Program (Chapter 8 of this Final EIS/EIR).

Response to Comment R-BU4-11

Some land use types are more sensitive to noise than others. For example, parks, churches, and residences are typically more noise-sensitive than industrial and commercial areas. The noise analysis contained in Section 4.7, Noise and Vibration, of the Supplemental EA/Recirculated Draft EIR Sections and this Final EIS/EIR used the Federal Transit Administration noise impact criteria classification of sensitive land uses:

- Category 1: Buildings or parks where low noise is an essential element of their purpose (e.g., amphitheaters and concert pavilions)
- Category 2: Buildings where people normally sleep, including residences, hospitals, and hotels where nighttime sensitivity is assumed to be of utmost importance
- Category 3: Institutional land uses with primarily daytime uses that depend on low noise as an important part of operations (e.g., schools, libraries, churches, theaters, and places of study)

The City National Plaza and Towers is an office land use, which is not considered a sensitive land use. The same applies for the property's restaurant and retail uses.

As indicated in Section 4.7, Noise and Vibration, of this Final EIS/EIR, consistency with the goals of applicable local ordinances and implementation of BMPs would ensure that noise and

vibration levels associated with construction of the Locally Preferred Alternative would not result in a significant adverse noise impact under CEQA or NEPA. Given that the Locally Preferred Alternative would not result in an adverse noise impact during construction, mitigation is not required. The alignment would be constructed beneath Flower Street in the vicinity of the City National Plaza and Towers using cut and cover construction. Cut and cover construction would involve large bulldozers and drill rigs as the main sources of construction vibration. As indicated in Section 4.7, Noise and Vibration, vibration impacts (including ground-borne noise) associated with large bulldozers and drill rigs would be less than significant under CEQA and not substantially adverse under NEPA. Nonetheless, mitigation measures were included in the Supplemental EA/Recirculated Draft EIR Sections which would further reduce annoyance to sensitive land uses caused by ground-borne vibration. Since designation of a Locally Preferred Alternative, mitigation measures have been refined and confirmed for the Locally Preferred Alternative, which are listed in Section 4.7, Noise and Vibration, of this Final EIS/EIR, based on input received during the Draft EIS/EIR and Supplemental EA/Recirculated Draft EIR Sections public review periods. Mitigation measures for the Locally Preferred Alternative have been carried forward and included in the Mitigation Monitoring and Reporting Program for the Locally Preferred Alternative (Chapter 8 of this Final EIS/EIR).

Response to Comment R-BU4-12

The proposed temporary construction easement on TPG's property has been reduced, consistent with Metro's continuing goal to minimize construction impacts and the use of private property. This reduction is reflected in Table 4.2-5 and the parcel impacts table in Appendix 1, Locally Preferred Alternative Drawings, of this Final EIS/EIR. The pocket track is being considered for relocation as a refinement to the Locally Preferred Alternative, however that determination has not been made at this time. Only locations that would not create new impacts beyond those disclosed in the Draft EIS/EIR and Supplemental EA/Recirculated Draft EIR Sections are under consideration. Locations under consideration would minimize or avoid impacts, or otherwise would not create new impacts. The location will be confirmed during final design.

Response to Comment R-BU4-13

The proposed temporary construction easement on TPG's property has been reduced, consistent with Metro's continuing goal to minimize construction impacts and the use of private property. This reduction is reflected in Table 4.2-5 and the parcel impacts table in Appendix 1, Locally Preferred Alternative Drawings, of this Final EIS/EIR. The pocket track is being considered for relocation as a refinement to the Locally Preferred Alternative, however that determination has not been made at this time. Only locations that would not create new impacts beyond those disclosed in the Draft EIS/EIR and Supplemental EA/Recirculated Draft EIR Sections are under consideration. Locations under consideration would minimize or avoid impacts, or otherwise would not create new impacts. The location will be confirmed during final design. The comments in the bulleted list are addressed individually in Responses to Comments R-BU4-14 through R-BU4-21, below.

Response to Comment R-BU4-14

Flower Street from 4th Street to the existing tracks just south of 6th Street is highly constrained with existing subsurface tie-backs from previous construction projects that interfere with

tunneling activity. Tunneling activities using a tunnel boring machine south of 4th Street are hindered as existing tie-backs are encountered. Each time a tie-back is encountered, tunneling would halt in order to allow the tie-back to be removed. This constraint renders tunnel boring machine construction not practicable in this area. Also, it would not be feasible to construct the proposed pocket track in this location using a TBM. This is indicated in Section 2.3.6.2 of the Supplemental EA/Recirculated Draft EIR Sections and this Final EIS/EIR.

Response to Comment R-BU4-15

Decking of the construction area is a necessary component of cut and cover construction to maintain vehicular and pedestrian access throughout construction. Metro will continue to review opportunities to reduce construction impacts and improve schedule. The temporary (during construction) roadway configurations will be reviewed with LADOT for compliance with roadway standards and designed to meet vehicle standards. As part of the Metro Construction Community Relations program, Metro will meet with all business and property owners to confirm access need and to keep the community aware of construction activities prior to initiation. Any decking configurations would require construction of ADA-compliant ramps and accesses as well as modifications to vehicular access points to the garages and driveway along Flower Street, as indicated in Section 4.15.4.2.1 of this Final EIS/EIR and Section 4.18.2.5.1 of the Supplemental EA/Recirculated Draft EIR Sections and this Final EIS/EIR. Any decking configurations would be designed to safely accommodate pedestrians, the undercarriage and overhead clearances of vehicles using the driveways, garages, and loading docks as indicated in the same sections.

As stated in Section 3.4.1.2 of the Draft EIS/EIR, Section 3.4.2 of this Final EIS/EIR, and mitigation measure number TR-1 in the Mitigation Monitoring and Reporting Program for the Locally Preferred Alternative (Chapter 8 of this Final EIS/EIR), access to businesses would be maintained during their business operating hours throughout construction. As shown in mitigation measure number AQ-15 in the Mitigation Monitoring and Reporting Program for the Locally Preferred Alternative (Chapter 8 of this Final EIS/EIR), construction activity that would affect traffic flow on the arterial system would be primarily limited to off-peak hours, thus minimizing the traffic congestion impacts on Flower Street during construction.

Response to Comment R-BU4-16

Decking of the construction area is a necessary component of cut and cover construction to maintain vehicular and pedestrian access throughout construction. Metro will continue to review opportunities to reduce construction impacts and improve schedule. Access will be maintained. As part of the Metro Construction Community Relations program, Metro will meet with all business and property owners to confirm access need and to keep the community aware of construction activities prior to initiation. Any decking configurations would require construction of ADA-compliant ramps and accesses as well as modifications to vehicular access points to the garages and driveway along Flower Street, as indicated in Section 4.15.4.2.1 of this Final EIS/EIR and Section 4.18.2.5.1 of the Supplemental EA/Recirculated Draft EIR Sections and this Final EIS/EIR. Any decking configurations would be designed to safely accommodate pedestrians, the undercarriage and overhead clearances of vehicles using the driveways, garages, and loading docks as indicated in the same sections. Impacts to pedestrian circulation during

construction, such as temporary sidewalk closures and changes to pedestrian flow, are discussed in Section 3.3.5.1.4 of the Draft EIS/EIR and this Final EIS/EIR.

Response to Comment R-BU4-17

As stated in Section 3.4.1.4 of the Draft EIS/EIR, Section 3.4.2 of this Final EIS/EIR, and mitigation measure number TR-1 in the Mitigation Monitoring and Reporting Program for the Locally Preferred Alternative (Chapter 8 of this Final EIS/EIR), access to businesses would be maintained during business operating hours throughout construction.

Response to Comment R-BU4-18

As discussed in Section 3.3.5.1.2 of the Draft EIS/EIR and this Final EIS/EIR, temporary peak period lane closures would be minimal, and temporary off-peak lane closures would be intermittent, so as to minimize traffic circulation impacts during peak times. As included in mitigation measure number TR-1 in the Mitigation Monitoring and Reporting Program for the Locally Preferred Alternative (Chapter 8 of this Final EIS/EIR), Metro would maintain traffic flow to the degree feasible. Mitigation measure number TR-9 would ensure that shuttle bus drop-off areas at City National Plaza would be provided throughout construction. Mitigation measure numbers TR-12 and TR-13 would ensure that Metro would maintain access to bus stops, minimize temporary bus stop closures, and ensure that any temporarily closed bus stops are relocated to a nearby location to minimize inconvenience. Similar candidate mitigation measures were also discussed in Sections 3.4.1.1 and 3.4.1.2 of the Draft EIS/EIR, Section 3.4.2 of this Final EIS/EIR, and the Transportation Impacts section of the Mitigation Monitoring and Reporting Program (Chapter 8 of this Final EIS/EIR).

Response to Comment R-BU4-19

Metro does not anticipate construction-related damage to the building. As discussed in Section 4.7.3.5.1 of the Draft EIS/EIR, Supplemental EA/Recirculated Draft EIR Sections, and this Final EIS/EIR, Metro would conduct a pre-construction survey of all structures within 21 feet of anticipated vibration-producing construction activity to verify the building category (type of construction), structural condition, and to provide a baseline for monitoring of ground-borne vibration and the potential for ground-borne vibration to cause damage. During construction, use of building protection measures such as underpinning, soil grouting, or other forms of ground improvement, use of lower vibration equipment and/or construction techniques, combined with a geotechnical and vibration monitoring program would be used to protect identified sensitive structures. These mitigation measures were included in Sections 4.7.4.1 and 4.9.4.1 of the Draft EIS/EIR and Supplemental EA/Recirculated Draft EIR Sections, Section 4.7.4.2.1 and 4.9.4.2.1 of this Final EIS/EIR, and are included as mitigation measure numbers NV-1 and GT-1 of the Mitigation Monitoring and Reporting Program for the Locally Preferred Alternative (Chapter 8 of this Final EIS/EIR). In the unlikely event that there is damage due to construction, Metro would ensure that any damage caused by construction is repaired to pre-construction survey condition.

Response to Comment R-BU4-20

Please refer to Response to Comment R-BU4-11, above. Section 4.7.5 of the Supplemental EA/Recirculated Draft EIR Sections specifically identified mitigation measures for the Locally Preferred Alternative. This section includes mitigation measures that would be implemented to

ensure to address the potential for noise and vibration impacts in the vicinity of the TPG properties. Since designation of a Locally Preferred Alternative, mitigation measures have been refined and confirmed for the Locally Preferred Alternative, which are listed in Section 4.7, Noise and Vibration, of this Final EIS/EIR, based on input received during the public review periods for the Draft EIS/EIR and Supplemental EA/Recirculated Draft EIR Sections. Mitigation measures for the Locally Preferred Alternative have been carried forward and included in the Mitigation Monitoring and Reporting Program for the Locally Preferred Alternative (Chapter 8 of this Final EIS/EIR).

Response to Comment R-BU4-21

Refinements made to the Locally Preferred Alternative would not create new significant traffic impacts under CEQA or adverse effects under NEPA, or exacerbate impacts beyond what is disclosed in the Draft EIS/EIR. The Draft EIS/EIR analyzed this permanent reduction in traffic lanes on Flower Street in Section 3.3.5.2.2. The same mitigation measures for this lane reduction identified in Section 3.4.2.2.4 of the Draft EIS/EIR have been included in Section 3.4.2 and the Mitigation Monitoring and Reporting Program for the Locally Preferred Alternative (Chapter 8) of this Final EIS/EIR as mitigation measure numbers TR-6, TR-7, and TR-8.

Response to Comment R-BU4-22

Mitigation measure number TR-1 in the Mitigation Monitoring and Reporting Program for the Locally Preferred Alternative (Chapter 8 of this Final EIS/EIR) contains additional detail about how Metro will meet its commitment to maintain access to businesses (including those on the TPG property) during operating hours, including temporary driveways and signage.

Since publication of the Supplemental EA/Recirculated Draft EIR Sections, the size of the proposed temporary construction easement on TPG's property has been reduced, consistent with Metro's continuing goal to minimize construction impacts and the use of private property. This reduction is reflected in Table 4.2-5 and the parcel impacts table in Appendix 1, Locally Preferred Alternative Drawings, of this Final EIS/EIR. This reduced easement would cover less of the street frontage adjacent to the referenced properties. Decking of the construction area is a necessary component of cut and cover construction to maintain vehicular and pedestrian access throughout construction. Any decking configurations would require construction of ADA-compliant ramps and accesses as well as modifications to vehicular access points to the garages and driveway along Flower Street, as indicated in Section 4.15.4.2.1 of this Final EIS/EIR and Section 4.18.2.5.1 of the Supplemental EA/Recirculated Draft EIR Sections and this Final EIS/EIR. Any decking configurations would be designed to accommodate the undercarriage and overhead clearances of vehicles using the driveways, garages, and loading docks as indicated in the same sections. The temporary (during construction) roadway configurations will be reviewed with LADOT for compliance with roadway standards and designed to meet vehicle standards.

The construction traffic impacts on Flower Street were adequately analyzed in Section 3.3.5.1.2 of the Draft EIS/EIR and this Final EIS/EIR. Mitigation measures to address construction traffic impacts were presented in Section 3.4.2.2.4 of the Draft EIS/EIR, and have been adopted in Section 3.4.2 and the Mitigation Monitoring and Reporting Program for the Locally Preferred

Alternative (Chapter 8) of this Final EIS/EIR. These mitigation measures would minimize traffic impacts during construction.

Metro would ensure that construction activities do not cause safety hazards. Candidate construction safety measures were included in Section 4.15.4.1 of the Draft EIS/EIR. These mitigation measures have been expanded and incorporated into Section 4.15.4.2.1 and the Mitigation Monitoring and Reporting Program for the Locally Preferred Alternative (Chapter 8) of this Final EIS/EIR.

Per the discussion with TPG at the referenced meeting, and as stated in Section 3.4.1.2 of the Draft EIS/EIR and mitigation measure number TR-1 in the Mitigation Monitoring and Reporting Program for the Locally Preferred Alternative (Chapter 8 of this Final EIS/EIR), access to businesses would be maintained during their business operating hours throughout construction. This includes late night and 24-hour businesses.

Response to Comment R-BU4-23

The Draft EIS/EIR, Supplemental EA/Recirculated Draft EIR Sections, and this Final EIS/EIR do not defer analysis or mitigation. The Draft EIS/EIR, Supplemental EA/Recirculated Draft EIR Sections, and this Final EIS/EIR identify the proposed temporary construction easement in Section 4.2.3.5 and Appendix II, Conceptual Drawings for Build Alternatives Analyzed in the Draft EIS/EIR. In compliance with CEQA, all proposed activities to be performed on temporary construction easements corridor-wide are clearly defined in a bulleted list in Sections 2.4.1 and 4.18.2.3 of the Draft EIS/EIR, Supplemental EA/Recirculated Draft EIR Sections, and this Final EIS/EIR. These activities were included in the analysis performed in Chapters 3 and 4 of the Draft EIS/EIR and this Final EIS/EIR. Since publication of the Supplemental EA/Recirculated Draft EIR Sections, the size of the proposed temporary construction easement on TPG's property has been reduced, consistent with Metro's continuing goal to minimize construction impacts and the use of private property. This reduction is reflected in Table 4.2-5 and the parcel impacts table in Appendix 1, Locally Preferred Alternative Drawings, of this Final EIS/EIR. In addition to a mapped outline of the location of the proposed easement on within the parcel, Table 4.2-5 provides maximum square footage. Metro plans to use the reduced temporary construction easement on TPG property to preserve vehicle and pedestrian access, and to separate pedestrians from street work with K-rail and fences. Mitigation measures identified in Section 4.18.4 of the Draft EIS/EIR and refined and confirmed in Section 4.18.4.2 and the Mitigation Monitoring and Reporting Program for the Locally Preferred Alternative (Chapter 8) of this Final EIS/EIR indicate how Metro would reduce or avoid construction impacts.

Response to Comment R-BU4-24

Any decking configurations would be designed to accommodate the undercarriage and overhead clearances of vehicles using the driveways, garages, and loading docks. The temporary (during construction) roadway configurations will be reviewed with LADOT for compliance with roadway standards and designed to meet vehicle standards.

Mitigation measure number TR-9 in the Mitigation Monitoring and Reporting Program for the Locally Preferred Alternative (Chapter 8 of this Final EIS/EIR) would ensure that shuttle bus drop-off areas at City National Plaza would be provided throughout construction. Mitigation

measure numbers TR-12 and TR-13 would ensure that Metro would maintain access to bus stops, minimize temporary bus stop closures, and ensure that any temporarily closed bus stops are relocated to a nearby location to minimize inconvenience. Metro would also coordinate any temporary closures and relocations with other affected bus operators. Candidate mitigation measures similar to these final mitigation measures were also discussed in Sections 3.4.1.1 and 3.4.1.2 of the Draft EIS/EIR. Decking configurations used during construction would be designed to accommodate access to and from the bus stop, shuttle, and taxi drop-off areas. This is discussed in Section 4.18.2.1 of the Supplemental EA/Recirculated Draft EIR Sections and this Final EIS/EIR, which states that decking would allow the street to be open while construction activities occur underneath. No impacts to the pedestrian overpass over 5th Street are anticipated, since it would not be blocked or altered by construction activities.

As stated in Section 3.4.1.2 of the Draft EIS/EIR and mitigation measure number TR-1 in the Mitigation Monitoring and Reporting Program for the Locally Preferred Alternative (Chapter 8 of this Final EIS/EIR), access to businesses would be maintained during their business operating hours throughout construction. This includes the office towers and garages.

Mitigation measures identified in Section 4.18.4 of the Draft EIS/EIR and refined and confirmed in Section 4.18.4.2 and the Mitigation Monitoring and Reporting Program for the Locally Preferred Alternative (Chapter 8) of this Final EIS/EIR indicate how Metro would reduce or avoid construction impacts.

Response to Comment R-BU4-25

The Draft EIS/EIR, Supplemental EA/Recirculated Draft EIR Sections, and this Final EIS/EIR do not defer analysis or mitigation. The Draft EIS/EIR, Supplemental EA/Recirculated Draft EIR Sections, and this Final EIS/EIR identify the proposed temporary construction easement in Section 4.2.3.5 and Appendix II, Conceptual Drawings for Build Alternatives Analyzed in the Draft EIS/EIR. In compliance with CEQA, all proposed activities to be performed on temporary construction easements corridor-wide are clearly defined in a bulleted list in Sections 2.4.1 and 4.18.2.3 of the Draft EIS/EIR, Supplemental EA/Recirculated Draft EIR Sections, and this Final EIS/EIR. These activities were included in the analysis performed in Chapters 3 and 4 of the Draft EIS/EIR and this Final EIS/EIR. Metro plans to use the temporary construction easement on TPG property to preserve vehicle and pedestrian access, and to separate pedestrians from street work with K-rail and fences. The Draft EIS/EIR and Final EIS/EIR fully disclose that reduction of access to properties along the proposed alignment would be a potential construction impact of the Locally Preferred Alternative in Section 4.3.3.5.

Feasible mitigation measures to address these impacts exist, were proposed as candidate measures in the Draft EIS/EIR, and have been committed to in this Final EIS/EIR. Mitigation measures to address the impacts of the activities to be performed on the temporary construction easements corridor-wide are identified in Section 4.18.4.3 of the Draft EIS/EIR and have been refined and confirmed as committed mitigation measures in Section 4.18.4.2 and the Mitigation Monitoring and Reporting Program for the Locally Preferred Alternative (Chapter 8) of this Final EIS/EIR. Metro plans to use the temporary construction easement on TPG property to preserve vehicle and pedestrian access, and to separate pedestrians from street work with K-rail and fences. Mitigation measures to address property and business access are proposed in Section 4.3.4 and 3.4.1.4 of the Draft EIS/EIR and have been refined and confirmed as

committed mitigation measures in Sections 3.4.2 and 4.3.4.2 and the Mitigation Monitoring and Reporting Program for the Locally Preferred Alternative (Chapter 8) of this Final EIS/EIR as mitigation measure numbers TR-1, CN-1, CN-2, CN-3, CN-4, CN-5, CN-6, DR-4, and DR-5. Metro would ensure that any further refinements made to the Locally Preferred Alternative during the final design phase of the project do not create new significant impacts under CEQA or adverse effects under NEPA, or worsen impacts beyond what is disclosed in the EIS/EIR. Since publication of the Supplemental EA/Recirculated Draft EIR Sections, the size of the proposed temporary construction easement on TPG's property has been reduced, consistent with Metro's continuing goal to minimize construction impacts and the use of private property. This reduction is reflected in Table 4.2-5 and the parcel impacts table in Appendix 1, Locally Preferred Alternative Drawings, of this Final EIS/EIR.

Response to Comment R-BU4-26

The limitation of comments to the contents of the Draft EIS/EIR and the Supplemental EA/Recirculated Draft EIR Sections is noted.

Response to Comment R-BU4-27

Metro is aware of the vehicular access and egress points on the property. Any decking configurations would require construction of ADA-compliant ramps and accesses as well as modifications to vehicular access points to the garages and driveway along Flower Street, as indicated in Section 4.15.4.2.1 of this Final EIS/EIR and Section 4.18.2.5.1 of the Supplemental EA/Recirculated Draft EIR Sections and this Final EIS/EIR. Any decking configurations would be designed to accommodate the undercarriage and overhead clearances of vehicles using the driveways, garages, and loading docks as indicated in the same sections. The temporary (during construction) roadway configurations will be reviewed with LADOT for compliance with roadway standards and designed to meet vehicle standards.

As stated in Section 3.4.1.4 of the Draft EIS/EIR, Section 3.4.2 of this Final EIS/EIR, and mitigation measure number TR-1 in the Mitigation Monitoring and Reporting Program for the Locally Preferred Alternative (Chapter 8 of this Final EIS/EIR), access to businesses would be maintained during business operating hours throughout construction. This includes both of the City National Plaza office towers. Metro would keep entrances and exits clear of obstructions, and would ensure that adequate exit routes and safe zones are maintained at all times during construction, as indicated in Section 4.15.4.2.1 of this Final EIS/EIR and mitigation measure number SS-15 in the Mitigation Monitoring and Reporting Program for the Locally Preferred Alternative (Chapter 8 of this Final EIS/EIR). Metro would not allow construction activities to impede safe evacuation of the buildings or access for emergency personnel at any time.

It may not be possible to keep all vehicular entrances to garages open at all times during operating hours, but Metro would ensure that access is provided via other vehicular entrances during those times as part of its goal to maintain access to businesses. Metro would coordinate with garage owners to ensure safety and minimize inconvenience.

Response to Comment R-BU4-28

Any decking configurations would require construction of ADA-compliant ramps and accesses as well as modifications to vehicular access points to the garages and driveway along Flower

Street, as indicated in Section 4.15.4.2.1 of this Final EIS/EIR and Section 4.18.2.5.1 of the Supplemental EA/Recirculated Draft EIR Sections and this Final EIS/EIR. Any decking configurations would be designed to accommodate the undercarriage and overhead clearances of vehicles using the driveways, garages, and loading docks as indicated in the same sections. The temporary (during construction) roadway configurations will be reviewed with LADOT for compliance with roadway standards and designed to meet vehicle standards. As stated in Section 3.4.1.4 of the Draft EIS/EIR, Section 3.4.2 of this Final EIS/EIR, and mitigation measure number TR-1 in the Mitigation Monitoring and Reporting Program for the Locally Preferred Alternative (Chapter 8 of this Final EIS/EIR), access to businesses would be maintained during business operating hours throughout construction. This applies to parking garages, including those that operate 24-hours a day. It may not be possible to keep all vehicular entrances to garages open at all times during operating hours, but Metro would ensure that access is provided via other vehicular entrances during those times so that the garages can continue to operate. Metro would coordinate with garage owners to ensure safety and minimize inconvenience.

Response to Comment R-BU4-29

As stated in Section 3.4.1.4 of the Draft EIS/EIR, Section 3.4.2 of this Final EIS/EIR, and mitigation measure number TR-1 in the Mitigation Monitoring and Reporting Program for the Locally Preferred Alternative (Chapter 8 of this Final EIS/EIR), access to businesses would be maintained during business operating hours throughout construction. This includes both of the City National Plaza office towers. Access would be ADA-compliant. Any decking configuration would be designed to accommodate the mid-block crosswalk on Flower Street between 5th and 6th Streets, as well as pedestrian crossings at intersections.

Response to Comment R-BU4-30

The Draft EIS/EIR and this Final EIS/EIR state that reduction of access to properties along the proposed alignment would be a potential construction impact of the Locally Preferred Alternative in Section 4.3.3.5. As stated in Section 3.4.1.4 of the Draft EIS/EIR, Section 3.4.2 of this Final EIS/EIR, and mitigation measure number TR-1 in the Mitigation Monitoring and Reporting Program for the Locally Preferred Alternative (Chapter 8 of this Final EIS/EIR), access to businesses would be maintained during business operating hours throughout construction. This includes access to B Level businesses. No restaurants or other businesses on the referenced property would be required to close as part of construction activities. No changes to this potential impact have occurred since its analysis in the Draft EIS/EIR, so it was not necessary to repeat this discussion in the Supplemental EA/Recirculated Draft EIR Sections.

Response to Comment R-BU4-31

The access to and from the pedestrian overpasses would thereby be maintained during construction through the use of temporary ramps and K-rail. Safe pedestrian access would be provided at all times. Transportation impacts during construction, including those to pedestrian circulation, are described in Section 3.3.5.1 of the Draft EIS/EIR and this Final EIS/EIR. Mitigation measures to address these impacts were included in Section 3.4.1 of the Draft EIS/EIR and have been incorporated into Section 3.4.2 and the Mitigation Monitoring and Reporting Program for the Locally Preferred Alternative (Chapter 8) of this Final EIS/EIR.

Response to Comment R-BU4-32

As stated in Section 3.4.1.4 of the Draft EIS/EIR, Section 3.4.2 of this Final EIS/EIR, and mitigation measure number TR-1 in the Mitigation Monitoring and Reporting Program for the Locally Preferred Alternative (Chapter 8 of this Final EIS/EIR), access to businesses would be maintained during business operating hours throughout construction. This includes both of the City National Plaza office towers. Metro would keep entrances and exits clear of obstructions, and would ensure that adequate exit routes and safe zones are maintained at all times during construction, as indicated in Section 4.15.4.2.1 of this Final EIS/EIR and mitigation measure number SS-15 in the Mitigation Monitoring and Reporting Program for the Locally Preferred Alternative (Chapter 8 of this Final EIS/EIR). Metro would not allow construction activities to impede safe evacuation of the buildings or access for emergency personnel at any time.

Response to Comment R-BU4-33

Metro would coordinate construction activities with emergency service personnel to ensure that emergency services and response times are not impacted, as indicated in Section 4.15.4.1 of the Draft EIS/EIR. This coordination has been included as mitigation measure number CN-2 in the Mitigation Monitoring and Reporting Program for the Locally Preferred Alternative (Chapter 8 of this Final EIS/EIR). Metro is aware of the difference in elevation between the plaza level and Figueroa Street and would not allow construction activities to impede access for emergency personnel at any time.

Response to Comment R-BU4-34

Metro is aware of the subterranean location of the B level retail area. Metro would keep entrances and exits clear of obstructions, and would ensure that adequate exit routes and safe zones are maintained at all times during construction, as indicated in Section 4.15.4.2.1 of this Final EIS/EIR and mitigation measure number SS-15 in the Mitigation Monitoring and Reporting Program for the Locally Preferred Alternative (Chapter 8 of this Final EIS/EIR). Metro would not allow construction activities to impede safe evacuation of the retail area or access for emergency personnel at any time.

Response to Comment R-BU4-35

Metro does not allow its buses to double park at bus stops, or to park or stop illegally or unsafely. Potential traffic and transit impacts during construction were discussed in Sections 3.3.5.1.1 and 3.3.5.1.2 of the Draft EIS/EIR and this Final EIS/EIR. Mitigation measure number TR-9 in the Mitigation Monitoring and Reporting Program for the Locally Preferred Alternative (Chapter 8 of this Final EIS/EIR) would ensure that shuttle bus drop-off areas at City National Plaza would be provided throughout construction. Mitigation measure numbers TR-12 and TR-13 would ensure that Metro would maintain access to bus stops, minimize temporary bus stop closures, and ensure that any temporarily closed bus stops are relocated to a nearby location to minimize inconvenience. Metro would also coordinate any temporary closures and relocations with other affected bus operators. Similar candidate mitigation measures were also discussed in Sections 3.4.1.1 and 3.4.1.2 of the Draft EIS/EIR. Decking configurations used during construction would be designed to accommodate access to and from the bus stop, shuttle, and taxi drop-off areas.

Response to Comment R-BU4-36

The pocket track is being considered for relocation as a refinement to the Locally Preferred Alternative; however, that determination has not been made at this time. Only locations that would not create new impacts beyond those disclosed in the Draft EIS/EIR and Supplemental EA/Recirculated Draft EIR Sections are under consideration. Locations under consideration would minimize or avoid impacts, or otherwise would not create new impacts. The location will be confirmed during final design. If the pocket track is relocated, the width of the tunnel may not change in order to not preclude construction a 5th and Flower Station in the future. Drainage and utility lines would be protected in place or relocated prior to construction in conjunction with mitigation measure numbers CN-11 and GT-1 in the Mitigation Monitoring and Reporting Program for the Locally Preferred Alternative (Chapter 8) of this Final EIS/EIR. No damage to adjacent structures is anticipated. As discussed in Section 4.7.3.5.1 of the Draft EIS/EIR, Supplemental EA/Recirculated Draft EIR Sections, and this Final EIS/EIR, Metro would conduct a pre-construction survey of all structures within 21 feet of anticipated vibration-producing construction activity to verify the building category (type of construction), structural condition, and to provide a baseline for monitoring construction effects. This mitigation pertains to both geotechnical and vibration impacts. During construction, use of building protection measures such as underpinning, soil grouting, or other forms of ground improvement, use of lower vibration equipment and/or construction techniques, combined with a geotechnical and vibration monitoring program would be used to protect identified sensitive structures. These mitigation measures were included in Sections 4.7.4.1 and 4.9.4.1 of the Draft EIS/EIR and Supplemental EA/Recirculated Draft EIR Sections, Section 4.7.4.2.1 and 4.9.4.2.1 of this Final EIS/EIR, and are included as mitigation measure numbers NV-1 and GT-1 of the Mitigation Monitoring and Reporting Program for the Locally Preferred Alternative (Chapter 8 of this Final EIS/EIR). In the unlikely event that there is damage due to construction, Metro would ensure that any damage caused by construction is repaired to pre-construction survey condition.

Response to Comment R-BU4-37

Metro does not anticipate that the proposed construction staging activities would cause damage to the subterranean structures. As discussed in Section 4.7.3.5.1 of the Draft EIS/EIR, Supplemental EA/Recirculated Draft EIR Sections, and this Final EIS/EIR, Metro would conduct a pre-construction survey of all structures within 21 feet of anticipated vibration-producing construction activity to verify the building category (type of construction), structural condition, and to provide a baseline for monitoring construction effects. This mitigation pertains to both geotechnical and vibration impacts. During construction, use of building protection measures such as underpinning, soil grouting, or other forms of ground improvement, use of lower vibration equipment and/or construction techniques, combined with a geotechnical and vibration monitoring program would be used to protect identified sensitive structures. These mitigation measures were included in Sections 4.7.4.1 and 4.9.4.1 of the Draft EIS/EIR and Supplemental EA/Recirculated Draft EIR Sections, Section 4.7.4.2.1 and 4.9.4.2.1 of this Final EIS/EIR, and are included as mitigation measure numbers NV-1 and GT-1 of the Mitigation Monitoring and Reporting Program for the Locally Preferred Alternative (Chapter 8 of this Final EIS/EIR). In the unlikely event that there is damage due to construction, Metro would ensure that any damage caused by construction is repaired to pre-construction survey condition.

Response to Comment R-BU4-38

Please refer to Response to Comment R-BU4-11, above, and responses to comment letter BU36 in Volume F-2 of this Final EIS/EIR.

The referenced mitigation measures from Section 4.12.1, Cultural Resources – Built Environment, were repeated from Section 4.9, Geotechnical/Subsurface/Seismic/Hazardous Materials. These mitigation measures will be used during construction of the Locally Preferred Alternative to limit ground movement along the entire alignment, not just adjacent to historic resources. Since publication of the Draft EIS/EIR and Supplemental EA/Recirculated Draft EIR Sections, mitigation measures to limit ground movement have been refined and confirmed for the Locally Preferred Alternative, as indicated in Section 4.9.4.2, of this Final EIS/EIR. With implementation of mitigation, impacts associated with ground movement would be reduced to less than significant under CEQA and not substantially adverse under NEPA.

Response to Comment R-BU4-39

Neither the Draft EIS/EIR nor this Final EIS/EIR defers analysis or mitigation. Detailed construction mitigation measures were identified in Section 4.18.4.3 of the Draft EIS/EIR, and have been refined and confirmed to Section 4.18.4.2 and the Mitigation Monitoring and Reporting Program for the Locally Preferred Alternative (Chapter 8) of this Final EIS/EIR. These mitigation measures are adequately specific to address the potential impacts at the referenced properties during construction. The referenced mitigation measures from the Draft EIS/EIR have been included in the Mitigation Monitoring and Reporting Program for the Locally Preferred Alternative (Chapter 8) of this Final EIS/EIR as mitigation measure numbers TR-12 and TR-13. Metro would fulfill its commitment to these mitigation measures by staggering construction activities so as to maintain bus access. Not all construction activities would occur simultaneously. Temporary re-routing of bus service would be necessary, as discussed in Section 3.3.5.1.1 of the Draft EIS/EIR and this Final EIS/EIR. Temporary alternate stops would be established in accordance with mitigation measure numbers TR-12 and TR-13, and all parts of the project area would have continuous access to bus service during construction via the alternate stops. As a result of refinements made since publication of the Supplemental EA/Recirculated Draft EIR Sections, the temporary construction easements at APNs 5151-023-400 and 5151-018-017 have been reduced in size, as shown in Table 4.2-5 and the parcel data table in Appendix 1, Locally Preferred Alternative Drawings, of this Final EIS/EIR. This would allow more curb space for bus stop use along Flower Street during construction. As a key operator of bus service in the area, Metro has determined that the construction mitigation measures pertaining to bus service are feasible, and has committed to their implementation in the Mitigation Monitoring and Reporting Program for the Locally Preferred Alternative (Chapter 8 of this Final EIS/EIR).

Response to Comment R-BU4-40

Based on the analysis presented in the Draft EIS/EIR, Metro believes that the Locally Preferred Alternative is the least impactful build alternative. Consistent with Metro's continuing goal to minimize construction impacts, Metro has refined the Locally Preferred Alternative since publication of the Draft EIS/EIR to reduce cut and cover construction, reduce acquisitions of private property, and further minimize construction impacts, as discussed in Chapter 2, Alternatives Considered, of the Supplemental EA/Recirculated Draft EIR Sections and this Final

EIS/EIR. Chapter 2 also shows other alternatives studied, each with a unique construction scenario on Flower Street. As a result of refinements made since publication of the Supplemental EA/Recirculated Draft EIR Sections, the temporary construction easements at APNs 5151-023-400 and 5151-018-017 have been reduced in size, as shown in Table 4.2-5 and the parcel data table in Appendix 1, Locally Preferred Alternative Drawings, of this Final EIS/EIR.

As stated in Section 3.4.1.4 of the Draft EIS/EIR, Section 3.4.2 of this Final EIS/EIR, and mitigation measure number TR-1 in the Mitigation Monitoring and Reporting Program for the Locally Preferred Alternative (Chapter 8 of this Final EIS/EIR), access to businesses would be maintained during business operating hours throughout construction. This includes the referenced properties.

As discussed in Chapter 5, Section 4(f) Evaluation, of the Draft EIS/EIR and this Final EIS/EIR, Maguire Gardens is a public park space. Since the Regional Connector would be partially funded by the United States Department of Transportation, it is subject to the federal USDOT Act of 1966. Section 4(f) of this act prohibits use of public parks for transportation projects, unless no feasible and prudent avoidance alternative exists. Based on the findings of the Draft EIS/EIR and the Supplemental EA/Recirculated Draft EIR Sections, there are no constraints that would render temporary construction easements across the identified portions of APNs 5151-023-400 and 5151-018-017 not feasible and prudent. As such, the USDOT Act of 1966 would not allow the use of Maguire Gardens as part of the Regional Connector project. Metro has included mitigation measures in the Mitigation Monitoring and Reporting Program to minimize and avoid construction impacts associated with temporary construction easements, as noted in the responses to comments above.

Response to Comment R-BU4-41

The Metro Board of Directors designated the Fully Underground LRT Alternative, without the Flower/5th/4th Street station, as the Locally Preferred Alternative on October 28, 2010. However, the impacts of a station at this location were analyzed in the Draft EIS/EIR as part of the Fully Underground LRT Alternative and the Underground Emphasis LRT Alternative. As indicated in Chapter 2, Alternatives Considered, of the Supplemental EA/Recirculated Draft EIR Sections and this Final EIS/EIR, the Locally Preferred Alternative would not preclude the Flower/5th/4th Street station from being built as a separate future project. Neither the Draft EIS/EIR nor the Supplemental EA/Recirculated Draft EIR Sections identify the Flower/5th/4th Street station as a reasonably foreseeable future development. The Locally Preferred Alternative would be fully functional and would fully meet the purpose and need identified in Chapter 1 of the Draft EIS/EIR regardless of whether the Flower/5th/4th Street station is built. A separate NEPA/CEQA process would be completed as necessary should a future separate Flower/5th/4th Street station project be undertaken.

The proposed Flower/5th/4th Street station would have included a traction power substation (TPSS) in an ancillary room. Construction of the TPSS would not preclude a station from being built in this location as a separate future project. TPSS construction would be consistent with the description of cut and cover construction in Section 4.18.2.5.1 of the Supplemental EA/Recirculated Draft EIR Sections and this Final EIS/EIR.

Response to Comment R-BU4-42

Support for the Flower/5th/4th Street station is noted. As indicated in Chapter 2, Alternatives Considered, of the Supplemental EA/Recirculated Draft EIR Sections and this Final EIS/EIR, the Locally Preferred Alternative would not preclude the Flower/5th/4th Street station from being built as a separate future project. Flower Street from 4th Street to the existing light rail tunnel just south of 6th Street is highly constrained with existing subsurface tie-backs from previous construction projects that would interfere with tunneling activity. Tunneling activities south of 4th Street presents additional issues of removing tie-backs as well as retrieving the tunnel boring machine from under Flower Street at 6th Street which is the narrower part of Flower Street. Tunneling activities using a tunnel boring machine south of 4th Street would not be practicable due to the need to remove tie-backs ahead of the tunnel boring machine. As such, cut and cover construction, as identified in Figure 2-13 of the Draft EIS/EIR and Figure 2-16 of this Final EIS/EIR, is continuing to be pursued in this location. Using tunnel boring machine construction would also create some challenges on the ability of not precluding a 5th and Flower station as the alignment would be changed from a box structure to separate bored tunnels.

Response to Comment R-BU4-43

The referenced language in the introduction to Chapter 2, Alternatives Considered, and in Section 2.3.6.2 has been clarified since publication of the Supplemental EA/Recirculated Draft EIR Sections. The pocket track beneath Flower Street between 5th and 6th Streets would not preclude a possible future station from being constructed beneath Flower Street between 4th and 5th Streets as a separate project. Neither the Draft EIS/EIR nor the Supplemental EA/Recirculated Draft EIR Sections identify the Flower/5th/4th Street station as a reasonably foreseeable future development. The Locally Preferred Alternative would be fully functional and would fully meet the purpose and need identified in Chapter 1 of the Draft EIS/EIR regardless of whether the Flower/5th/4th Street station is built. A separate NEPA/CEQA process would be completed as necessary should a future separate Flower/5th/4th Street station project be undertaken.

Response to Comment R-BU4-44

This language has been corrected in Chapter 2, Alternatives Considered, of this Final EIS/EIR. The traffic lane would be removed from the east side of Flower Street, as shown in Appendix II, Conceptual Drawings for Build Alternatives Analyzed in the Draft EIS/EIR, of the Draft EIS/EIR and this Final EIS/EIR, Appendix R-1, Locally Preferred Alternative Drawings, of the Supplemental EA/Recirculated Draft EIR Sections, and Appendix 1, Locally Preferred Alternative Drawings, of this Final EIS/EIR. The proposed walkway would include a widened sidewalk, landscaping, and potentially additional pedestrian and bicycle facilities. The walkway would be similar in character to the previously proposed Flower/5th/4th Street station entrance, and would occupy the same location. The impacts and mitigation measures associated with lane removal for the station entrance would be the same for the walkway. The Draft EIS/EIR and this Final EIS/EIR analyzed this permanent lane reduction on Flower Street in Section 3.3.5.2.2. The same mitigation measures for this lane reduction identified in Section 3.4.2.2.4 of the Draft EIS/EIR have been included in Section 3.4.2 and the Mitigation Monitoring and Reporting Program for the Locally Preferred Alternative (Chapter 8) of this Final EIS/EIR as mitigation measure numbers TR-6, TR-7, and TR-8. All Regional Connector facilities would comply with the ADA, as discussed in Section 4.15.4.2 of the Draft EIS/EIR. This commitment has also been included in

Section 4.15.4.2.2 and the Mitigation Monitoring and Reporting Program for the Locally Preferred Alternative (Chapter 8) of this Final EIS/EIR as mitigation measure number SS-8.

Response to Comment R-BU4-45

Impacts of the enhanced pedestrian walkway and the associated lane removal would be the same as those analyzed in Section 3.3.5.2.2 of the Draft EIS/EIR and this Final EIS/EIR. The same mitigation measures for this lane reduction identified in Section 3.4.2.2.4 of the Draft EIS/EIR have been included in Section 3.4.2 and the Mitigation Monitoring and Reporting Program for the Locally Preferred Alternative (Chapter 8) of this Final EIS/EIR as mitigation measure numbers TR-6, TR-7, and TR-8. No significant new information has been added to Chapter 3, Transportation Impacts and Mitigation, since publication of the Draft EIS/EIR; therefore, it was not included in the Supplemental EA/Recirculated Draft EIR Sections. As it did in the Draft EIS/EIR, Chapter 3 continues to acknowledge the significant impact under CEQA and adverse effect under NEPA of removing a traffic lane from Flower Street for the Regional Connector in this Final EIS/EIR in Section 3.3.5.2.2. If the Flower/5th/4th Street station is built as a separate future project, the entrance could fit within the enhanced pedestrian walkway with no further lane removals required. The Supplemental EA/Recirculated Draft EIR Sections does not say that further lane removal would be required to accommodate a separate future Flower/5th/4th Street station project.

Response to Comment R-BU4-46

The Draft EIS/EIR, Supplemental EA/Recirculated Draft EIR Sections, and this Final EIS/EIR do not defer analysis or mitigation. Please see Responses to Comments R-BU4-41 through R-BU4-45, above.

Response to Comment R-BU4-47

Since the Regional Connector would be partially funded by the United States Department of Transportation, the Uniform Relocation Assistance and Real Property Acquisition Policies Act of 1970 (Uniform Act) would apply instead of the California Relocation Act, as discussed in Section 4.2.1 of the Draft EIS/EIR, Supplemental EA/Recirculated Draft EIR Sections, and this Final EIS/EIR. Metro would compensate TPG for the temporary construction easements in accordance with the Uniform Act.

In compliance with CEQA, all proposed activities to be performed on temporary construction easements corridor-wide are clearly defined in a bulleted list in Sections 2.4.1 and 4.18.2.3 of the Draft EIS/EIR, Supplemental EA/Recirculated Draft EIR Sections, and this Final EIS/EIR. These activities were included in the analysis performed in Chapters 3 and 4 of the Draft EIS/EIR and this Final EIS/EIR. Metro plans to use the temporary construction easement on TPG property to preserve vehicle and pedestrian access, and to separate pedestrians from street work with K-rail and fences. Mitigation measures to address the impacts of the activities to be performed on the temporary construction easements corridor-wide are identified in Section 4.18.4.3 of the Draft EIS/EIR and have been refined and confirmed as committed mitigation measures in Section 4.18.4.2 and the Mitigation Monitoring and Reporting Program for the Locally Preferred Alternative (Chapter 8) of this Final EIS/EIR.

Response to Comment R-BU4-48

The temporary construction easement identified in the revised right of way plan would be used to preserve vehicular and pedestrian access and for separating pedestrians on the sidewalks from the street work by K-rails and fences.

As stated in Section 3.4.1.4 of the Draft EIS/EIR, Section 3.4.2 of this Final EIS/EIR, and mitigation measure number TR-1 in the Mitigation Monitoring and Reporting Program for the Locally Preferred Alternative (Chapter 8 of this Final EIS/EIR), access to businesses would be maintained during business operating hours throughout construction. In compliance with CEQA, all proposed activities to be performed on temporary construction easements corridor-wide are clearly defined in a bulleted list in Sections 2.4.1 and 4.18.2.3 of the Draft EIS/EIR, Supplemental EA/Recirculated Draft EIR Sections, and this Final EIS/EIR. These activities were included in the analysis performed in Chapters 3 and 4 of the Draft EIS/EIR and this Final EIS/EIR. Since publication of the Supplemental EA/Recirculated Draft EIR Sections, the size of the proposed temporary construction easement on TPG's property has been reduced, consistent with Metro's continuing goal to minimize construction impacts and the use of private property. This reduction is reflected in Table 4.2-5 and the parcel impacts table in Appendix 1, Locally Preferred Alternative Drawings, of this Final EIS/EIR. In addition to a mapped outline of the location of the proposed easement on within the parcel, Table 4.2-5 provides maximum square footage. Metro plans to use the reduced temporary construction easement on TPG property to preserve vehicle and pedestrian access, and to separate pedestrians on the sidewalks from street work by K-rail and fences. Mitigation measures identified in Section 4.18.4 of the Draft EIS/EIR and refined and confirmed in Section 4.18.4.2 and the Mitigation Monitoring and Reporting Program for the Locally Preferred Alternative (Chapter 8) of this Final EIS/EIR indicate how Metro would reduce or avoid construction impacts.

Response to Comment R-BU4-49

As stated in Section 3.4.1.4 of the Draft EIS/EIR, Section 3.4.2 of this Final EIS/EIR, and mitigation measure number TR-1 in the Mitigation Monitoring and Reporting Program for the Locally Preferred Alternative (Chapter 8 of this Final EIS/EIR), access to businesses would be maintained during business operating hours throughout construction. It is Metro's goal to minimize disruption and inconvenience stemming from construction activities. Refinements to the Locally Preferred Alternative have reduced the size of the proposed temporary construction easement on TPG's property to 3,960 square feet, as shown in Table 4.2-5 and the parcel data table in Appendix 1, Locally Preferred Alternative Drawings, of this Final EIS/EIR. Metro plans to use the temporary construction easement on TPG property to preserve vehicle and pedestrian access, and to separate pedestrians from street work with K-rail and fences. It is unlikely that this type of temporary activity on the easement, intended to preserve safe pedestrian access to the property, would cause substantial disruption. Mitigation measures to address the impacts of the activities to be performed on the temporary construction easements corridor-wide are identified in Section 4.18.4.3 of the Draft EIS/EIR and have been refined and confirmed as committed mitigation measures in Section 4.18.4.2 and the Mitigation Monitoring and Reporting Program for the Locally Preferred Alternative (Chapter 8) of this Final EIS/EIR. Construction staging areas have been identified on portions of both of the non-park plazas in the vicinity of 5th and Flower Streets (APNs 5151-023-400 and 5151-018-017), as shown in Table 4.2-5 and the parcel data table in Appendix R-1, Locally Preferred Alternative Drawings, of the

Supplemental EA/Recirculated Draft EIR Sections and Appendix 1, Locally Preferred Alternative Drawings, of this Final EIS/EIR, and Table 4.2-5 and Appendix II, Conceptual Drawings for Build Alternatives Analyzed in the Draft EIS/EIR, of the Draft EIS/EIR and this Final EIS/EIR. All other properties along the alignment in the vicinity of 5th and Flower Streets are occupied by aboveground structures or precluded from use by Section 4(f) of the USDOT Act of 1966, thus rendering them unsuitable for temporary construction easements.

Response to Comment R-BU4-50

Metro will continue its ongoing coordination with TPG throughout the planning, design, and construction phases of the project, and will involve the construction contractor as needed to ensure effective implementation of the mitigation measures in the Mitigation Monitoring and Reporting Program for the Locally Preferred Alternative (Chapter 8 of this Final EIS/EIR). Metro recognizes the importance of Flower and 5th Streets to the operation of TPG's properties. It is Metro's goal to minimize construction impacts, as demonstrated by the extent of measures included in the Mitigation Monitoring and Reporting Program, which include adequate mitigation measures to reduce or avoid significant environmental impacts under CEQA and adverse effects under NEPA. As stated in Section 3.4.1.4 of the Draft EIS/EIR, Section 3.4.2 of this Final EIS/EIR, and mitigation measure number TR-1 in the Mitigation Monitoring and Reporting Program for the Locally Preferred Alternative (Chapter 8 of this Final EIS/EIR), access to businesses would be maintained during business operating hours throughout construction.

Response to Comment R-BU4-51

Flower Street from 4th Street to the existing light rail tunnel just south of 6th Street is highly constrained with existing subsurface tie-backs from previous construction projects that would interfere with tunneling activity. Tunneling activities using a tunnel boring machine south of 4th Street would not be practicable due to the need to remove tie-backs ahead of the tunnel boring machine. Tunnel boring would also preclude a future Flower/5th/4th Street station due to the separate bored tunnels instead of a box structure.

As such, cut and cover construction, as identified in Figure 2-13 of the Draft EIS/EIR and Figure 2-16 of this Final EIS/EIR, is continuing to be pursued in this location. As stated in Section 3.4.1.4 of the Draft EIS/EIR, Section 3.4.2 of this Final EIS/EIR, and mitigation measure number TR-1 in the Mitigation Monitoring and Reporting Program for the Locally Preferred Alternative (Chapter 8 of this Final EIS/EIR), access to businesses would be maintained during business operating hours throughout construction.

Response to Comment R-BU4-52

The Metro Board of Directors designated the Fully Underground LRT Alternative, without the Flower/5th/4th Street station, as the Locally Preferred Alternative on October 28, 2010. As indicated in Chapter 2, Alternatives Considered, of the Supplemental EA/Recirculated Draft EIR Sections and this Final EIS/EIR, the Locally Preferred Alternative would not preclude the Flower/5th/4th Street station from being built as a separate future project. As noted in Response to Comment R-BU4-51 above, tunnel boring machine construction would not be practicable due to the presence of tie-backs in the area. This segment of the alignment is identified for cut and cover construction in Figure 2-13 of the Draft EIS/EIR, Figure 2-14 of the Supplemental EA/Recirculated Draft EIR Sections, and Figure 2-16 of this Final EIS/EIR. As shown in Figure 2-

14 of the Supplemental EA/Recirculated Draft EIR Sections and Figure 2-16 of this Final EIS/EIR, Metro has reduced the amount of cut and cover construction required on Flower Street since publication of the Draft EIS/EIR. Cut and cover would no longer be needed between 3rd and 4th Streets.

Response to Comment R-BU4-53

Decking of the construction area is a necessary component of cut and cover construction to maintain vehicular and pedestrian access throughout construction. Concrete deck panels would be used as a temporary deck for vehicles and pedestrians during cut and cover operations on Flower Street. Preference for deck panels to be installed at existing grade level is noted.

Any decking configurations would require construction of ADA-compliant ramps and accesses as well as modifications to vehicular access points to the garages and driveway along Flower Street, as indicated in Section 4.15.4.2.1 of this Final EIS/EIR and Section 4.18.2.5.1 of the Supplemental EA/Recirculated Draft EIR Sections and this Final EIS/EIR. Any decking configurations would be designed to safely accommodate pedestrians, the undercarriage and overhead clearances of vehicles using the driveways, garages, and loading docks as indicated in the same sections.

Response to Comment R-BU4-54

Please refer to Response to Comment R-BU4-11, above.

Response to Comment R-BU4-55

As shown in Figure 2-14 of the Supplemental EA/Recirculated Draft EIR Sections and Figure 2-16 of this Final EIS/EIR, the Locally Preferred Alternative would not involve tunneling adjacent to the referenced TPG properties. These segments of the alignment would be constructed using cut and cover construction. Metro does not anticipate that the proposed construction would cause damage to adjacent structures. As discussed in Section 4.7.3.5.1 of the Draft EIS/EIR, Supplemental EA/Recirculated Draft EIR Sections, and this Final EIS/EIR, Metro would conduct a pre-construction survey of all structures within 21 feet of anticipated vibration-producing construction activity to verify the building category (type of construction), structural condition, and to provide a baseline for monitoring construction effects. This mitigation pertains to both geotechnical and vibration impacts. During construction, use of building protection measures such as underpinning, soil grouting, or other forms of ground improvement, use of lower vibration equipment and/or construction techniques, combined with a geotechnical and vibration monitoring program would be used to protect identified sensitive structures. These mitigation measures were included in Sections 4.7.4.1 and 4.9.4.1 of the Draft EIS/EIR and Supplemental EA/Recirculated Draft EIR Sections, Section 4.7.4.2.1 and 4.9.4.2.1 of this Final EIS/EIR, and are included as mitigation measure numbers NV-1 and GT-1 of the Mitigation Monitoring and Reporting Program for the Locally Preferred Alternative (Chapter 8 of this Final EIS/EIR). Detailed construction mitigation measures are also identified in Section 4.18.4.3 of the Draft EIS/EIR, and have been refined and confirmed in Section 4.18.4.2 and the Mitigation Monitoring and Reporting Program for the Locally Preferred Alternative (Chapter 8) of this Final EIS/EIR. In the unlikely event that there is damage due to construction, Metro would ensure that any damage caused by construction is repaired to pre-construction survey condition.

Response to Comment R-BU4-56

Since publication of the Supplemental EA/Recirculated Draft EIR Sections, the size of the proposed temporary construction easement on TPG's property has been reduced, consistent with Metro's continuing goal to minimize construction impacts and the use of private property. This reduction is reflected in Table 4.2-5 and the parcel impacts table in Appendix 1, Locally Preferred Alternative Drawings, of this Final EIS/EIR. In compliance with CEQA, all proposed activities to be performed on temporary construction easements corridor-wide are clearly defined in a bulleted list in Sections 2.4.1 and 4.18.2.3 of the Draft EIS/EIR, Supplemental EA/Recirculated Draft EIR Sections, and this Final EIS/EIR. These activities were included in the analysis performed in Chapters 3 and 4 of the Draft EIS/EIR and this Final EIS/EIR. Metro plans to use the temporary construction easement on TPG property to preserve vehicle and pedestrian access, and to separate pedestrians from street work with K-rail and fences. Concrete deck panels would be used as a temporary deck for vehicles and pedestrians during cut and cover operations on Flower Street. Preference for deck panels to be installed at existing grade level is noted.

Any decking configurations would require construction of ADA-compliant ramps and accesses as well as modifications to vehicular access points to the garages and driveway along Flower Street, as indicated in Section 4.15.4.2.1 of this Final EIS/EIR and Section 4.18.2.5.1 of the Supplemental EA/Recirculated Draft EIR Sections and this Final EIS/EIR. Any decking configurations would be designed to safely accommodate pedestrians, the undercarriage and overhead clearances of vehicles using the driveways, garages, and loading docks as indicated in the same sections.

Response to Comment R-BU4-57

The construction traffic impacts on Flower Street were adequately analyzed in Section 3.3.5.1.2 of the Draft EIS/EIR and this Final EIS/EIR. The permanent reduction of traffic lanes on Flower Street is also adequately analyzed in Section 3.3.5.2.2 of the Draft EIS/EIR and this Final EIS/EIR. Since no significant new information regarding these impacts resulted from refinements made to the Locally Preferred Alternative since publication of the Draft EIS/EIR, no repetition of this discussion was required in the Supplemental EA/Recirculated Draft EIR Sections. Traffic circulation analysis was performed using the methodology presented in Section 3.1.2 of the Draft EIS/EIR and this Final EIS/EIR. As indicated in Section 3.3.5.2.2 of the Draft EIS/EIR and this Final EIS/EIR, significant increases in delay would occur at one intersection during the AM peak hour, and three intersections during the PM peak hour. Sufficient feasible mitigation measures are included in the Draft EIS/EIR to reduce these impacts below the level of significance except at one intersection during the AM peak hour. As shown in Figure 3-16 of the Draft EIS/EIR and this Final EIS/EIR, the 4th and Flower Streets intersection would continue to experience a significant decrease in performance after mitigation during the AM peak hour. Mitigation measures to address both construction and operation traffic impacts are presented in Sections 3.4.1.2 and 3.4.2.2.4 of the Draft EIS/EIR, and have been refined and confirmed in Section 3.4.2 and the Mitigation Monitoring and Reporting Program for the Locally Preferred Alternative (Chapter 8) of this Final EIS/EIR.

Response to Comment R-BU4-58

Metro will coordinate with the community, including TPG, regarding construction activities through the Regional Connector Community Leadership Council, as provided in mitigation measure numbers CN-4 and CN-5 in the Mitigation Monitoring and Reporting Program for the Locally Preferred Alternative (Chapter 8 of this Final EIS/EIR). It is Metro's goal to provide timely information to stakeholders.

Since publication of the Supplemental EA/Recirculated Draft EIR Sections, the size of the proposed temporary construction easement on TPG's property has been reduced, consistent with Metro's continuing goal to minimize construction impacts and the use of private property. This reduction is reflected in Table 4.2-5 and the parcel impacts table in Appendix 1, Locally Preferred Alternative Drawings, of this Final EIS/EIR. The proposed activities to be performed on temporary construction easements corridor-wide are discussed in Sections 2.4.1 and 4.18.2.3 of the Draft EIS/EIR, Supplemental EA/Recirculated Draft EIR Sections, and this Final EIS/EIR. Metro plans to use the temporary construction easement on TPG property to preserve vehicle and pedestrian access, and to separate pedestrians from street work with K-rail and fences.

Response to Comment R-BU4-59

Thank you. Metro also looks forward to continued coordination with TPG throughout the project process.

August 29, 2011

Mr. Diego Cardoso
Executive Officer, Countywide Planning and Development
METRO
One Gateway Plaza
Los Angeles, CA 90017

Dear Mr. Cardoso:

On behalf of the Little Tokyo Community Council, Little Tokyo Business Association and the Little Tokyo Business Improvement District, we take this opportunity to reiterate in writing priority and outstanding concerns of the Little Tokyo community related to the Regional Connector transit project, and to ensure inclusion of our concerns as public commentary. 1

The refined alignment does not fully mitigate impacts of four years of construction to small independent businesses and community/cultural institutions that define the cultural character of Little Tokyo. Loss of business and patronage due to perceived or real accessibility into the Little Tokyo area will negatively impact these entities that operate within modest margins of profitability or depend upon patronage and donations. 2

We have identified key areas previously and are dismayed that they were not specifically addressed in the environmental document: Community Marketing, a Business Interruption Fund, a Community Valet Parking System and a Community Shuttle Bus Service System. We note that the Environmental Assessment and final environmental documents do not address anything beyond the draft environmental documents in this and other areas of concern to our business entities and non-profit community organizations. We are prepared to provide specifics for the Community Marketing, Business Interruption Fund, the Community Valet Parking System and the Community Shuttle Bus Service System in order to support implementation. 3

The structure and responsibilities of the Regional Connector Community Resource Council (RCCRC) were also unaddressed in the environmental document. Previous timeline had announced formation of the Council in early summer 2011. 4

We are anxious to move forward the marketing, business interruption fund, and parking/shuttle bus projects, as well as the formation of the RCCRC, and look forward to discussing all these matters with you in the near future. 5

Sincerely,

Chair
Little Tokyo Community Council

President
Little Tokyo Business Association
Little Tokyo Business Improvement District

R-BU5

Responses to Comments from the Little Tokyo Business Association and Little Tokyo Business Improvement District; Little Tokyo Community Council, Liu, Wilson; Okamoto, Mike

Response to Comment R-BU5-1

Metro appreciates this input from the Little Tokyo Community Council and the Little Tokyo Business Improvement District. Responses to the identified concerns are provided in Responses to Comments R-BU5-2 through R-BU5-5 below.

Response to Comment R-BU5-2

Metro recognizes the importance of small independent businesses and community/cultural institutions in Little Tokyo. Metro has developed the Mitigation Monitoring and Reporting Program for the Locally Preferred Alternative (Chapter 8 of this Final EIS/EIR) with input from the Little Tokyo Working Group, Little Tokyo Community Council, and Little Tokyo Business Improvement District. Metro and the Federal Transit Administration (FTA) are fully committed to all mitigation measures in the Mitigation Monitoring and Reporting Program. The Mitigation Monitoring and Reporting Program includes measures to address and minimize loss of business and patronage, and to maintain access to businesses at all times during operating hours. These mitigation measures, developed with input from the community, would reduce the impacts below the level of significance under CEQA and to a not substantially adverse level under NEPA.

Response to Comment R-BU5-3

These concerns are addressed in the Environmental Justice section, Section 4.17 of the Draft EIS/EIR and this Final EIS/EIR. It should be noted that the Environmental Justice section was not included in the Supplemental EA/Recirculated Draft EIR Sections because it contains no significant new information beyond what was included in the Draft EIS/EIR. The Mitigation Monitoring and Reporting Program in this Final EIS/EIR incorporates the specific mitigation measures for the Locally Preferred Alternative that address the issues raised in this comment, such as alternative parking services and targeted marketing services. Both Section 4.17 and the Mitigation Monitoring and Reporting Program for the Locally Preferred Alternative (Chapter 8) are included in this Final EIS/EIR and contain the specific mitigation measures to address these issues. Metro looks forward to continued coordination with the Little Tokyo community regarding the implementation of the Mitigation Monitoring and Reporting Program mitigation measures.

Response to Comment R-BU5-4

The Regional Connector Community Leadership Council (RCCLC) formation is included in the Mitigation Monitoring and Reporting Program for the Locally Preferred Alternative (Chapter 8 of this Final EIS/EIR) as mitigation measure number CN-6. Metro will establish the RCCLC following FTA's issuance of a Record of Decision.

Response to Comment R-BU5-5

Metro looks forward to continued coordination with the Little Tokyo community regarding the implementation of the Mitigation Monitoring and Reporting Program mitigation measures. This coordination, including formation of the RCCLC and further discussions regarding implementation of mitigation measures, would occur following FTA's issuance of a Record of Decision.

Re: Comments on the Regional Connector Transit Corridor Supplemental Environmental Assessment/Recirculated Sections of the Draft Environmental Impact Statement/Environmental Impact Report and the Regional Connector Transit Corridor Project Draft Environmental Impact Statement/Environmental Impact Report

Dear Ms. Roybal Saltarelli:

This office represents Hines Interest Limited Partnership, the owner (the "Owner") of Citigroup Center, the 48-story skyscraper located at 444 S. Flower Street, Los Angeles, California 90017 (the "Property"). On behalf of the Owner, this letter constitutes comments on the *Regional Connector Transit Corridor Supplemental Environmental Assessment/Recirculated Sections of the Draft Environmental Impact Statement/Environmental Impact Report* ("Draft EIR") as well as the *Regional Connector Transit Corridor Project Draft Environmental Impact Statement/Environmental Impact Report* ("Original DEIR") (collectively, the "DEIR"). 1

The Property is immediately adjacent to the proposed Regional Connector light rail transit ("LRT") line (the "Project"). The Project and all of the construction alternatives include a construction staging area that would destroy the Property's street-level open air plaza (the "Plaza") during the multi-year construction timeline of 2014 to 2019. See Original DEIR p. 4-362, Draft EIR p. 4.7-12.

The Owner supports improved access and traffic conditions in the area that may eventually occur with the implementation of the Project, but cannot support Metro's proposed take and destruction of the Plaza and replacement of it for several years with construction noise, fumes, increased air pollution, vibration, and other hazards associated with potentially contaminated soil removal and blocked emergency ingress and egress into the Property, none of which has been adequately analyzed or mitigated in the DEIR. While the Owner appreciates the commitments Metro staff made to dramatically 2 3

DLA PIPER

reduce the size of the temporary construction easement and construction staging area on or adjacent to the Property (the "Revised Construction Design") at the August 22, 2011 meeting,[1] placing a construction staging area in the two easterly lanes of Flower Street adjacent to the Plaza, while substantially better than the destruction of the Plaza described in the DEIR, will still have significant and unavoidable environmental impacts that have not been adequately analyzed or mitigated.[2] As such, because it is uncertain whether the Revised Construction Design and additional mitigation measures will become part of the Project, the Owner has no choice but to comment on the Revised Construction Design and the Project analyzed and described in the DEIR that would cause significant new construction traffic, noise, air, and aesthetic impacts, among others.

3 cont'd

4

The approval process for the Project must comply with the California Environmental Quality Act ("CEQA") which requires an applicant not only to disclose environmental impacts to the public, but also to mitigate the significant impacts and consider alternatives that can reduce or eliminate the significant environmental impacts. As a general matter, in several areas critically important to the Owner, Project impacts have not been adequately analyzed or mitigated in the DEIR. In fact, the negative environmental impacts would be significantly more severe than disclosed in the DEIR.

Consequently, unless Metro irrevocably commits to the Revised Construction Design presented at the August 22, 2011 meeting and agrees to additional enforceable mitigation measures to reduce the construction noise, vibration, air quality and hazard impacts, the Owner requests recirculation of the Draft EIR pursuant to Section 15088.5 of the California Code of Regulations ("CCR") because not only has the public been deprived of a meaningful opportunity to comment on the Project's impacts, it is impossible for the public and decision makers to understand the true environmental impacts of the Project.

5

1. Legal Inadequacies

Pursuant to Public Resources Code Section 21177(a) which allows public comment on the Project prior to the close of the public hearing, the following is a list of the most significant DEIR legal inadequacies.

6

[1] The meeting between the Metro and the Owner occurred to address Project impacts on the Property. Meeting attendees included Ginny-Marie Brideau, Ann Kerman, John S. Prizner, Jr., Dolores M. Roybal Saltarelli, Martha Welborne, Tracey Chavira, Leia Jensen, Jim Bonham, Diego Cardoso, and Girish Roy.
[2] See the attached "Construction Area Plan Structure Cut and Cover" Site Plan depicting the reduced Temporary Construction Easement and reduced Construction Staging Area that was presented at the 8/22/11 meeting.

DLA PIPER

a. Noise Analysis Inadequate

The Project would create substantial temporary or periodic increases in ambient noise levels in the vicinity of the Property above levels existing without the Project. See CEQA Guidelines Appendix G Section XII(d). There is inadequate analysis of these significant environmental impacts. 7

i. The Draft EIR Does Not Adequately Analyze The Noise Impacts Of Construction

The Draft EIR states that construction noise impacts on the Property would be less than significant, even though a construction staging area would be located on the Property or immediately in front of the Property. See Draft EIR p. 10-18. There would be no setback separating the construction staging area and noise and vibration generating activities from the building entrance, offices and restaurants located on the Property. According to p. 2-36 of the Draft EIR, "construction staging areas are locations needed for: equipment storage; construction materials delivery and storage; equipment assembly; materials production; dewatering activities; access roads; construction worker parking; temporary trailer offices; demolition staging; removal of excavated materials; other related activities during the construction period." Thus, these noise and vibration generating activities must be assumed to occur immediately adjacent to the sensitive receptors at the building entrance, offices and restaurants on the Property, whether for the construction staging area on the Property or for the construction staging area proposed in the Revised Construction Design. The analysis in the DEIR only examined noise impacts at 50 feet from the noise source when in fact the impact will occur much closer than analyzed. Draft EIR pp. 4.7-15, 4.7-23 and 4.7-31. With no separation among the noise generating activities of bulldozers, dewatering, and other construction activities and the sensitive receptors both on the Property and across the street at the Bonaventure hotel, the noise impacts have not been adequately disclosed, analyzed and/or mitigated. For example, bulldozers would create 85 dBA of noise at 50 feet from the noise source. Draft EIR p. 4.7-15. As the construction staging area is on the Plaza or in the Flower Street right-of-way pursuant to the Revised Construction Design, bulldozers and other construction equipment would operate much closer than 50 feet to sensitive uses on the Property. Noise impacts will not only be worse than analyzed; when multiple pieces of construction equipment are operated together, they will greatly exceed the thresholds of significance (even though the DEIR does not appear to have analyzed the construction noise impact of multiple pieces of equipment operating simultaneously). In addition, increased noise from 8

DLA PIPER

construction haul trucks does not appear to have been analyzed. Thus, new significant and unavoidable impacts may occur. 8 cont'd

Because the extent of the significant impacts has been greatly underestimated, substantial evidence does not support the conclusion that "consistency with the goals of the applicable local ordinances and implementation of best management practices would ensure that noise and vibration levels associated with construction of the Locally Preferred Alternative ("LPA") would not result in a significant impact." Draft EIR p. 10-18. As described later in this letter, it will be impossible for the Project to be consistent with the Los Angeles Municipal Code ("LAMC") regarding noise generating activities. If a Project with a construction schedule lasting five years, affecting thousands of sensitive receptors along a 1.9 mile route with massive excavation does not have a significant construction noise impact, then it would be highly unlikely that any Project would ever have a significant construction noise impact. Because this significant noise impact was not disclosed, nor was there any analysis as to how the mitigation proposed would reduce impacts to less-than-significant, CEQA requires revision and recirculation of the EIR. See CEQA Guidelines Appendix G Section XII(a). 9

ii. City of Los Angeles Significance Thresholds and the LAMC

The DEIR does not place any standard on the acceptable noise limit in the City of Los Angeles. The Draft EIR states that "neither CEQA nor the City of Los Angeles provides quantitative thresholds for a substantial noise impact..." Draft EIR p. 4.7-7. To the contrary, the *LA CEQA Thresholds Guide* states that a project would normally have a significant impact on noise levels from construction if:

> "Construction activities lasting more than one day would exceed existing ambient exterior noise levels by 10 dBA or more at a noise sensitive use; Construction activities lasting more than 10 days in a three month period would exceed existing ambient exterior noise levels by 5 dBA or more at a noise sensitive use; or Construction activities would exceed the ambient noise level by 5 dBA at a noise sensitive use between the hours of 9:00 p.m. and 7:00 a.m. Monday through Friday, before 8:00 a.m. or after 6:00 p.m. on Saturday, or at anytime on Sunday."

10

These are existing significance thresholds for construction noise in the City of Los Angeles, and it is difficult to understand why Metro has not utilized these City of Los Angeles CEQA thresholds when the Project is in the center of the City. There is no justification for why Appendix G of the State CEQA

DLA PIPER

Guidelines and the *LA City CEQA Thresholds* were not followed for noise or other environmental thresholds. There are likely to also be other significant environmental impacts that have not been disclosed or analyzed. The *LA CEQA Thresholds Guide* should be followed because the Project is within the City of Los Angeles, a responsible agency. It must approve a number of discretionary entitlements to allow the Project, such as a haul route and street vacations. If these thresholds were followed, there would be a number of new significant construction noise environmental impacts because construction activities would last more than one day and would exceed ambient exterior noise levels by 10 dBA or more at a noise sensitive use (such as the Plaza and the Bonaventure hotel); construction activities would last more than 10 days in a three month period and would exceed existing ambient exterior noise levels by 5 dBA or more at a noise sensitive use; and construction activities would exceed the ambient noise level by 5 dBA at a noise sensitive use after 9 p.m. on weekdays and during the weekend prohibited hours. See *LA CEQA Thresholds Guide* p. I.1-3. DEIR Appendix FF ("Construction Impacts") lists these thresholds of significance for noise impacts and it is unclear why the body of the DEIR ignores the analysis of these thresholds.

10 cont'd

In addition, the City of Los Angeles has standards both in the LAMC as well as the General Plan specifying when noise is clearly unacceptable, and these are omitted from the DEIR. The LAMC states that "it is hereby declared to be the policy of the City to prohibit unnecessary, excessive and annoying noise from all sources subject to its police power. At certain levels noises are detrimental to the health and welfare of the citizenry and in the public interests shall be systematically proscribed." See LAMC Section 111.00. The high noise level of construction as it relates to the Property and the Plaza, lasting several years, will be excessive and annoying and therefore prohibited by the LAMC. And since the noise levels in the DEIR underestimate the noise levels that will be heard by sensitive receptors (people will be much closer to noise sources than analyzed in the DEIR), the significant impacts will be much worse than analyzed. The EIR fails to disclose this significant impact.

11

iii. Noise and Vibration Attenuation Mitigation Measures Are Inadequate

While the Draft EIR states that "construction would be consistent with the goals of Section 41.40(a) of the Los Angeles Municipal Code," there is nothing to indicate that compliance with goals would make the significant construction noise impacts less than significant. Draft EIR p. 4.7-15. It would be impossible for construction to occur in compliance with LAMC Sec. 41.40(a)'s preclusion of work

12

DLA PIPER

between 9 p.m. and 7 a.m. (Draft EIR p. 4.7-30) since the Draft EIR on p. 4.18.2-6 states that "based on experience with the cut and cover construction of the two underground stations on the Metro Gold Line Eastside Extension, after the shoring system was in place, decking installation occurred in only several weekends with non-stop activity from Friday at 5:00 PM to Monday morning at 6:00 AM with community and local agency approval. Similar progressive staging could be performed for the Regional Connector project..." This internal inconsistency demonstrates that the mitigation measure cannot mitigate the impact, rendering this a new significant and unavoidable impact. Other mitigation measures discussed in the DEIR do not indicate how construction noise levels are brought to a level that is less-than-significant. While Best Management Practices ("BMPs") are welcome, there is no indication in the Draft EIR how these BMPs would reduce the impact to less-than-significant. *Id.* Merely stating that a mitigation measure reduces the impact to less-than-significant is insufficient when there is no substantial evidence to support the claim that the mitigation measure will reduce the impact to less-than-significant. Punting the analysis on the applicable level of noise makes it impossible for the public to know whether there is a significant impact or how much of a noise reduction is necessary to reduce the impact to less-than-significant. Even if one were to actually believe that these vague measures would be enforceable and implemented, it is uncertain how much these measures would reduce noise heard by sensitive receptors and how they would attenuate noise to a less-than-significant level, especially considering that the construction staging areas will produce noise generating activities much closer to people than assumed in the EIR, including those across the street at the Bonaventure hotel.

12 cont'd

Claiming that there would be a Worksite Traffic Control Plan and a Construction Mitigation Program without providing any details as to how the significant and unavoidable environmental impacts would be reduced, or providing standards for reducing the significant environmental impacts (Original DEIR p. 3-55) does not satisfy CEQA's minimum legal requirements. This constitutes deferred analysis that does not meet the minimum requirements of *Sacramento Old City Association v. City Council* (1991) 229 Cal.App.3d 1011 and *California Native Plant Society v. City of Rancho Cordova* (2009) 172 Cal.App.4th 603. The existing construction mitigation measures are unenforceable and infeasible as they include language such as "to the extent practical," or "when feasible" without a binding obligation to mitigate. Original DEIR p. 3-55 and Draft EIR p. 4.7-21 to 22. If a mitigation measure turns out to not be practical or infeasible, it does not satisfy its legal obligation to mitigate a significant environmental impact.

13

DLA PIPER

Consequently, the vibration mitigation measures on p. 4.7-21 of the Draft EIR should remove the words "where feasible." If it is not feasible, it is not legally adequate mitigation. 13 cont'd

The construction noise mitigation measures on p. 4.7-42 need to be required whether or not there is a noise complaint. It is difficult to understand why a noise complaint should trigger monitoring and the implementation of mitigation measures to reduce significant impacts. CEQA does not make it the responsibility of the Owner and other members of the public to ensure that the Project does not violate the law. Since the worst case (and most probable likelihood) is that noise will exceed FTA (and City) thresholds, the mitigation measures on Draft EIR p. 4.7-42 cannot contain any complaint contingency to trigger their applicability. 14

At the very least, additional mitigation measures should be added requiring (1) a sound barrier wall at ground level around the perimeter of the construction staging areas around/adjacent to the Property such that it attenuates noise to a minimum of 20 dBA; and (2) where health and safety are not compromised, additional temporary sound walls to be used in conjunction with noise intensive construction equipment that has limited mobility while in use (i.e. jackhammers, compressors, etc.). These sound barriers and other noise attenuation features must be aesthetically pleasing. Further, to reduce noise impacts at the Property, there should be a break in heavy noise-generating construction activities during the lunch hour. Construction activity that generates a significant amount of noise should be scheduled for weekends, evenings and early mornings. 15

iv. Construction Vibration Impacts Are Significant

The Project involves a construction staging area on the Plaza adjacent to restaurants, the Property's skyscraper, and/or in the right of way in front of the Property. While the Property involves a reinforced steel structure and is within the FTA Vibration Damage Criteria I category, vibration damage may occur if a large bulldozer or caisson drilling occurs within eight feet of the Property's buildings. Draft EIR p. 4.7-7. The DEIR failed to analyze impacts of multiple vibration causing events occurring simultaneously. If equipment operates simultaneously there would need to be a greater separation between the construction equipment and vibration-sensitive uses on the Property since there would be greater impacts than analyzed. As this standard is based on *damage* to a building, the Draft EIR does not make any sense when it says that bulldozer use near buildings would remain infrequent and therefore, a vibration impact based on damage to a building would be less than significant. Damage may 16

DLA PIPER

occur with infrequent events (and in any event, the DEIR does not provide a mitigation measure reducing the frequency of use of vibration-causing equipment in close proximity to buildings affected by the Project). According to the Draft EIR, the threshold is based on the vibration that may cause damage without specifying any frequency of events or simultaneous construction activities. *Id.* Thus, whether or not vibration events are infrequent, there may still be damage to the Property as a result of the proposed construction staging area, and this was not disclosed in the DEIR. In addition, with regard to the threshold regarding general assessment of vibration impacts (i.e., vibration annoyance) that depends on frequency of events, while the standard is listed on p.4.7-6 of the Draft EIR, there is no analysis as to whether the general assessment (i.e. annoyance) threshold would be exceeded for construction. There is no analysis of (1) the maximum amount of vibration that would occur or its frequency; (2) why there would be "a 10 dBA reduction in vibration for coupling to building foundation loss"; and (3) why this would result in a less than significant impact. Draft EIR p. 4.7-17. Consequently, due to all of the construction staging activities that would occur on the Property or nearby that would be annoying to sensitive receptors on the Property, and no mitigation measures or other Project features committing Metro to not use vibration-causing machinery within a distance that may cause damage to the Property's buildings, there may be new significant vibration impacts that have not been disclosed.

16 cont'd

17

b. Air Pollution Analysis Inadequate

i. Hazards Analysis Necessary

The DEIR states that soil removal may involve contaminated soil and "testing of materials would be required prior to transportation." Draft EIR p. 4.18.2-4. It is unknown whether the soil is contaminated with harmful pollutants and whether the excavation, storage, removal and hauling of these unknown contaminants, as well as the air-borne exposure of these contaminants through dewatering will pose a threat to sensitive receptors immediately adjacent to the construction staging and cut and cover areas. CEQA does not allow this deferral of analysis and mitigation. If there is contamination, what will be the hazard posed to the thousands of people who are daily on the Property, let alone adjacent to other proposed construction staging areas and cut and cover construction areas? While the DEIR analyzes Localized Significance Thresholds ("LST"), Original DEIR p. 4-75, for example, it has not analyzed the health risks of the potentially hazardous soil and water that would be brought into close proximity to thousands of people daily. A Health Risk Assessment is absolutely mandatory not just to analyze

18

DLA PIPER

construction equipment emissions, but also emissions associated with the removal of potentially hazardous soil and water, considering the high volume of people who would be exposed on a daily basis, for years, to excavation and removal. Appendix FF to the original DEIR claims that the Construction Health Risk Assessments demonstrate a less than significant impact (pp. 79 and 93), however, Tables 5-8 and 5-11 appear to show thresholds exceeded. If the threshold of significance is exceeded, there would be a significant impact. At the very least, the DEIR needs to redo the Health Risk Assessment to better explain why there is no significant impact, if that is the case, once it takes into account the potentially hazardous materials present in the soil and groundwater. Mitigation measures are also required to address the excavation, storage and removal of potentially contaminated soil. Merely indicating that hazardous materials will be removed to certain landfills does not protect the public prior to the disposal of that hazardous waste to appropriate landfills, and especially if the excavated hazardous waste is stored in the Plaza or adjacent to the Property. Draft EIR p. 4.18.2-4. The EIR fails to adequately analyze and mitigate the potential impacts from air-borne hazards associated with the construction of the Project.

18 cont'd

19

(a) Inadequate Analysis Of Release Or Transport Of Hazardous Materials

Original DEIR p. 4-139 states that "indirect impacts could occur from the accidental release of hazardous materials during the transport of soil or other media contaminated with hazardous materials to a disposal facility located away from the project area during construction." CEQA Guidelines Appendix G Sections VIII(b), and (c) require analysis of whether the Project would create a significant hazard to the public or the environment through reasonably foreseeable upset and accident conditions involving the release of hazardous materials into the environment and whether the Project would emit hazardous emissions or handle hazardous or acutely hazardous materials, substances, or waste within 1/4 mile of a school, respectively. But there was no analysis of the very real impact that may result from the excavation and transport of hazardous materials from the Project site, including construction staging areas, or whether schools are located within 0.25 miles of the Project's hazardous materials. While Original DEIR p. 4-145 lists a requirement for a Contaminated Soil/Groundwater Management Plan in case hazardous materials are found within the Project site, it impermissibly defers analysis. As the construction staging area is on the Plaza, information regarding the "procedures for the proper handling, storage, transport, and disposal of contaminated soil and/or groundwater, in consultation with regulatory

20

DLA PIPER

agencies" cannot be deferred until some future time. Original DEIR p. 4-145. The Owner and the public have a right to know now whether hazardous materials will be stored on the Property and what steps will be taken to preserve public health. Similarly, while the Worker Health and Safety Plan listed on p. 4-145 of the Original DEIR is a step in the right direction to protect construction contractors from hazards, it does nothing to protect members of the public from hazards occurring mere feet away from the construction areas. Further, stating that "specific precautions to protect workers and the public from exposure to toxic gases would be required, and specialized excavation methods would be needed to prevent explosion," does not satisfy even minimum legal standards for mitigation. It is absolutely uncertain as to what these standards are or how they mitigate significant hazardous impacts. Deferring any meaningful analysis of those prevention steps and deferring analysis of the potential harms to be faced by the public by the accidental release of hazardous materials does not comply with CEQA's requirements to inform the public and mitigate significant impacts.

20 cont'd

21

ii. The LST Analysis Is Also Legally Faulty

According to Original DEIR the LST analysis assumes construction activity at 25 meters to the nearest sensitive resource. The cut and cover construction and the construction staging areas presented in the DEIR and the Revised Construction Design involve excavation and storage of potentially hazardous materials, such as the soil, much closer to sensitive receptors than the 25 meters analyzed. Thus, the LST impacts will likely be much worse than analyzed and the conclusion that "with implementation of mitigation, localized emissions from construction activities would be less than significant..." is not supported by substantial evidence. Original DEIR p. 4-82.

22

iii. Ventilation Shafts

There is also no information regarding the air quality impacts associated with the ventilation shafts and the air borne pollutants that may be expelled from the Project, including Aerially-Deposited Lead ("ADL") and other pollutants. If there are ventilation shafts proposed on or adjacent to the Property, more analysis is necessary. To the extent that there are significant impacts, they need to be mitigated to a level less than significant. There is simply an absence of analysis and the community needs to know the risk to sensitive receptors in relation to air pollution and hazards directly coming from the Project.

23

DLA PIPER

iv. Odors

Especially if the soil and groundwater contain petroleum products and other chemicals, there may be significant odors associated with the massive amounts of excavation and removal that would occur on or adjacent to the Property. Odors from the excavation may cause significant impacts at the Plaza and outdoor uses at the Property, and CEQA Guidelines Appendix G Section III(e) requires analysis of these impacts affecting a substantial number of people. Similar to odors caused by construction, excavation and construction may unleash a wave of rats and other vermin onto Downtown streets. Rats and other vermin, aside from creating a nuisance, may present a hazard to the public that needs to be analyzed and mitigated. The DEIR also lacks this analysis. 24

c. Traffic Impacts Inadequately Analyzed

i. Flower and Fifth Streets

The DEIR analyzed the permanent removal of one lane of Flower Street adjacent to the Property; however, it did not analyze the removal of two lanes of traffic on Flower Street for the construction staging area proposed at the August 22, 2011 meeting. As the construction is scheduled to last up to five years, there may be a significant traffic impact that was not analyzed with the removal of two lanes of traffic along Flower Street adjacent to the Property. Not only will the level of service on Flower Street be degraded, motorists exiting the Property's parking garage on 5th Street will find it more difficult to exit the parking garage due to the various closure of lanes on Flower Street, additional haul and construction worker trucks, construction, and construction staging on or adjacent to the Property. This will cause unacceptable queuing inside the Property's parking garage as well as increase difficulty for motorists exiting the garage who are trying to get into the left lane of Fifth Street in order to turn left onto Flower Street so as to access the Harbor Freeway carpool lane south of Downtown. Combined with the anticipated construction and operation of the Stadium ("Farmers Field"), there will be a new significant or substantially worse significant impact that was not disclosed in the DEIR. 25

ii. Additional Traffic Mitigation Measures Are Required

Excavation for the cut and cover will require 20-30 haul trucks per day according to the DEIR. Since the haul trucks may idle outside the construction staging areas, they should be limited to off-peak 26

DLA PIPER

hours to reduce impacts on Flower Street, Fifth Street and the freeways that the trucks may use (i.e., 110, 101, 10 and 5). These haul trucks should not idle, travel in platoons or park in front of the Property. 26 cont'd

d. Inadequate Range Of Alternatives

All of the construction Project alternatives include the same underground cross-over section of track north of 5th Street adjacent to the Property. Draft EIR p. 2-25. This design feature requires cut and cover and precludes the use of a Tunnel Boring Machine ("TBM") at this location even though a TBM has much fewer construction impacts. Further, the use of a TBM would remove the need for construction staging areas on the Property or in front of the Property on Flower Street. Whether the use of a TBM is characterized as a mitigation measure or alternative, it is not clear why the cross-over section cannot occur farther to the northeast of the Property, especially where the Project tracks come to grade since it will reduce many of the noise and air quality significant impacts to this vibrant part of Downtown. Failure to analyze alternatives to this location of the cross-over component is a failure to mitigate and/or provide a reasonable range of alternatives and also a failure to mitigate construction impacts that would occur on or in front of the Property. 27

e. Cumulative Impacts

During the time that the lead agency took to revise portions of the DEIR to address "... changes in the project or environmental setting as well as additional data or other information ... that deprives the public of a meaningful opportunity to comment upon a substantial adverse environmental effect of the project or a feasible way to mitigate or avoid such an effect (including a feasible project alternative) that the project's proponents have declined to implement"[3] it should have also revisited its cumulative impacts analysis to include the construction and operation of Farmers Field (which will occur at the same time as the construction and eventual operation of the Project) since both, along with other related projects, will create significant traffic, access, circulation, noise, and air quality cumulative impacts. The Project will make a cumulatively considerable contribution to these impacts that will, for instance, completely gridlock Flower and 5th Streets during construction. The Farmers Field proposal presents new information, and since the Project's construction timeline would likely overlap with the construction and operation of Farmers Field, there are likely to be new significant environmental impacts that have not been analyzed or mitigated in the DEIR. Especially since various portions of the EIR were recirculated, it is 28

[3] Draft EIR p. 2.

DLA PIPER

inconceivable why this important related project was not taken into account in the DEIR. Considering that Flower Street is the closest southbound arterial to Figueroa leading from Bunker Hill to South Park and the Farmers Field area, more mitigation is necessary to avoid construction gridlock and massive detours in Downtown; it would be reasonable to require coordination with the construction of the Farmers Field; coordination of haul routes; and additional flagmen and traffic personnel on days with heavy construction trips, road closures, and game days/events. None of these measures, including responsibility, fair share allocations, enforceability and payment for costs to mitigate is included in the DEIR as CEQA requires. In addition, the cumulative impacts of the 755 S. Figueroa Street project have not been taken into account. Taken together, the cumulative environmental impacts of the Project will be much worse than analyzed.[4] 28 cont'd

f. Emergency Access/Egress

The Project proposes to take away the Plaza and this could have a harmful impact on emergency ingress/egress for the Property. There is no analysis in the DEIR of whether construction of the Project would impair implementation of or physically interfere with an adopted emergency response plan or emergency evacuation plan, as required by CEQA Guidelines Appendix G Section VIII(g). 29

g. Uncertain Project Description

Metro proposes to temporarily take the Property's Plaza, a small portion of it, or the area in front of the Project for a construction staging area. Inexplicably, the At-grade LRT Alternative and Underground Emphasis LRT Alternative would require 13,325 sf of the Plaza (Draft EIR p. 4.2-5 and 4.2-9) while the Locally Preferred Alternative would require a take of 10,233 square feet of the Plaza (Draft EIR p. 4.2-17). There is no explanation of the reasons for the different takings and the different impacts that may result, such as for noise and vibration. 30

The Revised Construction Design is not in the DEIR. While the Revised Construction Design is preferable to the unacceptable taking of the Plaza for a construction staging area, using Flower Street in front of the Plaza as a construction staging area will create vibration, noise and air quality emissions, as well as aesthetic impacts that have not been analyzed in the DEIR. Certainly, there are other portions along the proposed Project route where there would be more appropriate construction staging areas without the pedestrian traffic, vehicular traffic, sensitive hotel uses, commerce and other activities. 31

[4] Operational traffic is also faulty because it does not include the related projects of 755 S. Figueroa and Farmers Field. There may be additional significantly impacted intersections.

DLA PIPER

Farther to the north along Flower Street are areas that are less dense, active, and have more open space so that construction impacts would be reduced significantly merely by moving the construction staging area away from the Plaza or the front of the Property. 31 cont'd

Metro has not made it known whether the Revised Construction Design is a new alternative, a variation of an alternative, or a new component of the Project since it appears nowhere in the DEIR. "An accurate, stable and finite project description is the sine qua non of an informative and legally sufficient EIR." See *County of Inyo v. City of Los Angeles* (1977) 71 Cal.App.3d 185 at 192. It is uncertain where the construction impacts would occur and the DEIR does not analyze the worst-case construction impacts for the areas within the proposed temporary construction easements and staging areas, including the placement of a construction staging area within Flower Street adjacent to the Plaza. 32

h. Aesthetics: Full Visual Impact Not Shown

The Project Description and Noise Section do not adequately describe or show the visual impact of the construction barriers and noise attenuation features. Placement of construction worker parking, trailers and equipment on the Plaza, even temporarily, will create a new significant aesthetic impact. Nor is it clear how the operational design would be integrated with the adjacent properties or impact them. CEQA Guidelines Appendix G Section I(c) requires analysis and disclosure if the Project will degrade the existing visual character or quality of the site and its surroundings, and the Project Description does not give enough information about the appearance of the Project to satisfy this requirement. 33

2. Ownership Issues Of Concern

While the Owner's issues of concerns are woven throughout this letter with the legal inadequacies, these are the Owner's most important issues regarding the Project: 34

i. Protecting The Project's Plaza From Being Used As A Construction Easement

The Plaza is a focal point for the Property. It provides the main entrance to the building from Flower and Fifth Streets. It also is an area where tenants, workers and the public have lunch, meet people and generally activate the surrounding streetscape. The temporary construction easement proposed by the LPA and other alternatives would not only destroy this vibrant atmosphere, it would create many significant and unavoidable environmental impacts. Although Metro introduced a more 35

DLA PIPER

attractive alternative plan, it has not been published yet or approved. The Owner strongly prefers not to have any construction staging area on or adjacent to the Property. If a construction staging area is necessary near the Property, the Revised Construction Design, with the same additional modifications, is much more acceptable. One modification that should be made is the removal of the stairwell temporary construction easement identified in the Revised Construction Design. It is simply not needed as there is no ADA access to the stairwell, and an easement to allow ADA access to an ADA inaccessible stairwell is not necessary. 35 cont'd

ii. Reasonable Range of Alternatives

As stated earlier in this letter, a reasonable range of alternatives has not been examined. One alternative not considered is an alternative construction staging area on Flower Street, north of 4th Street, or on 4th Street, under the 4th Street bridges. There, pedestrian traffic and urban density diminish greatly so that the environmental impacts of construction staging would be experienced by a considerably lower number of people. 36

iii. Flush Deck on Flower and 5th Streets

At the August 22, 2011 Revised Construction Design meeting, Metro staff introduced a raised deck elevation along the Flower Street right-of-way. The Owner strongly prefers decking flush with the street level to avoid ramping so as to avoid damage to cars entering the Property's parking garage, and more importantly, to avoid hazards to pedestrians crossing Flower and 5th Streets. 37

iv. Garage Ingress/Egress Congestion

The Property's sole vehicular entrance is located on Flower Street and it is already difficult to identify without construction barricades in front of it. Due to the inconveniences created by construction, including detours, dust, noise and roadway closures, the Property will likely experience a decline in cars parking in the garage and a commensurate drop in parking revenue. Metro must compensate the Owner for this loss, as well as any loss in tenancy as a result of five years of construction on or adjacent to the Property. 38 Further, with construction on Flower Street (and 5th Street at its intersection with Flower Street), there will be significant congestion and delay during the multi-year construction timeline. Cars exiting the Property's parking garage already face a difficult exit and queuing, especially when the Harbor Freeway is congested since this backs up traffic on Fifth Street. Additional congestion on Flower Street 39

DLA PIPER

and Fifth Street will make egress more difficult and measures are required to minimize this significant impact. The Owner is also very concerned regarding the ramp to the new street level deck; more information needs to be provided to understand how the ramping system will work to ensure the protection of people and property. Please also see comments in Section 2.c.ii of this letter. 39 cont'd

v. Other Comments

All construction staging areas, fencing and barriers must be aesthetically pleasing and well maintained. Noise, as addressed earlier in this letter, must be minimized. The Owner prefers that more noise intensive construction activities occur during off-peak hours, such as during the early morning, nights, and on weekends, to minimize disruption to tenants and visitors on the Property. Since so many tenants and members of the public enjoy eating lunch outside in the Plaza, the Owner requests that loud construction activities be scheduled outside of the lunch hour. Last, while the construction schedule anticipates construction commencing in 2014, the Owner requests that construction not begin until that date, at the earliest. 40

3. Conclusion

The Owner is supportive of Metro's efforts with regard to the operational characteristics of the Project; however, construction impacts require additional analysis and legally adequate mitigation measures. The construction design proposed in the DEIR and the Reduced Construction Design would both have several significant and unavoidable environmental impacts that have not been analyzed or mitigated. The Revised Construction Design is the strong preference because it would likely avoid some of the significant environmental impacts and it would also cost Los Angeles County taxpayers considerably less than the more environmentally harmful options proposed in the DEIR. CEQA requires that the full environmental impacts of the Project be disclosed, analyzed and mitigated. 41

DLA PIPER

We sincerely hope that Metro adequately addresses the modifications and concerns described in this letter. Without changes and additional enforceable and feasible mitigation measures, the Owner has no choice but to vigorously defend its Plaza and Property from the unwarranted proposed taking and the significant environmental impacts described in the DEIR.

R-BU6

Responses to Comments from DLA Piper LLP on behalf of Hines Interest Limited Partnership, Leaderman, Ryan M.

Response to Comment R-BU6-1

Representation of Hines Interest Limited Partnership is noted. The public comment period for the Draft EIS/EIR was from September 3, 2010 to October 18, 2010. As written in the 2011 CEQA guidelines §15088.5(f)(2):

> *When the EIR is revised only in part and the lead agency is recirculating only the revised chapters or portions of the EIR, the lead agency may request that reviewers limit their comments to the revised chapters or portions of the recirculated EIR. The lead agency need only respond to (i) comments received during the initial circulation period that relate to chapters or portions of the document that were not revised and recirculated, and (ii) comments received during the recirculation period that relate to the chapters or portions of the earlier EIR that were revised and recirculated. The lead agency's request that reviewers limit the scope of their comments shall be included either within the text of the revised EIR or by an attachment to the revised EIR.*

Metro accordingly requested that comments on the Supplemental EA/Recirculated Draft EIR Sections be limited to the recirculated content in the introduction, under the "Supplemental EA/Recirculated Draft EIR Sections Review Process" heading. However, responses to comments from DLA Piper LLP on the Supplemental EA/Recirculated Draft EIR Sections below are provided in the context of both the Supplemental EA/Recirculated Draft EIR Sections and the Draft EIS/EIR.

The Locally Preferred Alternative would not destroy the open air plaza. Only part of the plaza would be used, as shown in Table 4.2-5 and Appendix 1, Updated Locally Preferred Alternative Drawings, of this Final EIS/EIR. Metro plans to use the temporary construction easement on the property to preserve vehicle and pedestrian access throughout the duration of cut and cover activities on the adjacent portion of Flower Street (24 to 48 months, as indicated in Table 4.18-1 of the Supplemental EA/Recirculated Draft EIR Sections and this Final EIS/EIR), and to separate pedestrians from street work with K-rail and fences. It is unlikely that this type of temporary activity on the easement, intended to preserve safe pedestrian access to the property, would cause substantial disruption. The entire plaza would be restored to its pre-construction condition upon completion of construction activities.

Response to Comment R-BU6-2

The Draft EIS/EIR and Supplemental EA/Recirculated Draft EIR Sections propose a temporary construction easement across parcel APN 5151-018-017 as shown in Table 4.2-5 and the parcel data table in Appendix II, Conceptual Drawings for Build Alternatives Analyzed in the Draft EIS/EIR, of the Draft EIS/EIR and Appendix R-1, Locally Preferred Alternative Drawings, of the Supplemental EA/Recirculated Draft EIR Sections. Due to refinements made to the Locally Preferred Alternative to reduce impacts since publication of the Supplemental EA/Recirculated Draft EIR Sections, the size of this proposed easement has been reduced from 10,233 square feet to 1,019 square feet, as shown in Table 4.2-5 and Appendix 1, Locally Preferred Alternative

Drawings, of this Final EIS/EIR. The proposed activities to be performed on temporary construction easements corridor-wide are discussed in Sections 2.4.1 and 4.18.2.3 of the Draft EIS/EIR, Supplemental EA/Recirculated Draft EIR Sections, and this Final EIS/EIR. Metro plans to use the temporary construction easement on Hines property to preserve vehicle and pedestrian access, and to separate pedestrians from street work with K-rail and fences. Construction impacts and mitigation measures are identified in Section 4.18, Construction Impacts, of the Draft EIS/EIR and this Final EIS/EIR, including noise, air quality, vibration, hazardous materials, and safety. Additional detail is provided in the preceding sections of Chapter 4, Environmental Analysis, Consequences, and Mitigation, and in the document appendices. Following construction, the plaza would be restored to its pre-construction condition. Metro would ensure that any damage caused by construction is repaired. Metro would keep entrances and exits clear of obstructions, and would ensure that adequate emergency ingress and egress routes are maintained at all times during construction, as indicated in Section 4.15.4.2.1 of this Final EIS/EIR and mitigation measure number SS-15 in the Mitigation Monitoring and Reporting Program for the Locally Preferred Alternative (Chapter 8 of this Final EIS/EIR).

Response to Comment R-BU6-3

Impacts associated with construction activities that would occur along Flower Street have been adequately analyzed in the EIS/EIR. Mitigation measures have been identified to reduce significant impacts under CEQA and adverse effects under NEPA to the maximum extent feasible. As indicated in Chapter 3, Transportation Impacts and Mitigation, of this Final EIS/EIR, construction-related impacts to traffic, transit, bicycle, and pedestrian circulation would remain significant, adverse, and unavoidable after mitigation. As discussed during the August 22, 2011 meeting, the size of the proposed easement across parcel APN 5151-018-017 has been reduced from 10,233 square feet to 1,019 square feet, as shown in Table 4.2-5 and Appendix 1, Locally Preferred Alternative Drawings, of this Final EIS/EIR.

Response to Comment R-BU6-4

Since publication of the Supplemental EA/Recirculated Draft EIR Sections, the size of the proposed easement across parcel APN 5151-018-017 has been reduced from 10,233 square feet to 1,019 square feet, as shown in Table 4.2-5 and Appendix 1, Locally Preferred Alternative Drawings, of this Final EIS/EIR. None of the refinements made since publication of the Draft EIS/EIR would introduce new or increased traffic, air quality, or visual/aesthetic impacts. Noise impacts are described in Section 4.7, Noise and Vibration, of the Supplemental EA/Recirculated Draft EIR Sections and this Final EIS/EIR, but would be no worse at the Hines property than those analyzed in Section 4.7, Noise and Vibration, of the Draft EIS/EIR. Mitigation measures that will be implemented for the Locally Preferred Alternative are listed in the Mitigation Monitoring and Reporting Program, Chapter 8, of this Final EIS/EIR.

Response to Comment R-BU6-5

The Draft EIS/EIR, Supplemental EA/Recirculated Draft EIR Sections, and this Final EIS/EIR have been prepared in compliance with NEPA and CEQA. These documents disclose environmental impacts and include adequate feasible measures to reduce or avoid significant impacts under CEQA and adverse effects under NEPA. Multiple build alternatives have been studied, as shown in Chapter 2, Alternatives Considered, of the Draft EIS/EIR and the

Supplemental EA/Recirculated Draft EIR Sections. Metro has identified the Locally Preferred Alternative as the environmentally superior alternative based on the analysis in the EIS/EIR, as noted in Section 2.6.3 of the Supplemental EA/Recirculated Draft EIR Sections and this Final EIS/EIR.

The Supplemental EA/Recirculated Draft EIR Sections was prepared to formalize refinements made to the Locally Preferred Alternative since publication of the Draft EIS/EIR, and to analyze how impacts would differ from those included in the Draft EIS/EIR. After mitigation, no new significant impacts under CEQA or adverse effects under NEPA would occur. Some adverse impacts are reduced by the refinements. Since publication of the Supplemental EA/Recirculated Draft EIR Sections, Metro has made further refinements to the Locally Preferred Alternative that would reduce impacts, including reduction of the size of the proposed temporary construction easement across parcel APN 5151-018-017, as shown in Table 4.2-5 and Appendix 1, Locally Preferred Alternative Drawings, of this Final EIS/EIR. A larger easement across the parcel was previously identified in Table 4.2-5 and Appendix II, Conceptual Drawings for Build Alternatives Analyzed in the Draft EIS/EIR, of the Draft EIS/EIR, and in Table 4.2-5 and Appendix R-1, Locally Preferred Alternative Drawings, of the Supplemental EA/Recirculated Draft EIR Sections. The Draft EIS/EIR was circulated for public review from September 3, 2010 to October 18, 2010, and the Supplemental EA/Recirculated Draft EIR Sections was circulated for public review from July 22, 2011 to September 6, 2011, thus granting the public an opportunity to comment on all of the project's impacts pursuant to CEQA Guidelines §15087, 15088, and 15088.5.

This Final EIS/EIR incorporates the public comments received on the Draft EIS/EIR and Supplemental EA/Recirculated Draft EIR Sections along with responses, and presents the final mitigation measures for the Locally Preferred Alternative in the Mitigation Monitoring and Reporting Program (Chapter 8 of this Final EIS/EIR).

Response to Comment R-BU6-6

Items in the list are addressed individually in the responses below.

Response to Comment R-BU6-7

As indicated in Section 4.7, Noise and Vibration, of this Final EIS/EIR, consistency with the goals of the applicable local ordinances and implementation of best management practices (BMPs), would ensure that noise levels associated with construction of the Locally Preferred Alternative would not result in an adverse effect under NEPA or a significant impact under CEQA to sensitive land uses as classified by the Federal Transit Administration (FTA). An adequate noise analysis was prepared for the proposed project. Updates to the noise and vibration analysis were included in Section 4.7 of the Supplemental EA/Recirculated Draft EIR Sections to address refinements made to the Locally Preferred Alternative since publication of the Draft EIS/EIR, but no significant change in noise and vibration impacts to the referenced property resulted from these refinements.

Response to Comment R-BU6-8

As indicated in Section 4.7, Noise and Vibration, of the EIS/EIR, the following construction activities would have the most potential for construction-related noise and vibration impacts and were analyzed in the EIS/EIR: cut and cover construction of a tunnel at Flower Street; cut and

cover construction of the approach to the proposed 2nd/Hope Street station and cut and cover or sequential excavation method (SEM) construction of the station itself; construction of the proposed 2nd Street/Broadway station; construction of the proposed 1st/Central Avenue station; and tunnel boring machine tunneling beneath 2nd and Flower Streets and the insertion site northeast of the 1st and Alameda Streets intersection.

As indicated in Chapter 2, Alternatives Considered, of the Draft EIS/EIR, construction staging areas are locations needed for: equipment storage, construction materials delivery and storage, equipment assembly, materials production, dewatering activities, access roads, construction worker parking, temporary trailer offices, demolition staging, removal of excavated materials, and other related activities during the construction period. Actual construction would not occur in the construction staging areas. As indicated above, activities that would occur in the construction staging areas would be staging and storage, except at the Mangrove property where construction staging activities would involve removal of soil from tunneling operations. However, this activity at the Mangrove property would occur at a distance of 50 feet or greater from a sensitive receptor. Activities that would occur within the construction staging areas would not generate noise in excess of FTA construction noise criteria. Since publication of the Supplemental EA/Recirculated Draft EIR Sections, reductions were made to the size of proposed temporary construction easements along Flower Street. Refer to Appendix 1, Locally Preferred Alternative Drawings, in Volume F-5 of this Final EIS/EIR.

In the vicinity of the CityCorp Plaza, cut and cover construction would occur along Flower Street, south of 4th Street, primarily within the road travel way. Temporary concrete decking would be placed over the cut immediately following the first part of excavation to allow traffic to pass above. After the concrete decking is in place, construction along Flower Street in the vicinity of the CityCorp Plaza would occur underground and would be covered by concrete decking. Therefore, the distance of 50 feet used in the noise analysis is appropriate.

As indicated in Section 4.7, Noise and Vibration, of this Final EIS/EIR, Typical types of BMPs the contractor will use to ensure construction-related noise levels do not exceed FTA construction noise criteria include, but are not limited to, the following:

- Placement of temporary noise barriers around the construction site;
- Placement of localized barriers around specific items of equipment or smaller areas;
- Use of alternative back-up alarms/warning procedures;
- Higher performance mufflers on equipment used during nighttime hours; and
- Portable noise sheds for smaller, noisy, equipment, such as air compressors, dewatering pumps, and generators.

Therefore, noise barriers would be placed around the construction staging areas. A formal construction mitigation plan will be prepared for this project, which shall prohibit noise levels generated during construction from exceeding the FTA construction noise criteria. This could include prohibiting simultaneous operation of major pieces of construction equipment if

simultaneous operation exceeds FTA construction noise criteria. This has been incorporated as mitigation to avoid significant construction noise impacts under CEQA and adverse effects under NEPA.

Noise generated from haul trucks would not result in a significant noise impact under CEQA or adverse effect under NEPA. Haul trucks would operate on the roadways designated as haul routes for the project. It takes a doubling of traffic to result in a 3 dBA (noticeable noise increase to the human ear) increase in noise (USDOT 2006). The number of haul trucks that would be added during construction of the Locally Preferred Alternative would not result in a doubling of traffic along the roadways designated as haul routes, therefore, would not result in a noticeable increase in roadway noise.

Response to Comment R-BU6-9

Noise and vibration impacts associated with construction of the Locally Preferred Alternative were adequately analyzed in accordance with NEPA and CEQA in Section 4.7, Noise and Vibration, Appendix S, Noise and Vibration Technical Memorandum, and Appendix 2, Updated Locally Preferred Alternative Noise and Vibration Analysis, of this Final EIS/EIR. The discussion of construction-related noise impacts has been clarified in Section 4.7, Noise and Vibration, of this Final EIS/EIR. As indicated in Section 4.7 and Table 4.7-15 of this Final EIS/EIR, estimated construction noise levels would not exceed FTA construction noise criteria and impacts would be less than significant under CEQA and not substantially adverse under NEPA. Consistency with the goals of the applicable local ordinances and implementation of BMPs, would also ensure that noise levels associated with construction of the Locally Preferred Alternative would not result in an adverse effect under NEPA or a significant impact under CEQA to sensitive land uses. In addition, implementation of BMPs would also attenuate noise levels generated by construction equipment shown in Table 4.7-8 of this Final EIS/EIR. As indicated in Section 4.7.3.5 of this Final EIS/EIR, significant adverse vibration impacts under CEQA and NEPA associated with construction of the Locally Preferred Alternative could occur. Mitigation measures have been identified in Section 4.7, Noise and Vibration, and Chapter 8, the Mitigation Monitoring and Reporting Program for the Locally Preferred Alternative, which would reduce vibration impacts to less than significant under CEQA and not substantially adverse under NEPA. Refer to Section 4.7, Noise and Vibration, of this Final EIS/EIR for more detail regarding noise and vibration impacts associated with construction of the project.

As part of the project, Metro would require the construction contractor to be consistent with the goals of Section 41.40(a) of the Los Angeles Municipal Code. The code states that engaging in construction, repair, or excavation work, with any construction device, or job-site delivery of construction materials without a Police Commission-issued Variance or Permit would constitute a violation:

- Between the hours of 9:00 p.m. and 7:00 a.m.
- In any residential zone, or within 500 feet of land so occupied, before 8:00 a.m. or after 6:00 p.m. on any Saturday, or at any time on any Sunday.
- In a manner as to disturb the peace and quiet of neighboring residents or any reasonable person of normal sensitiveness residing in the area.

The threshold used, not the impacts of a previous project, determines whether or not construction of a project would result in a noise impact. Per CEQA Guidelines, each public agency is encouraged to develop and publish thresholds of significance that the agency uses in the determination of the significance of environmental effects. Since the lead agencies are Metro and the FTA, this analysis applies FTA criteria to determine the threshold for significance for noise and vibration impacts.

Response to Comment R-BU6-10

Metro and FTA, as the lead agencies for the Regional Connector project, are not required to use the *L.A. CEQA Thresholds Guide* when determining impacts associated with this project. Per CEQA Guidelines, each public agency is encouraged to develop and publish thresholds of significance that the agency uses in the determination of the significance of environmental effects. Since the FTA is one of the lead agencies for this project with adopted thresholds of significance, the noise and vibration analysis applied FTA criteria to determine the threshold for significance for noise and vibration impacts. The discussion regarding the threshold that was used to analyze construction noise impacts has been clarified in Section 4.7.3 of this Final EIS/EIR. As indicated in Section 4.7 and Table 4.7-15 of this Final EIS/EIR, estimated construction noise levels would not exceed FTA construction noise criteria identified in Section 4.7.3 and impacts would be less than significant under CEQA and not substantially adverse under NEPA.

Response to Comment R-BU6-11

Please refer to Response to Comment R-BU6-9, above. Article 1 of Chapter XI, Noise Regulation of the Los Angeles Municipal Code, identifies general provisions of the noise regulation. Article 2 of the Los Angeles Municipal Code identifies noise regulations for special noise sources. As stated Section 112.03, Construction Noise, of the Los Angeles Municipal Code, "Noise due to construction or repair work shall be regulated as provided by Section 41.40 of this Code." As indicated in Section 4.7, Noise and Vibration, of the Supplemental EA/Recirculated Draft EIR Sections and this Final EIS/EIR, construction would be consistent with the goals of Section 41.40(a) of the Los Angeles Municipal Code. Consistency with local land use plans and polices is discussed in Section 4.1, Land Use and Development, of this Final EIS/EIR.

Response to Comment R-BU6-12

Please refer to Responses to Comments R-BU6-8 and R-BU6-9, above. The discussion of construction-related noise impacts has been clarified in Section 4.7, Noise and Vibration, of this Final EIS/EIR. As indicated in Section 4.7 and Table 4.7-15 of this Final EIS/EIR, estimated construction noise levels would not exceed FTA construction noise criteria identified in Section 4.7.3 and impacts would be less than significant under CEQA and not substantially adverse under NEPA. Noise impacts associated with construction of the Locally Preferred Alternative were determined not to be significant or substantially adverse and mitigation was not required. Section 4.7, Noise and Vibration, of the Supplemental EA/Recirculated Draft EIR Sections and this Final EIS/EIR, indicated that consistency with the goals of the applicable local ordinances and implementation of BMPs, would ensure that noise levels associated with construction of the Locally Preferred Alternative would not result in an adverse effect under NEPA or a significant impact under CEQA to sensitive land uses.

Metro would require the construction contractor to be consistent with the goals of Section 41.40(a) of the Los Angeles Municipal Code. Regarding the discussion in Section 4.18, Construction Impacts, of cut and cover construction on the Metro Gold Line Eastside Extension, the Supplemental EA/Recirculated Draft EIR Sections and this Final EIS/EIR indicated that similar progressive staging could be performed for the Regional Connector project and that schedules would be developed in coordination with the affected communities. The abovementioned discussion in Section 4.18 indicates that similar progressive staging could be performed for the project; not that similar progressive staging will be performed for the project. If similar progressive staging is pursued later, it would be done at the request of the affected city and/or community in order to shorten the duration of construction in the area and, thus, the duration of noise generated during construction. The statement in Section 4.18, Construction Impacts, does not change the conclusions in Section 4.7, Noise and Vibration.

Response to Comment R-BU6-13

As discussed in Section 4.3.4 of the Draft EIS/EIR, the Worksite Traffic Control Plan is specific to ensuring the availability of detours for traffic and pedestrian circulation during construction. The construction-related need for these detours and their potential impact has already been analyzed in Sections 3.3.5.1.2 and 3.3.5.1.4 of the Draft EIS/EIR and this Final EIS/EIR. This mitigation measure has been incorporated into Section 4.3.4.2 and the Mitigation Monitoring and Reporting Program for the Locally Preferred Alternative (Chapter 8) of this Final EIS/EIR. As written in these sections, the measure includes specific features such as crossing guards and other temporary traffic controls in the vicinity of construction sites, haul routes, and other construction areas. The Worksite Traffic Control Plan and the Construction Mitigation Plan would incorporate the construction mitigation measures already identified in compliance with CEQA in Section 4.18, Construction Impacts, of the Draft EIS/EIR and committed to in the Mitigation Monitoring and Reporting Program for the Locally Preferred Alternative (Chapter 8 of this Final EIS/EIR) together with community and Los Angeles Department of Transportation (LADOT) input. These measures would reduce construction impacts. Ongoing coordination with LADOT and the community would be needed to address the dynamic conditions and access needs in the community.

"Where feasible" and "to the extent practical" have been removed from this mitigation language. Restriping is not feasible at all locations (such as near fire hydrants and other restricted parking areas), and restriping would be performed in locations that are not precluded by such constraints. Mitigation measures in Sections 4.5.4.1 and 4.7.4.1 of the Draft EIS/EIR indicate that the construction contractor would be required to meet noise and air quality performance criteria (such as up-to-date engine emissions levels). These mitigation measures have been expanded and incorporated into Sections 4.5.4.2 and 4.7.4.2 and the Mitigation Monitoring and Reporting Program for the Locally Preferred Alternative (Chapter 8) of this Final EIS/EIR. Under any scenario, sufficient feasible modifications would exist to allow the contractor to meet the performance criteria (South Coast Air Quality Management District standards for off-road emissions and FTA noise and vibration criteria) specified in mitigation measure numbers AQ-1, NV-1, NV-2, and NV-13 in the Mitigation Monitoring and Reporting Program for the Locally Preferred Alternative (Chapter 8 of this Final EIS/EIR). Multiple types of equipment modification are listed as possible ways the construction contractor can meet the regulations. Regardless of

which of these modifications are implemented, these standards would be met. Selection of modifications would be performed prior to beginning construction.

Response to Comment R-BU6-14

Noise generated during construction of the Locally Preferred Alternative is not expected to result in a significant impact under CEQA or adverse effect under NEPA and mitigation is not required. The discussion of construction-related noise impacts has been clarified in Section 4.7, Noise and Vibration, of this Final EIS/EIR. As indicated in Section 4.7 and Table 4.7-15 of this Final EIS/EIR, estimated construction noise levels would not exceed FTA construction noise criteria identified in Section 4.7.3 and impacts would be less than significant under CEQA and not substantially adverse under NEPA. As indicated in Section 4.7, Noise and Vibration, of the Supplemental EA/Recirculated Draft EIR Sections and this Final EIS/EIR, consistency with the goals of the applicable local ordinances and implementation of BMPs, would ensure that noise levels associated with construction of the Locally Preferred Alternative would not result in an adverse effect under NEPA or a significant impact under CEQA to sensitive land uses. Noise generated during construction of the Locally Preferred Alternative is not expected to exceed FTA's construction noise criteria. The purpose of mitigation measure number NV-13, as identified in Section 4.7.4.2 of this Final EIS/EIR, is to ensure FTA's construction noise criterion is not exceeded and to ensure that Metro is responsive to any noise complaints the public has during construction of the project. This mitigation measure demonstrates Metro's commitment to avoiding noise impacts associated with construction of the project. The filing of a noise complaint does not automatically indicate that FTA's construction noise criteria has been exceeded. However, this procedure is included to ensure the community that Metro is committed to open communication and responsiveness in implementing the Mitigation Monitoring and Reporting Program for the Locally Preferred Alternative included in Chapter 8 of this Final EIS/EIR.

Response to Comment R-BU6-15

As indicated in Section 4.7, Noise and Vibration, of the Supplemental EA/Recirculated Draft EIR Sections and this Final EIS/EIR, noise generated during construction of the Locally Preferred Alternative would not result in a significant impact under CEQA or adverse effect under NEPA and mitigation is not required. The discussion of construction-related noise impacts has been clarified in Section 4.7, Noise and Vibration, of this Final EIS/EIR. As indicated in Section 4.7 and Table 4.7-15 of this Final EIS/EIR, estimated construction noise levels would not exceed FTA construction noise criteria identified in Section 4.7.3 and impacts would be less than significant under CEQA and not substantially adverse under NEPA. As part of the project, the construction contractor would use BMPs to ensure that noise generated during construction would not exceed the FTA construction noise criteria. Typical types of BMPs the contractor can use include, but are not limited to, the following:

- Placement of temporary noise barriers around the construction site;
- Placement of localized barriers around specific items of equipment or smaller areas;
- Use of alternative back-up alarms/warning procedures;

- Higher performance mufflers on equipment used during nighttime hours; and
- Portable noise sheds for smaller, noisy, equipment, such as air compressors, dewatering pumps, and generators.

Metro will work with businesses to minimize the use of aboveground construction equipment that are major sources noise during the lunch hour. To reduce community and neighborhood impacts, mitigation measure number CN-6 requires Metro to develop a construction mitigation plan with community input to directly address specific construction impacts in the project area. Metro shall establish and receive input from the Regional Connector Community Leadership Council (RCCLC) in developing the construction mitigation plan. The RCCLC shall consist of representatives from all parts of the alignment area. Metro shall work with the RCCLC in developing the outreach plan. In addition, mitigation measure number CN-7 requires that barriers be erected around construction areas. As part of this mitigation measure barriers shall be enhanced with culturally-relevant artwork, attractive design features, and advertisements for parking locations and businesses where possible. Signage shall also identify that businesses are open during construction. Community input shall be sought in determining artwork and design features. Refer to the Mitigation Monitoring and Reporting Program for the Locally Preferred Alternative included in Chapter 8 of this Final EIS/EIR for a list of mitigation measures that shall be implemented as part of the Locally Preferred Alternative.

Response to Comment R-BU6-16

The comment incorrectly summarizes vibration impacts identified in Section 4.7, Noise and Vibration, of the Draft EIS/EIR. FTA's criteria for minimum safe distances between construction equipment and buildings were used to determine the potential for construction-activity-induced vibration to damage buildings. FTA's criteria are based on the types of construction equipment and the category/physical composition of a building, not the frequency of the event. Refer to Table 4.7-4 and 4.7-5 of the Draft EIS/EIR and this Final EIS/EIR. Section 4.7, Noise and Vibration, of the Draft EIS/EIR indicated that sensitive or historic buildings within 21 feet of construction activities (involving large bulldozers and drill rigs) for all the LRT alternatives may be susceptible to vibration damage. The discussion of the potential for construction-activity-induced vibration to damage buildings has been clarified since publication of the Draft EIS/EIR. Please refer to Section 4.7, Noise and Vibration, of the Supplemental EA/Recirculated Draft EIR Sections and this Final EIS/EIR.

With regard to the physical structure of the building, construction-related vibration impacts to sensitive buildings (Category I, II, III, IV buildings as defined in Table 4.7-4 of the Supplemental EA/Recirculated Draft EIR Sections and this Final EIS/EIR) and historic buildings located within 21 feet of the anticipated vibration-producing construction activity could be significant under CEQA and adverse under NEPA. As part of mitigation for the Locally Preferred Alternative, a pre-construction survey of all structures within 21 feet of the anticipated vibration-producing construction activity would be conducted to verify the building category, structural condition, and to provide a baseline for monitoring of ground-borne vibration and the potential for ground-borne vibration to cause damage. During construction, use of building protection measures such as underpinning, soil grouting, or other forms of ground improvement, use of lower vibration equipment and/or construction techniques, combined with a geotechnical and vibration monitoring program would be used to protect identified historic and sensitive

structures. With implementation of mitigation measures identified in Section 4.7.4.2.1 of this Final EIS/EIR, construction-related vibration impacts to historic and sensitive buildings located within 21 feet of the anticipated vibration-producing construction activity would not be adverse.

Response to Comment R-BU6-17

The discussion of human annoyance caused by vibration from construction activities has been revised since publication of the Draft EIS/EIR. Since publication of the Draft EIS/EIR, additional noise and vibration studies were performed (Appendix 2, Updated Locally Preferred Alternative Noise and Vibration Analysis, of this Final EIS/EIR) to analyze refinements of the alignment in areas near sensitive land uses. Please refer to Section 4.7, Noise and Vibration, of the Supplemental EA/Recirculated Draft EIR Sections and this Final EIS/EIR. The analysis of potential ground-borne vibration and ground-borne noise impacts to sensitive land uses during construction determined the level and frequency of vibration that would occur. Construction of the Locally Preferred Alternative would result in significant adverse ground-borne vibration and ground-borne noise impacts under NEPA and CEQA. With implementation of mitigation, ground-borne vibration and ground-borne noise impacts would be reduced to less than significant under CEQA and not substantially adverse under NEPA. Mitigation measures, such as maintaining distances greater than those provided in Table 4.7-5 of the Supplemental EA/Recirculated Draft EIR Sections and this Final EIS/EIR to avoid potential construction-related vibration impacts and sequencing construction activities that produce vibration, such as demolition, excavation, earthmoving, and ground impacting so that the vibration sources do not operate simultaneously, have been included as mitigation since publication of the Draft EIS/EIR. Refer to Section 4.7.4.2 of this Final EIS/EIR for a complete list of mitigation measures for the Locally Preferred Alternative.

FTA's Transit Noise and Vibration Impact Assessment manual identifies adjustment factors for generalized predictions of ground-borne vibration and noise. One of those adjustment factors is a reduction in vibration for coupling to building foundation loss. The level of reduction is dependent on the structure of the building. The general rule is the heavier the building construction, the greater the coupling loss. Given that the majority of the buildings in the project area are medium to high-rise buildings, the buildings were assumed to be relatively heavy and a 10 dBA reduction in vibration was assumed.

Response to Comment R-BU6-18

Soil testing has been performed as part of the project development and preliminary engineering process. However, it is not possible to test all soil along the Locally Preferred Alternative alignment prior to construction. Contaminated soil and groundwater may be encountered during construction, as indicated in Sections 4.9.3.5.2 and 4.10.3.5 of the Draft EIS/EIR and this Final EIS/EIR. Mitigation measures to safely monitor and handle contaminated groundwater and soil were included in Sections 4.9.4 and 4.10.4 of the Draft EIS/EIR, and have been incorporated into Sections 4.9.4.2 and 4.10.4.2 and the Mitigation Monitoring and Reporting Program for the Locally Preferred Alternative (Chapter 8) of this Final EIS/EIR. These mitigation measures would ensure that contamination does not spread or pose hazards to nearby people or properties.

A Health Risk Assessment is included in Appendix Q, Air Quality Impacts and Health Risk Assessment Technical Memorandum, of the Draft EIS/EIR and this Final EIS/EIR. In both Tables 5-8 and 5-11 of Appendix FF, Construction Impacts Technical Memorandum, of the Draft EIS/EIR and this Final EIS/EIR, the highest application screening index shown is 4.44E-01 (scientific E notation for 0.444), which is well below the threshold of 1.0. This is consistent with the findings of no significant impact under CEQA or adverse effect under NEPA on pages 79 and 93, as well as the findings of the Health Risk Assessment in Appendix Q, Air Quality Impacts and Health Risk Assessment Technical Memorandum, of the Draft EIS/EIR and this Final EIS/EIR.

Response to Comment R-BU6-19

Mitigation measures to address the excavation, storage, and removal of potentially contaminated soil are presented in Section 4.9.4.1 of the Draft EIS/EIR. These measures have been expanded in Section 4.9.4.2.1 and the Mitigation Monitoring and Reporting Program for the Locally Preferred Alternative (Chapter 8) of this Final EIS/EIR. In addition, Metro will comply with all applicable regulation in Section 4.9.1 of the Draft EIS/EIR and this Final EIS/EIR regarding the safe handling of contaminated soil, including the California Hazardous Waste Control Law and the Federal Occupational Safety and Health Act among others listed. Metro will not expose the public to hazardous materials.

Response to Comment R-BU6-20

The possibility for the accidental release of hazardous materials is analyzed in Sections 4.9.3.3.2 and 4.9.3.5.2 of the Draft EIS/EIR and this Final EIS/EIR. More detailed analysis is provided in Appendix U, Geotechnical/Subsurface/Seismic/Hazardous Materials Technical Memorandum, of the Draft EIS/EIR. Measures to mitigate these impacts below the level of significance are provided in Section 4.9.4.1 of the Draft EIS/EIR. These mitigation measures were incorporated into Section 4.9.4.2.1 and the Mitigation Monitoring and Reporting Program for the Locally Preferred Alternative (Chapter 8) of this Final EIS/EIR. The EIS/EIR adequately discloses to the public the steps that will be taken to preserve public health. The contents of the Contaminated Soil/Groundwater Management Plan are summarized in Section 4.9.4.1 of the Draft EIS/EIR. With implementation of such a plan containing these procedures, Section 4.9.3.5.2 of both the Draft EIS/EIR and this Final EIS/EIR conclude that impacts of accidental release of hazardous materials would be less than significant under CEQA and not substantially adverse under NEPA.

Response to Comment R-BU6-21

Portions of the Health Risk Assessment are summarized in multiple parts of Chapter 4, Environmental Analysis, Consequences, and Mitigation, to support environmental impact analysis. The full Health Risk Assessment is provided in greater detail in Appendix Q, Air Quality Impacts and Health Risk Assessment Technical Memorandum, of the Draft EIS/EIR and this Final EIS/EIR. The Health Risk Assessment in Appendix Q, Air Quality Impacts and Health Risk Assessment Technical Memorandum, would protect both construction workers and the public from hazards. The Draft EIS/EIR, Supplemental EA/Recirculated Draft EIR Sections, and this Final EIS/EIR do not defer analysis. The mitigation measures in Section 4.9.4.1 of the Draft EIS/EIR calling for specific precautions to protect workers and the public from exposure to toxic gases, and specialized excavation methods to prevent explosion is supported by other mitigation measures in the same section, such as testing for subsurface gases, consistency with City of Los

Angeles Methane Standards, implementation of BMPs for the handling of hazardous materials, and other mitigation measures carried forward into Section 4.9.4.2.1 and the Mitigation Monitoring and Reporting Program for the Locally Preferred Alternative (Chapter 8) of this Final EIS/EIR.

Response to Comment R-BU6-22

As indicated in Section 3.1.2.2 of Appendix Q, Air Quality Impacts and Health Risk Assessment Technical Memorandum, of the Draft EIS/EIR and this Final EIS/EIR, the Localized Significance Thresholds (LSTs) are adjusted based on the size of the construction area. The 25 meter assumption (approximately 82 feet) is a conservative estimate based on the size and location of the proposed construction areas shown in Table 4.2-5 and Appendix II, Conceptual Drawings for Build Alternatives Analyzed in the Draft EIS/EIR, of the Draft EIS/EIR and Table 4.2-5 and Appendix 1, Locally Preferred Alternative Drawings, of this Final EIS/EIR. This assumption represents the smallest distance provided for LST analysis by the South Coast Air Quality Management District. No change in results occurs at distances shorter than 25 meters. Virtually all construction activities would occur more than 25 meters from buildings. Some of these proposed construction areas are now smaller and farther from buildings, including the proposed temporary construction easement on parcel APN 5151-018-017, due to refinements made since publication of the Supplemental EA/Recirculated Draft EIR Sections. Activities that would occur within 25 meters of surrounding buildings mostly consist of construction staging, but some in-street cut and cover construction would also occur. Construction activities are described in Section 4.18.2 of the Draft EIS/EIR, Supplemental EA/Recirculated Draft EIR Sections, and Final EIS/EIR. As noted in Section 3.1.2.2 of Appendix Q, Air Quality Impacts and Health Risk Assessment Technical Memorandum, of the Draft EIS/EIR and this Final EIS/EIR, even if a pollutant happened to exceed an LST, a significant impact/adverse effect would be avoided through mitigation. These mitigation measures are included in Section 4.5.4 of the Draft EIS/EIR and in Section 4.5.4.2 and the Mitigation Monitoring and Reporting Program for the Locally Preferred Alternative (Chapter 8) of this Final EIS/EIR.

Response to Comment R-BU6-23

Operational emissions of the Locally Preferred Alternative are examined in Section 4.5.3.4.1 of the Draft EIS/EIR, and represent an improvement over the No Build Alternative. Electric trains do not emit aerially-deposited lead or other airborne pollutants. These types of pollutants are generated by vehicles that use diesel or leaded fuels, not electric vehicles such as light rail trains. As a result, the ventilation shafts would not emit significant adverse levels of airborne pollutants. Construction-related air quality impacts are discussed in Section 4.5.3.3 of the Draft EIS/EIR and this Final EIS/EIR, and mitigation measures are proposed in Section 4.5.4 of the Draft EIS/EIR. These mitigation measures have been expanded and incorporated into Section 4.5.4.2 and the Mitigation Monitoring and Reporting Program for the Locally Preferred Alternative (Chapter 8) of this Final EIS/EIR. Further, more detailed analysis is provided in Appendix Q, Air Quality Impacts and Health Risk Assessment Technical Memorandum, of the Draft EIS/EIR and this Final EIS/EIR.

Response to Comment R-BU6-24

Mitigation measures to safely monitor and handle contaminated groundwater and soil and prevent public exposure were included in Sections 4.9.4 and 4.10.4 of the Draft EIS/EIR, and

have been incorporated into Sections 4.9.4.2 and 4.10.4.2 and the Mitigation Monitoring and Reporting Program for the Locally Preferred Alternative (Chapter 8) of this Final EIS/EIR. These mitigation measures would ensure that contamination does not spread or pose hazards to nearby people or properties. The mitigation measures in Section 4.9.4.1 of the Draft EIS/EIR also call for specific precautions to protect workers and the public from exposure to toxic gases. This would curtail public exposure to any odors stemming from contaminated soil and groundwater. Excavation and tunnel boring activities are unlikely to disturb substantial amounts of vermin, especially to the extent that a public health hazard would occur.

Response to Comment R-BU6-25

Section 3.3.5.1.2 of the Draft EIS/EIR and this Final EIS/EIR states that construction would require temporary lane closures on Flower Street, which would temporarily reduce roadway capacity and modify existing traffic patterns. The Draft EIS/EIR does not specify that only one lane of Flower Street would be closed. Temporary closure of multiple lanes would be needed. Section 3.4 of the Draft EIS/EIR identifies mitigation measures to address the impacts of these temporary closures during construction, and these mitigation measures have been incorporated into Section 3.4.2 and the Mitigation Monitoring and Reporting Program for the Locally Preferred Alternative (Chapter 8) of this Final EIS/EIR. Metro would maintain access to the parking garage via existing or temporary driveways during business hours, as stated in mitigation measure number TR-1 in the Mitigation Monitoring and Reporting Program. Detours would be provided when necessary to maintain access to Flower and 5th Streets. As stated in mitigation measure number AQ-22, detour routes would be designed so that traffic does not idle for extended periods of time. It is Metro's goal to schedule haul truck trips at times when they would be the least disruptive to the community, as stated in mitigation measure number TR-2 in the Mitigation Monitoring and Reporting Program. The proposed downtown stadium is currently undergoing conceptual planning. It was not proposed at the time the Draft EIS/EIR was prepared, so the analysis assumes the current land uses for this site. The status of the stadium proposal is still preliminary. The conceptual planning is still ongoing, and no official proposal has been made. A reasonably foreseeable project is "any future project where the applicant has devoted significant time and financial resources to prepare for any regulatory review should be considered as probable future projects for the purposes of cumulative impact." (Gray v. County of Madera (2008)). The stadium had not met these criteria when the analysis in this EIS/EIR was performed, and has not yet begun preparations for regulatory review. Should this change, Metro would coordinate Regional Connector construction activities with the construction and operation of the stadium in order to minimize impacts. Even if the stadium was reasonably foreseeable, it would not change the impact determinations in this EIS/EIR.

Response to Comment R-BU6-26

The Mitigation Monitoring and Reporting Program for the Locally Preferred Alternative (Chapter 8 of this Final EIS/EIR) contains mitigation measures to address these concerns. Mitigation measure number AQ-13 would prohibit heavy-duty trucks from idling for more than five minutes, both on-site and off-site. Metro would also employ California Air Resources Board anti-idling requirements during construction. Mitigation measure number TR-2 states that Metro will attempt to schedule truck trips at times that are least disruption to the community. Similarly, mitigation measure number AQ-15 states that Metro will attempt to limit construction

activity that affects traffic flow to off-peak hours. It is Metro's goal to minimize the impacts of haul trips during construction.

Response to Comment R-BU6-27

The No Build and TSM Alternatives would not involve light rail construction, including cross-overs. Metro analyzed multiple alternate crossover locations in the Draft EIS/EIR and Supplemental EA/Recirculated Draft EIR Sections. The At-Grade Emphasis LRT Alternative would not have a crossover along its Flower Street route, as shown in Section 2.3.4.2 and Appendix II, Conceptual Drawings for Build Alternatives Analyzed in the Draft EIS/EIR, of the Draft EIS/EIR and this Final EIS/EIR. The Underground Emphasis LRT Alternative would have an underground crossover partially underneath and to the north of 4th Street, not adjacent to the referenced property, as shown in Section 2.3.5.2 and Appendix II, Conceptual Drawings for Build Alternatives Analyzed in the Draft EIS/EIR, of the Draft EIS/EIR and this Final EIS/EIR. The Locally Preferred Alternative would include a pocket track which could be used as a crossover between 5th and 4th Streets adjacent to the referenced property, but this would not change the impacts of the cut and cover construction proposed for this segment of the alignment in Figure 2-13 of the Draft EIS/EIR and Figure 2-16 of this Final EIS/EIR. Section 2.3.6.2 of the Supplemental EA/Recirculated Draft EIR Sections and this Final EIS/EIR lists multiple possible locations for crossovers, and states that not all of them will necessarily be pursued. The potential impacts associated with all of the possible locations are analyzed in the Supplemental EA/Recirculated Draft EIR Sections and this Final EIS/EIR. Flower Street from 4th Street to the existing light rail tunnel just south of 6th Street is highly constrained with existing subsurface tie-backs from previous construction projects that would interfere with tunneling activity. Tunneling activities using a tunnel boring machine south of 4th Street would not be practicable due to the need to remove tie-backs ahead of the tunnel boring machine. As such, cut and cover construction, as identified in Figure 2-13 of the Draft EIS/EIR and Figure 2-16 of this Final EIS/EIR, is continuing to be pursued in this location.

Response to Comment R-BU6-28

It should be noted that the cited text from the Supplemental EA/Recirculated Draft EIR Sections is a direct quotation of CEQA Guidelines §15088.5 regarding recirculation of EIRs. Section 4.19, Cumulative Impacts, of the Draft EIS/EIR and this Final EIS/EIR lists planned future projects within the project area. The proposed downtown stadium is currently undergoing conceptual planning. It was not proposed at the time the Draft EIS/EIR was prepared, so the analysis assumes the current land uses for this site. The status of the stadium proposal is still preliminary. The conceptual planning is still ongoing, and no official proposal has been made. A reasonably foreseeable project is "any future project where the applicant has devoted significant time and financial resources to prepare for any regulatory review should be considered as probable future projects for the purposes of cumulative impact." (Gray v. County of Madera (2008)). The stadium had not met these criteria when the analysis in this EIS/EIR was performed, and has not yet begun preparations for regulatory review. Should this change, Metro would coordinate Regional Connector construction activities with the construction and operation of the stadium in order to minimize impacts. This would apply to any nearby construction project entitled after completion of the EIS/EIR. Even if the stadium was reasonably foreseeable, it would not change the impact determinations in this EIS/EIR. Traffic management and construction mitigation is identified in Section 4.3.4 of the Draft EIS/EIR to

minimize disruption and limit construction activities during special events. This mitigation has been incorporated into Section 4.3.4.2 and the Mitigation Monitoring and Reporting Program for the Locally Preferred Alternative (Chapter 8) of this Final EIS/EIR. The ongoing project at 755 South Figueroa Street is a renovation of existing retail space, which does not involve an expansion or change of land use, which is a criteria used to compile Table 4.19-1 of the Draft EIS/EIR and this Final EIS/EIR. It is scheduled to be completed prior to the commencement of Regional Connector construction. The cumulative operational impacts of the renovation are not anticipated to differ substantially from those of the existing shopping center. However, the shopping center has been added to both Table 4.19-1 and Figure 4.19-1.

Response to Comment R-BU6-29

The Draft EIS/EIR identified a temporary construction easement across the referenced plaza during construction, after which the plaza would be returned to its pre-construction condition. This easement is shown in Table 4.2-5 and Appendix II, Conceptual Drawings for Build Alternatives Analyzed in the Draft EIS/EIR, of the Draft EIS/EIR and Table 4.2-5 and Appendix R-1, Locally Preferred Alternative Drawings, of the Supplemental EA/Recirculated Draft EIR Sections. Due to refinements made to the Locally Preferred Alternative since publication of the Supplemental EA/Recirculated Draft EIR Sections, the size of the proposed easement has been reduced, as shown in Table 4.2-5 and Appendix 1, Locally Preferred Alternative Drawings, of this Final EIS/EIR. Metro would keep entrances and exits clear of obstructions, and would ensure that adequate emergency ingress and egress routes are maintained at all times during construction, as indicated in Section 4.15.4.2.1 of this Final EIS/EIR and mitigation measure number SS-15 in the Mitigation Monitoring and Reporting Program for the Locally Preferred Alternative (Chapter 8 of this Final EIS/EIR). The Regional Connector would not interfere with an adopted emergency response plan or emergency evacuation plan, as analyzed in Section 4.15, Safety and Security, of the Draft EIS/EIR and this Final EIS/EIR. Section 4.15.1 of the Draft EIS/EIR and this Final EIS/EIR notes this CEQA guideline as part of the regulatory framework for analysis. Additional details about this analysis are provided in Appendix CC, Safety and Security Technical Memorandum, of the Draft EIS/EIR.

Response to Comment R-BU6-30

A 13,325 square foot easement is identified for all three alternatives in the parcel data tables in Appendix II, Conceptual Drawings for Build Alternatives Analyzed in the Draft EIS/EIR, of the Draft EIS/EIR. It is Metro's goal to minimize the use of private property. Consistent with this goal, refinements made since publication of the Draft EIS/EIR resulted in a reduction in the size of the proposed easement, to 10,233, as shown in Figure 4.2-5 and Appendix R-1, Locally Preferred Alternative Drawings, of the Supplemental EA/Recirculated Draft EIR Sections and Appendix 1, Locally Preferred Alternative Drawings, of this Final EIS/EIR. Since the Metro Board of Directors designated the Fully Underground LRT Alternative as the Locally Preferred Alternative on October 28, 2010, these project refinements have been focused solely on the Locally Preferred Alternative. Later refinements made to the Locally Preferred Alternative since publication of the Supplemental EA/Recirculated Draft EIR Sections reduced the size of the proposed easement to 1,019 square feet, as shown in Table 4.2-5 and Appendix 1, Locally Preferred Alternative Drawings, of this Final EIS/EIR. This further reduces the potential construction impacts of this easement below those identified in Section 4.18.3.4 of the Draft EIS/EIR and this Final EIS/EIR.

Response to Comment R-BU6-31

The reduced size of the construction staging area across parcel APN 5151-018-017 is reflected in Table 4.2-5 and Appendix 1, Locally Preferred Alternative Drawings, of this Final EIS/EIR as a refinement made since publication of the Supplemental EA/Recirculated Draft EIR Sections. This represents the minimum amount of off-street space needed in this location to provide adequate staging and access for excavation activities in the vicinity of 5th and Flower Streets. A construction staging area has been identified on a portion of the other open plaza in this area (APN 5151-023-400), as shown in Table 4.2-5 and the parcel data table in Appendix R-1, Locally Preferred Alternative Drawings, of the Supplemental EA/Recirculated Draft EIR Sections and Appendix 1, Locally Preferred Alternative Drawings, of this Final EIS/EIR, and Table 4.2-5 and Appendix II, Conceptual Drawings for Build Alternatives Analyzed in the Draft EIS/EIR, of the Draft EIS/EIR and this Final EIS/EIR. This easement has also been reduced since publication of the Supplemental EA/Recirculated Draft EIR Sections. All other properties along the alignment in the vicinity of 5th and Flower Streets are occupied by aboveground structures or precluded from use by Section 4(f) of the USDOT Act of 1966, thus rendering them unsuitable for temporary construction easements. Construction staging is also proposed farther north along Flower Street in the vicinity of 2nd/Hope Station, in addition to the two easements at 5th and Flower Streets.

Response to Comment R-BU6-32

The reduced construction easement has been incorporated as part of the Locally Preferred Alternative, as shown in Table 4.2-5 and Appendix 1, Locally Preferred Alternative Drawings, of this Final EIS/EIR. This is a smaller easement with fewer impacts than the one identified in the Draft EIS/EIR and the Supplemental EA/Recirculated Draft EIR Sections. The Draft EIS/EIR and the Supplemental EA/Recirculated Draft EIR Sections analyzed the worst-case construction easement scenario, and these impacts have been reduced due to refinements made to the Locally Preferred Alternative since their publication.

Response to Comment R-BU6-33

Visual and aesthetic impacts associated with construction of the Regional Connector project are discussed in Section 4.4, Visual and Aesthetic Impacts, of the Draft EIS/EIR and this Final EIS/EIR and were analyzed in accordance with NEPA and CEQA guidelines. No significant visual and aesthetic impacts would occur for the Locally Preferred Alternative.

Response to Comment R-BU6-34

The comments in this list are addressed individually in the responses below.

Response to Comment R-BU6-35

The 1,019 square foot easement adjacent to Flower Street would still allow the plaza to function as a meeting place and lunch area as described in the comment. The size of the easement has been reduced since publication of the Supplemental EA/Recirculated Draft EIR Sections, where a 10,233 square foot easement was proposed. The reduced easement has been incorporated into the Locally Preferred Alternative as shown in Table 4.2-5 and Appendix 1, Locally Preferred Alternative Drawings, of this Final EIS/EIR. Owner preference not to have a construction staging area on or adjacent to the property is noted. It is Metro's goal to minimize construction impacts

and the use of public property, and the reduction in size of the proposed easement is a step in that direction. The recommendation to remove the stairwell from the temporary construction easement is noted. Metro would ensure that adequate Americans with Disabilities Act (ADA) access is provided.

Response to Comment R-BU6-36

Please see Response to Comment R-BU6-27 for information regarding the range of alternatives studied, and how they differ in the area adjacent to the owner's property. As shown in Figure 2-14 and Appendix R-1, Locally Preferred Alternative Drawings, of the Supplemental EA/Recirculated Draft EIR Sections (Figure 2-16 and Appendix 1, Locally Preferred Alternative Drawings, of this Final EIS/EIR), the Flower Street alignment from 4th Street northward would be constructed by tunnel boring machine so as to minimize the extent of cut and cover construction. Construction staging areas from 4th Street northward would not allow the necessary access to the Flower Street cut and cover excavation areas. As such, temporary construction easements south of 4th Street, in the vicinity of the 5th and Flower intersection are needed.

Response to Comment R-BU6-37

Decking of the construction area is a necessary component of cut and cover construction to maintain vehicular and pedestrian access throughout construction. Any decking configurations would be designed to accommodate the undercarriage and overhead clearances of vehicles using the driveways, garages, and loading docks. Any decking configurations would require construction of ADA-compliant ramps and accesses, as well as modifications to vehicular access points to the garages and driveway along Flower Street, as indicated in Section 4.15.4.2.1 of this Final EIS/EIR and Section 4.18.2.5.1 of the Supplemental EA/Recirculated Draft EIR Sections and this Final EIS/EIR. As part of mitigation for pedestrian circulation impacts during construction, safe pedestrian detours with handrails, fences, K-rail, canopies, and walkways shall be provided as needed. Refer to Section 3.4.2 and Chapter 8 of this Final EIS/EIR for mitigation measures identified to reduce construction-related impacts, to the extent feasible, to traffic, transit, bicycle, and pedestrian circulation.

Preference for flush decking is noted. Decking configurations will be determined during the final design phase of the project, based on cost, schedule, and construction activity phasing considerations.

Response to Comment R-BU6-38

As stated in Section 3.4.1.4 of the Draft EIS/EIR, Section 3.4.2 of this Final EIS/EIR, and mitigation measure number TR-1 in the Mitigation Monitoring and Reporting Program for the Locally Preferred Alternative (Chapter 8 of this Final EIS/EIR), access to businesses would be maintained during business operating hours throughout construction. Request for compensation is noted, but no businesses would lose access, including the parking garage. The Uniform Relocation Assistance and Real Property Acquisition Policies Act of 1970 provides compensation for takings and easements, as well as relocation for any displaced businesses and residents. No displacements, takings, or easements would occur on the referenced property; therefore, the Uniform Act would not apply. Both automobile and pedestrian access would be maintained. As indicated in mitigation measure numbers CN-1 and CN-7 in the Mitigation

Monitoring and Reporting Program for the Locally Preferred Alternative (Chapter 8 of this Final EIS/EIR), signage shall be provided should detours be needed in the vicinity of the garage.

Response to Comment R-BU6-39

Traffic impacts associated with construction of the Regional Connector project are discussed in Chapter 3, Transportation Impacts and Mitigation, of this Final EIS/EIR. As indicated in Chapter 3, construction-related impacts to traffic, transit, bicycle, and pedestrian circulation would be significant and adverse. Mitigation measures, such as maintenance of traffic flow, maintenance of access to adjacent businesses and residences via existing or temporary driveways, and development of Worksite Traffic Control Plans, have been identified to reduce construction-related impacts. However, even with implementation of mitigation, construction-related impacts to traffic, transit, bicycle, and pedestrian circulation would remain significant, adverse, and unavoidable.

Any temporary roadway configurations needed during construction will be reviewed in coordination with LADOT for compliance with roadway standards and will be designed to meet vehicle standards, which would ensure the protection of people and property. Any decking configurations would be designed to accommodate the undercarriage and overhead clearances of vehicles using the driveways, garages, and loading docks. Metro would coordinate with garage owners to minimize inconvenience and queuing as a result of construction activities.

Response to Comment R-BU6-40

Mitigation measure number CN-7 in the Mitigation Monitoring and Reporting Program for the Locally Preferred Alternative (Chapter 8 of this Final EIS/EIR) states that barriers would be enhanced with culturally-relevant artwork, attractive design features, and advertisements for parking locations and businesses where possible. Mitigation measure number AQ-15 states that Metro will attempt to limit construction activity that affects traffic flow to off-peak hours. Daytime construction activities will be necessary to minimize noticeable vibration at nighttime as indicated in mitigation measure number NV-7. The request to begin construction no earlier than 2014 is noted.

Response to Comment R-BU6-41

Metro appreciates the owner's support. Construction impacts and mitigation are adequately analyzed in the Section 4.18, Construction Impacts, of the Draft EIS/EIR and this Final EIS/EIR, as indicated in the preceding responses to comments above. All significant impacts and adverse effects of the project have been analyzed and disclosed, and adequate mitigation measures to address these impacts have been incorporated into the project in accordance with NEPA and CEQA. As shown in Table 4.2-5 and Appendix 1, Locally Preferred Alternative Drawings, of this Final EIS/EIR, the proposed temporary construction easement across parcel APN 5151-018-017 has been reduced in size since publication of the Supplemental EA/Recirculated Draft EIR Sections. All comments in this letter are adequately addressed in the responses above.

Re: Regional Connector Transit Corridor Project – Supplemental Draft Environmental Impact Statement/Environmental Impact Report

Dear Ms. Roybal Saltarelli and Mr. Tellis:

We are writing on behalf of our client, Japanese Village, LLC, regarding the Supplemental Environmental Assessment/Recirculated Draft Environmental Impact Report (RDEIR) for the Regional Connector Transit Corridor Project (Project) published on July 22, 2011. Metro published this document after substantial changes were made to the Project's alignment after the Draft EIS/EIR's original publication in 2010, including a new impact to Japanese Village Plaza by proposing to tunnel under its buildings. Though our client and Metro staff spent several months in an effort to identify the impacts of this new route on our client's property, Metro advised in June that it was unable to provide detailed information to Japanese Village Plaza about the depth and location of the proposed tunnel. Accordingly, as detailed in our letter dated July 1, 2011, to Mr. Ronald Stamm, which is attached as Attachment C, recirculation was required under CEQA and NEPA because Metro's changes to the alignment after the Draft EIS/EIR was published eliminated the public's opportunity to comment on these changes, which would violate both NEPA and CEQA. In an apparent attempt to correct this deficiency, Metro has now revised select sections of the Draft EIS/EIR, and republished them as a RDEIR. Despite Metro's effort to cure these deficiencies, this environmental review process continues to be permeated with errors and deficiencies under both NEPA and CEQA, and does not respond to or resolve the points raised in our July 1, 2011, letter, which is incorporated herein by this reference.

1

While Japanese Village continues to have concerns about the RDEIR's evaluation of impacts to Japanese Village Plaza and the surrounding Little Tokyo community, Japanese Village Plaza's ownership continues to be a strong supporter of safe and reliable public transit that is compatible with the surrounding community. Japanese Village also appreciates Metro's outreach efforts in the Little Tokyo community to explore alternatives and mitigation measures for the impacts identified through its environmental review. It is essential, however, that the environmental review process be correct and accurate for the project to move forward. 1 cont'd

One key error is that the RDEIR incorrectly defines the impacts to Japanese Village Plaza as an easement, as opposed to a partial take of the property. While Metro anticipates tunneling under large portions of Japanese Village Plaza, it will be doing so at a much shallower depth than anywhere else along the alignment outside of a public right-of-way. As the alignment passes under Japanese Village Plaza it will be between only approximately 20 and 25 feet below grade, and only 13 to 15 feet below its existing foundations. In comparison, when the tunnel passes beneath the Broad Museum, it will be over 50 feet below grade. The consequence of this is to restrict substantially the future development options at Japanese Village Plaza. These impacts are not addressed in the RDEIR. Also, as set forth in the letter from GeoDesign Inc. (Attachment C) developing such a shallow tunnel under Japanese Plaza's existing multi-story parking garage presents unique impacts to the existing structures that are not adequately addressed. 2

In summary, and as set forth in detail in Attachment B, neither the Draft EIS/EIR nor the RDEIR adequately: (1) describe the Project so that it can be understood by the reader; (2) present the full scope of impacts from Metro's massive building campaign and piecemeal the project's impacts; (3) describe potential mitigation measures that would reduce the Project's significant impacts; or (4) analyze the Project's significant environmental impacts. The public deserves a complete and comprehensible description of the Project and its alternatives, an accurate analysis of the environmental impacts involved, and proposed mitigation to fully address the Project's significant impacts. 3

We appreciate your consideration of these issues. Please do not hesitate to contact me should you wish to discuss these matters further at (213) 485-1234.

Very truly yours,

Robert D. Crockett

Attachment A

ATTACHMENT A

The RDEIR Still Fails To Provide A Proper Project Description

The RDEIR's project description remains fundamentally flawed because it provides a range of development options that misleads the public and obscures the Project's actual environmental impacts from meaningful review. For an environmental document to evaluate the environmental ramifications of a project adequately, it must first provide an accurate description of the project itself. "[A]n accurate stable and finite project description is the sine qua non of an informative and legally sufficient EIR." (*County of Inyo v. City of Los Angeles* (1977) 71 Cal.App.3d 185, 193.) Furthermore "[a]n accurate project description is necessary for an intelligent evaluation of the potential environmental effects of a proposed activity." (*Silveira v. Las Gallinas Valley Sanitary District* (1997) 54 Cal.App.4th 980, 990 (citation omitted).)

4

While extensive detail in a project description is not always necessary, CEQA mandates that an EIR describe a proposed project with sufficient detail and accuracy to permit informed decision making. (See CEQA Guidelines, § 15124.) Thus, where a project description is inaccurate or misleading, a CEQA document's analysis of significant environmental impacts is rendered inherently unreliable. As discussed below, the DEIR fails to meet this basic standard.

Here, the RDEIR provides a complicated set of distinct "alternatives" and explains that any one of these options could be the ultimate Project approved. (RDEIR at 2-8 to 2-35.) However, there appears to be no legitimate reason why, at this point, Metro could not have designated the "Fully Underground LRT Alternative" as the Project being proposed. The RDEIR admits that "[o]n October 28, 2010, the Metro Board of Directors concurred with staff's recommendation to designate the Fully Underground LRT Alternative as the [Locally Preferred Alternative]." (RDEIR at 2-29.) Despite this designation occurring almost one year ago, the "Fully Underground LRT Alternative" is buried as the fifth option presented in the RDEIR's "Alternatives Considered" section. This requires the reader to wade through the document's discussions of four completely different "alternatives" that Metro appears to have no intention of approving.

5
